Foreword

Revenue Statistics in Latin America and the Caribbean 2024 is a joint publication by the Organisation for Economic Co-operation and Development (OECD) Centre for Tax Policy and Administration, the OECD Development Centre, the United Nations Economic Commission for Latin America and the Caribbean (UN - ECLAC), the Inter-American Center of Tax Administrations (CIAT) and the Inter-American Development Bank (IDB), with financial support from the Spanish Agency for International Development Cooperation (AECID). It presents detailed, internationally comparable data on tax revenues for 27 Latin American and Caribbean (LAC) economies, four of which are OECD members.

Revenue Statistics in Latin America and the Caribbean 2024 is based on the well-established classification of revenues set out in the OECD Interpretative Guide. In this publication, the term “taxes” is confined to compulsory, unrequited payments to general government. As outlined, taxes are “unrequited” in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments. The OECD methodology classifies a tax according to its base: income, profits and capital gains (classified under heading 1000); payroll (heading 3000); property (heading 4000); goods and services (heading 5000); and other taxes (heading 6000). Compulsory social security contributions paid to general government are treated as taxes and classified under heading 2000. Greater detail on the tax concept, the classification of taxes and the accrual basis of reporting is set out in the Interpretative Guide in Annex A.

Extending the OECD methodology to countries in Latin America and the Caribbean (LAC) enables comparisons of tax systems on a consistent basis across this region as well as with OECD countries and with all countries included in the *Global Revenue Statistics* database. In a few cases, this methodology differs from the approach used by UN-ECLAC, CIAT and IDB; these differences are noted in the text and in the tables.

The report provides an overview of the main taxation trends in the LAC region. It examines changes in the level and the composition of tax revenue plus the attribution of tax collection by sub-level of government between 1990 and 2022. The report includes two special features: the first examines fiscal revenues from non-renewable natural resources in the LAC region in 2022 and 2023; the second discusses equivalent fiscal pressure, a complementary revenue indicator for the LAC region.

Acknowledgements

Revenue Statistics in Latin America and the Caribbean 2024 was jointly produced by the Organisation for Economic Co-operation and Development (OECD) Centre for Tax Policy and Administration, the OECD Development Centre, the United Nations Economic Commission for Latin America and the Caribbean (UN - ECLAC), the Inter-American Center of Tax Administrations (CIAT) and the Inter-American Development Bank (IDB). This publication benefited from the financial support of the Spanish Agency for International Development Cooperation (AECID) in the framework of the activities aimed at improving fiscal systems in Latin America and the Caribbean (LAC).

The staff from these organisations with responsibility for producing the publication were: Emmanuelle Modica of the OECD Centre for Tax Policy and Administration, under the supervision of the Director, Manal Corwin, the Deputy Director David Bradbury, the Acting Head of the Tax Policy and Statistics Division Kurt Van Dender, and the Acting Head of the Tax Data and Statistical Analysis Unit, Alexander Pick; Jingjing Xia and René Orozco of the OECD Development Centre, under the supervision of the Director, Ragnheiður Elín Árnadóttir, Deputy Director Federico Bonaglia, and the Head of the Latin America and the Caribbean Unit, Sebastian Nieto Parra; Michael Hanni of the Economic Development Division of UN-ECLAC, under the supervision of Director Daniel Titelman and the Chief of the Fiscal Affairs Unit, Noel Pérez Benítez; Julio Alberto López from the CIAT Tax Studies and Research Directorate, under the supervision of Director Santiago Díaz de Sarralde; and Alejandro Rasteletti, Lead Specialist and Knowledge Coordinator at the IDB Fiscal Management Division at the IDB and Ubaldo González de Frutos, Sector Lead Specialist in Tax Administration. Michael Hanni of UN-ECLAC authored the special feature on fiscal revenues from non-renewable natural resources in the LAC region (Chapter 2); Santiago Díaz de Sarralde and Dalmiro Morán of CIAT, with inputs by Alejandro Rasteletti of IDB, authored the special feature on the equivalent fiscal pressure in the LAC region based on a report by Dalmiro Morán and Marco Solera (Chapter 3).

The authors would like to thank other staff at the OECD Development Centre and the Centre for Tax Policy and Administration for their invaluable support in completing and enhancing the 2024 edition of this publication. Karena Garnier and Antonia Vanzini from the OECD Centre for Tax Policy and Administration, Delphine Grandrieux and Elizabeth Nash from the OECD Development Centre's Communications and Publications team, and Damian Garnys from the OECD Directorate for Communications, ensured the production of the publication, in both paper and electronic form. Michael Sharratt from the OECD Centre for Tax Policy and Administration provided invaluable assistance with the databases, website and other dissemination tools. Nicolas Miranda from the OECD Centre for Tax Policy and Administration and Laura Gutierrez of the OECD Development Centre provided precious help in proof-reading the Spanish content. The authors would also like to thank Ivonne González and Elisa Araneda from the Economic Development Division of UN-ECLAC for translating the special feature on fiscal revenues from non-renewable natural resources in the LAC region.

Finally, the OECD Centre for Tax Policy and Administration and the OECD Development Centre would like to thank our colleagues working in national entities, with whom we have consulted regularly in preparing this report. In particular, we are grateful to Eduardo Rodriguez from the Ministry of Finance of Argentina;

Fidelia Raulina Pérez Castillo and Mariam Ortiz from the Dominican Republic's Finance Ministry; Luis Alberto Canjura Vásquez, from the Ministry of Finance of El Salvador; David Fernando Pineda Pinto from the Revenue Administration Service and Kervin Andre Sánchez Valle and Neffy Noel Velásquez Sagastume from the Secretary of Finances in Honduras; Andrea Gregory from Jamaica's Tax Administration and Customs agencies; Emma Isaza from Panama's Finance Ministry; and Óscar Gustavo Núñez Del Arco Mendoza and Jorge Rivera Calderón from Peru's Ministry of Economy and Finance.

Executive summary

Between 2021 and 2022, tax-to-GDP ratios increased in more than three quarters of countries in Latin America and the Caribbean (LAC), while the average tax-to-GDP ratio for the LAC region rose by 0.3 percentage points (p.p.) to 21.5%, still slightly below its pre-pandemic level (21.6%). The increase in the regional average was driven by corporate income tax (CIT) amid higher profits by oil companies, although this was partially offset by a decline in revenue from excises, due to lower demand as well as the adoption of a range of policy measures by countries to mitigate the impact of energy and food inflation on households and firms.

Revenue Statistics in Latin America and the Caribbean 2024 provides internationally comparable data on tax levels and tax structures for 27 LAC countries: Antigua and Barbuda, Argentina, the Bahamas, Barbados, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, the Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, Saint Lucia, Trinidad and Tobago, Uruguay and Venezuela. The LAC average represents the unweighted average of 26 countries included in this publication, excluding Venezuela due to data issues.

In this publication, “taxes” are defined as compulsory, unrequited payments to general government. Compulsory social security contributions (SSCs) paid to general government are classified as taxes. More information on the tax classification is set out in the Interpretative Guide in Annex A.

Tax-to-GDP ratios in the LAC region in 2022

Tax-to-GDP ratios ranged from 10.6% in Guyana to 33.3% in Brazil in 2022. Against a backdrop of an ongoing recovery from the COVID-19 shock and high commodity prices, tax-to-GDP ratios increased in twenty countries between 2021 and 2022 and declined in six.

The largest increases were observed in Chile (whose tax-to-GDP ratio rose by 1.7 p.p.), the Bahamas (1.6 p.p.) and Ecuador (1.5 p.p.). The increase in Chile was mainly driven by higher CIT revenue, while growth in tourism in the Bahamas led to strong VAT receipts. In Ecuador, the increase was driven by the oil sector and the introduction of taxes on net wealth. The largest decreases in 2022 occurred in Caribbean countries, as strong GDP growth in this sub-region outpaced the rise in tax revenue, particularly in Guyana, where the tax-to-GDP ratio fell by 6.3 p.p. between 2021 and 2022.

In 2022, revenue from CIT increased by 0.6 p.p. on average across the LAC region from the previous year while revenue from personal income tax (PIT) was unchanged as a share of GDP. Meanwhile, revenue from taxes on goods and services declined by 0.3 p.p. Within this category, revenue from excises fell by 0.4 p.p. as sharp increases in the cost of essential items caused demand to fall and prompted governments to reduce taxes (mostly on fuel products). In contrast, VAT revenues remained unchanged in 2022 relative to 2021.

Average tax-to-GDP ratios in the Caribbean, Central America & Mexico and South America stood at 21.7%, 19.4% and 23.5% respectively in 2022. Tax revenue increased by 1.0 p.p. and 0.3 p.p.

respectively in South America and in Central America & Mexico, while the Caribbean's tax-to-GDP ratio decreased by 0.6 p.p. If Guyana is excluded, the Caribbean's average tax-to-GDP ratio rose by 0.2 p.p.

Evolution of tax-to-GDP ratios in the LAC region since 1990

The average tax-to-GDP ratio for the LAC region rose by 6.9 p.p. between 1990 and 2022 largely due to increases in revenue from VAT and from taxes on income and profits (of 3.8 p.p. and 3.1 p.p., respectively). The gap between the LAC and OECD average tax-to-GDP ratios narrowed over this period, from 16.2 p.p. in 1990 to 12.5 p.p. in 2022, although it has widened since 2010. On average, South America's tax-to-GDP ratio recorded the strongest growth among the sub-regions between 1990 and 2022.

Tax structures in the LAC region

In 2022, taxes on goods and services generated almost half of total tax revenue in the LAC region, compared with less than a third in the OECD (31.9% in 2021, the latest year available). VAT was the principal source of this revenue in the LAC region in 2022, accounting for 28.3% of total tax revenue on average and amounting to 6.1% of GDP.

On average, taxes on income and profits accounted for 30.1% of total tax revenue in the LAC region in 2022. CIT and PIT revenue accounted for 18.8% and 9.2% respectively of total tax revenue, compared with 10.2% and 23.7% in the OECD (2021 figures). The average share of SSCs in total tax revenue was 16.7% in the LAC region in 2022, below the OECD average of 25.6% (2021 figure).

Environmentally related tax revenue (ERTR) amounted to 0.8% of GDP on average in 2022 in the 23 LAC countries for which data are available, below the OECD average of 1.9%. ERTR in the LAC region was derived principally from taxes on energy, most commonly excises on diesel and petrol (0.5% of GDP on average). A reduction in energy-related tax revenue was behind the decline in ERTR of 0.1 p.p. between 2021 and 2022.

Special feature: Trends in fiscal revenues from non-renewable natural resources

Hydrocarbon-related revenue among major oil producers in the LAC region increased to 4.4% of GDP on average in 2022 from 2.6% of GDP in 2021 as oil prices surged in the first half of 2022 due to the impact of Russia's invasion of Ukraine and constrained global supply. Meanwhile, average revenue from mining increased from 0.7% of GDP in 2021 to 0.8% of GDP in 2022 despite weakening prices and lower production. In contrast, both hydrocarbon-related revenue and mining revenue fell as a share of GDP in 2023, to an estimated 3.9% and 0.5% of GDP respectively as oil and mineral prices trended down.

Special feature: Equivalent fiscal pressure in the LAC region

Equivalent fiscal pressure (EFP) is an indicator of the tax burden that complements the tax-to-GDP ratio by adding contributions to private social security systems and non-tax revenue from the exploitation of natural resources to tax revenue. On average, EFP was 1.7% of GDP higher than the LAC region's tax-to-GDP ratio in 2021. In Chile and Mexico, which recorded the largest revenues from these additional components, the EFP was 5.9% and 5.5% of GDP higher respectively than the countries' tax-to-GDP ratios in 2021.

1 Tax revenue trends, 1990-2022

Introduction

After a strong rebound in 2021 from the shock of the COVID-19 pandemic the previous year, growth slowed in many countries in Latin America and the Caribbean (LAC) in 2022. External conditions were less favourable, public transfers were rolled back, monetary policy tightened and the effects of the reopening of economies dissipated (OECD et al., 2023^[1]). Challenging socioeconomic conditions persisted, as poverty and extreme poverty in the region remained above pre-pandemic levels and inflation further eroded purchasing power. In 2022, 29% of the population was in poverty and 11.2% in extreme poverty in the LAC region (OECD et al., 2023^[1]).

Despite recent consolidation efforts, fiscal space remains limited in the LAC region. To fund their development programmes, governments in the region need to enhance the targeting of public spending and mobilise additional resources through higher borrowing and by increasing public revenues. Fairer and more efficient tax systems are required: low tax revenues in most LAC countries limit the state's capacity to respond to citizens' demands and improve public services. In addition, by rebalancing the tax structure away from a dependence on consumption taxes and corporate income tax and by promoting further progressivity in the personal income tax, the region could reduce inequalities and minimise distortions that constrain entrepreneurship (OECD et al., 2023^[1]). Tax reforms will also be needed to encourage a green and just transition (OECD et al., 2022^[2]). In many LAC countries, a stronger fiscal pact between government, citizens and the private sector is required to ensure that political support for these reforms is sustained throughout what is likely to be a long-term process (OECD et al., 2021^[3]).

Revenue Statistics in Latin America and the Caribbean 2024 provides a unique basis for such fiscal pacts. By providing internationally comparable data on tax revenues in 27 countries in the region, it serves both as a basis for countries' in-depth tax policy analysis and as a common starting point for knowledge sharing and capacity development across the LAC region. This chapter discusses the evolution of key tax indicators between 1990 and 2022, including the tax-to-GDP ratio, the tax mix and the share of tax revenue generated by different levels of government, as well as the efficiency of value-added tax in the region. It also analyses revenue from environmentally-related taxes. This analysis is complemented by special features on revenues from non-renewable natural resources (Chapter 2) and the equivalent fiscal pressure indicator (Chapter 3). Chapter 4 provides comparative tables for key tax indicators across the region, while Chapters 5 and 6 provide a detailed country-by-country breakdown of tax revenue.

Tax-to-GDP ratios: levels and annual changes in 2022

Tax-to-GDP ratios in 2022

The tax-to-GDP ratio measures tax revenue (including social security contributions paid to the general government) as a proportion of gross domestic product (GDP). The LAC average represents the unweighted average of 26 of the countries included in this publication; it excludes Venezuela due to a lack of data (see Box 1.1).

The average tax-to-GDP ratio in the LAC region was 21.5% in 2022 (Figure 1.1). The highest tax-to-GDP ratios were observed in Brazil (33.3%), Barbados (30.5%) and Argentina (29.6%), while the countries with the lowest tax-to-GDP ratio were Guyana (10.6%), Panama (13.1%) and Dominican Republic (13.9%). All countries in the LAC region recorded a tax-to-GDP ratio below the OECD average of 34.0% in 2022.¹

Figure 1.1. Tax-to-GDP ratios in the LAC region, 2022

Total tax revenues as percentage of GDP

Note: The classification of countries into different sub-regions follows ECLAC's classification and is based on the spoken language of countries. The "Caribbean" includes English-speaking countries and Guyana, while "Central America and Mexico" covers Spanish-speaking countries including Dominican Republic and Cuba.

The figures exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), The Bahamas, Barbados, Cuba, the Dominican Republic, Saint Lucia, Trinidad and Tobago, and Venezuela as data are not available.

1. Represents the unweighted average of the 38 OECD member countries. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38).

2. Represents the unweighted average of the 26 Latin American and Caribbean countries included in this publication, excluding Venezuela due to data availability issues.

Source : OECD et al. (2024^[4]), Table 4.1.

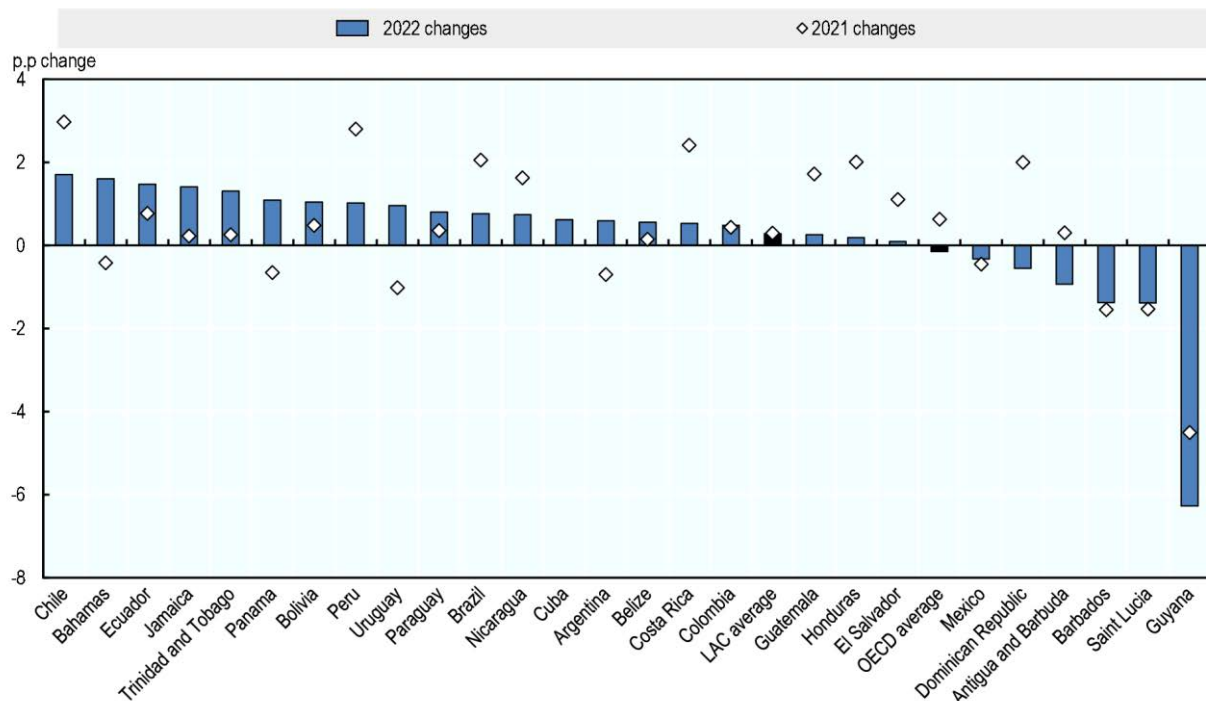

StatLink  <https://stat.link/enrchl>

In 2022, the average LAC tax-to-GDP ratio was 0.3 percentage points (p.p.) higher than in 2021 (21.3% of GDP). Changes in tax-to-GDP ratios between 2021 and 2022 varied across the region (Figure 1.2). Twenty countries recorded an increase in their tax-to-GDP ratio while six countries recorded a decline.

The increase in the tax-to-GDP ratio between 2021 and 2022 exceeded 1.0 p.p. in nine countries. Chile, The Bahamas and Ecuador recorded the largest increases, of 1.7p.p., 1.6 p.p. and 1.5 p.p. respectively. Over the same period, tax-to-GDP ratios in three LAC countries decreased by more than 1 p.p.: Guyana (6.3 p.p.), Barbados and Saint Lucia (both 1.4 p.p.). Although tax revenue grew strongly in nominal terms in these latter countries, their tax-to-GDP ratios declined between 2021 and 2022 because this growth was outpaced by the increase in nominal GDP (see Box 1.1).

Figure 1.2. Changes in tax-to-GDP ratios in the LAC region in 2021 and 2022

Year-on-year change, p.p.

Note: The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Venezuela due to data availability issues. The OECD average represents the unweighted average of the 38 OECD member countries. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38).

StatLink  <https://stat.link/s5ht0z>

Box 1.1. The tax-to-GDP ratio methodology

The tax ratios shown in this publication express aggregate tax revenue as a percentage of GDP. The value of this ratio depends on its denominator (GDP) and its numerator (tax revenue). Both the numerator and the denominator may be subject to historical revision. The tax-to-GDP needs to be treated with caution: nominal tax revenue and nominal GDP may change in the same direction (both increasing or both decreasing), but the tax-to-GDP ratio will go in the opposite direction over the same period if the change in nominal tax revenue is lower than the change in nominal GDP.

In 21 LAC countries, the reporting year coincides with the calendar year. The remaining six countries report on a fiscal year basis:

- The fiscal year in Barbados, Belize and Saint Lucia runs from April to March. This means that reporting year 2022 is Q2/2022-Q1/2023.
- The fiscal year in Trinidad and Tobago covers October to September. The reporting year 2022 spans Q4/2021-Q3/2022.
- The fiscal year for The Bahamas ends on 30 June. The reporting year 2022 runs from Q2/2021-Q2/2022.

The numerator (tax revenues)

This publication uses tax revenue figures that are submitted by focal points or published annually by national Ministries of Finance, tax administrations or statistics offices. Historical data are subject to revisions each year, with more important revisions in more recent years. Past figures may also change from one edition to the next when data are improved (for example, new data is obtained or classification is refined).

The denominator (GDP)

The GDP figures used in this publication are mainly sourced from the *World Economic Outlook* (WEO) published by the IMF. Using these GDP figures maximises consistency across countries, as well as international comparability. GDP figures are also revised and updated to reflect better data sources and improved estimation procedures, or to move towards new internationally agreed guidelines for measuring the value of GDP. The most recent available figures from the WEO were published in October 2023 (IMF, 2023^[5]) and include GDP revisions. The GDP figures for the four LAC countries that are also members of the OECD – Chile, Colombia, Costa Rica and Mexico – are based on the OECD Annual National Accounts.

Nominal GDP figures in this edition were revised from those shown in last year's edition for 13 countries. Of these, the GDP of 11 countries was revised upwards (in ascending order Costa Rica, Nicaragua, Paraguay, Colombia, El Salvador, Brazil, The Bahamas, Uruguay, Belize, Panama, and Saint Lucia). Saint Lucia recorded the largest revision, of 11.3%. The resultant difference between the tax-to-GDP ratio for 2021 shown in the 2023 and 2024 editions of this report ranged from -2.0 p.p. in Belize and Saint Lucia to +0.7 p.p. in Costa Rica.

The average tax-to-GDP ratio for the LAC region in 2021 shown in the 2023 edition of *Revenue Statistics in Latin America and the Caribbean* was 21.7%. In this year's edition, it is 0.4 p.p. lower, at 21.3%, primarily because of the GDP revisions mentioned above. The increase in the LAC region's tax-to-GDP ratio between 2020 and 2021 has also been revised downwards, from 0.8 p.p. in the 2023 edition to 0.3 p.p. in this edition. The difference in the average-tax-to-GDP ratio for 2021 between the two editions is also due (to a lesser extent) to the inclusion of Cuba in the LAC average from 2021 in this year's edition. A monetary reform implemented in 2021 significantly altered Cuba's tax structure as well the level and relative weight of its tax and non-tax revenue. Cuba is only included in the LAC average from 2021 onwards because revenue data prior to 2021 is not comparable with data subsequent to the reform. (OECD et al., 2023^[6])

Major changes in tax-to-GDP ratios in LAC countries in 2022

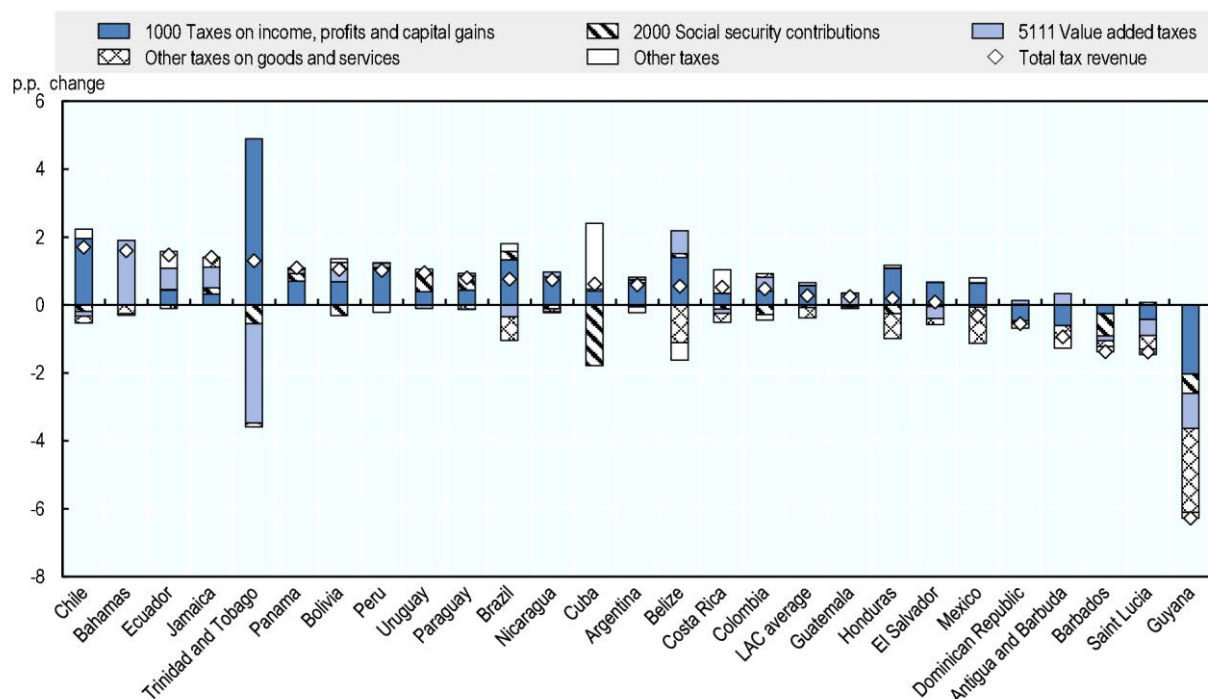

In 2022, the LAC region faced a challenging macroeconomic backdrop. Regional growth slowed to 4.0% in real terms from 7.0% in 2021. Inflation rose strongly in 2022 due partly to external factors such as trade disruptions and supply bottlenecks caused by the pandemic and compounded by Russia's invasion of Ukraine, which further affected commodity prices. As elsewhere in the world, governments in the LAC region implemented measures to mitigate the inflationary pressures on households and firms (see Box 1.2) (OECD et al., 2023^[1]).

Against this backdrop, tax revenue grew as a percentage of GDP in most countries but these increases tended to be weaker than those observed in 2021. This section examines in greater detail the largest changes in tax-to-GDP ratios in LAC countries in 2022 relative to 2021. Two main factors explain the higher tax-to-GDP ratios in 2022: economic growth and higher prices and production levels in the oil and mineral sector, which led to higher tax revenue from non-renewable natural resources (see Chapter 2 (ECLAC, 2022^[7])). However, measures to mitigate inflation resulted in lower revenue from consumption taxes.

- Chile recorded the largest increase in its tax-to-GDP ratio among LAC countries in 2022, at 1.7 p.p. The increase was primarily driven by a rise of 1.9 p.p. in revenue from corporate income tax (CIT) as the economy recovered from the impact of COVID-19.
- The Bahamas experienced the second-largest rise in tax revenue as a percentage of GDP (1.6 p.p.) amid an economic recovery, particularly in the tourism sector. The increase was driven by revenue from value-added tax (VAT), which rose by 1.9 p.p. in 2022 relative to 2021 even though the statutory VAT rate was reduced from 12% to 10% in January 2022 (ECLAC, 2023^[8]).
- Ecuador's tax-to-GDP ratio recorded the third-largest increase between 2021 and 2022, of 1.5 p.p. Increases in revenue cut across different tax types: income tax, VAT, and property tax revenues (the latter shown in "other taxes" in Figure 1.3) increased by 0.4 p.p., 0.6 p.p., and 0.5 p.p., respectively. As well as benefiting from a stronger economic performance and high oil prices, Ecuador introduced measures to temporarily tax net wealth from individuals and companies, and it also improved the efficiency of its tax collection (IMF, 2022^[9]).
- In Trinidad and Tobago, the tax-to-GDP ratio rose by 1.3 p.p. between 2021 and 2022. CIT revenue rose by 5.5 p.p. over the period due to a surge in oil and natural gas prices. This increase was partly offset by a drop in VAT revenue of 2.9 p.p. in 2022 relative to 2021, partly explained by enhanced VAT refunds (Ministry of Finance Trinidad and Tobago, 2022^[10]).

Figure 1.3. Changes in tax-to-GDP ratios in LAC countries by main tax heading, 2022

Year-on-year change, p.p.

Note: The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Venezuela due to data availability issues.

Source: Authors' calculations based on OECD et al. (2024^[4]), Chapter 4.

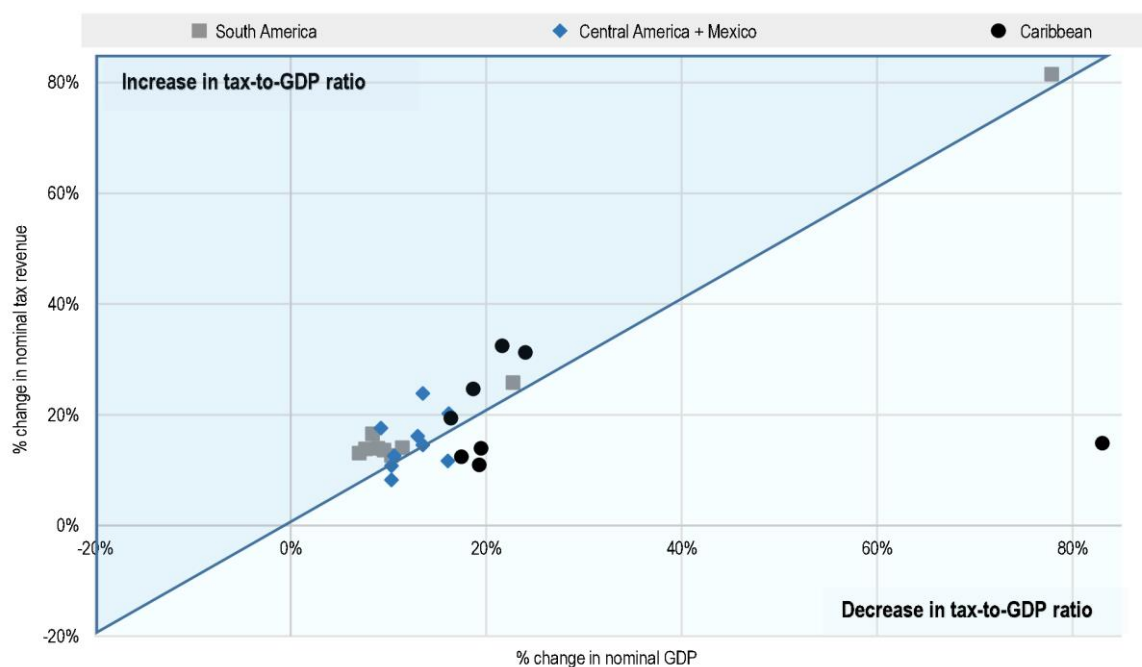

StatLink  <https://stat.link/suxmp3>

Six countries in the LAC region experienced a decline in their tax-to-GDP ratio between 2021 and 2022; in each case, the decrease was the result of nominal tax revenue increasing by less than nominal GDP. The largest declines occurred in four Caribbean countries: Guyana recorded the largest decline (of 6.3

p.p.), followed by Barbados and Saint Lucia (both 1.4 p.p.), and Antigua and Barbuda (0.9 p.p.) (Figure 1.4).

Guyana recorded an increase in nominal GDP of 83% (63% in real terms) between 2021 and 2022 while nominal tax revenue rose by 15% over the same period. GDP growth in Guyana was the highest in the world in 2022, resulting from strong growth in oil production and high oil prices. Several tax reforms contributed to the slower growth in tax revenue, including an increase in the value of personal income tax (PIT) thresholds to benefit lower-income households, the reduction and then removal of excise taxes on gasoline and diesel to mitigate high energy prices, and the calculation of customs duties, excise tax and VAT based on pre-pandemic freight costs for importers facing high shipping prices (ECLAC, 2023^[11]).

Figure 1.4. Changes in nominal tax and nominal GDP by sub-regions, 2021-2022

Note: The diagonal line across the graph represents the point at which the change in tax revenues and in GDP were of the same magnitude and therefore the point at which the tax-to-GDP ratio remained unchanged. Countries above the diagonal line had increases in their tax-to-GDP ratios; countries below it had falls.

StatLink  <https://stat.link/o245sz>

Changes in tax revenues from different tax types in 2022

Increases in tax revenue across the LAC region in 2022 were driven by CIT, which was supported in a number of countries by high commodity prices. In contrast, revenue from taxes on goods and services contracted in 2022 amid high inflation and rising credit costs that affected households' purchasing power and led to a fall in private consumption. In addition, revenue from taxes on goods and services fell as a result to the adoption of measures to mitigate a surge in energy prices.

CIT revenue increased by 0.6 p.p. on average across the LAC region between 2021 and 2022. High oil and gas prices in 2021 strengthened companies' profits in 2022, especially in oil-producing countries. In contrast, revenue from PIT remained unchanged as a percentage of GDP over the same period despite

an increase in wages due to inflation. Revenue from social security contributions (SSCs) decreased by 0.1 p.p. in 2022. (Table 1.1).

Within taxes on goods and services, VAT revenue was unchanged as a percentage of GDP between 2021 and 2022. Over the same period, revenue from other consumption taxes (OCT), which include excises, customs and imports duties, and non-VAT general taxes (such as sales taxes), decreased by 0.3 p.p. Falls in OCT revenue were driven by a decline of 0.4 p.p. in excise revenue, which was mainly due to cuts in fuel taxes by several countries in response to higher prices (see Box 1.2).

Table 1.1. Changes in tax revenues by main tax categories, 2021 and 2022

Year-on-year change, p.p.

	2021	2022
PIT	-0.1	0.0
CIT	0.1	0.6
SSCs	-0.2	-0.1
VAT	0.2	0.0
OCT	0.0	-0.3
Res.	0.1	0.1
Total tax	0.3	0.3

Note: The LAC averages represent the unweighted average of 26 LAC countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data issues. In addition, the PIT and CIT averages exclude Ecuador due to data quality issues.

Tax-to-GDP ratios in LAC sub-regions

This report examines trends in tax revenue across three sub-regions: Central America and Mexico; the Caribbean; and South America. Average tax-to-GDP ratios in Central America and Mexico and South America increased for the second consecutive year in 2022 reaching 19.4% and 23.5% respectively while the Caribbean's tax-to-GDP ratio decreased (also for the second year) to 21.7%. South America and Central America and Mexico recorded an increase of 1.0 p.p. and 0.3 p.p., respectively between 2021 and 2022, while the Caribbean's tax-to-GDP ratio declined by 0.6 p.p. over the period.

Tax revenue and GDP both increased in nominal terms in all three sub-regions in 2022. However, for four of the eight Caribbean countries included in the report, GDP increased by more than tax revenue, leading to lower tax-to-GDP-ratios for these countries and for the Caribbean on average (Figure 1.4). This is particularly the case for Guyana, whose sharp decline in the tax-to-GDP ratio is discussed in the previous section; if Guyana is excluded, the Caribbean's average tax-to-GDP ratio increased by 0.2 p.p. in 2022.

GDP growth in the Caribbean region was particularly strong in 2022, growing by 13.1% in real terms in 2022, driven largely by the tourism sector. Nominal tax revenue in the Caribbean also increased, especially from VAT and taxes from international transactions (ECLAC, 2023^[8]). Latin America's GDP grew at a slower rate, at 3.9% in real terms. As shown in Figure 1.4, all Caribbean countries in this publication recorded growth in nominal GDP of 16% or more between 2021 and 2022 while all but four Latin American countries recorded growth below this level.

Box 1.2. The tax policy response to inflation

In 2022, prices on energy and food surged internationally, a tendency exacerbated by Russia's invasion of Ukraine, causing difficulties for firms and households, especially those with low incomes (OECD et al., 2022^[2]). In response, governments in the LAC region adopted a wide range of measures, including subsidies and transfers to households and businesses or price support measures, to reduce the impact of higher international prices on consumers. The price support measures included price controls and reductions or exemptions of taxes on goods and services, such as VAT and excises.

According to an IMF survey of 22 LAC countries, half of the measures adopted in the LAC region related to energy products, and most of them related to fuel (Amaglobeli et al., 2023^[12]). Temporary reductions in excise taxes on petroleum products were the most frequently introduced measure, followed by decreases in the VAT/GST rate on fuel products, and in import duties to a lesser extent.

Countries that reduced excises on fuel included Belize, Brazil, Guyana, Honduras, Mexico and Peru:

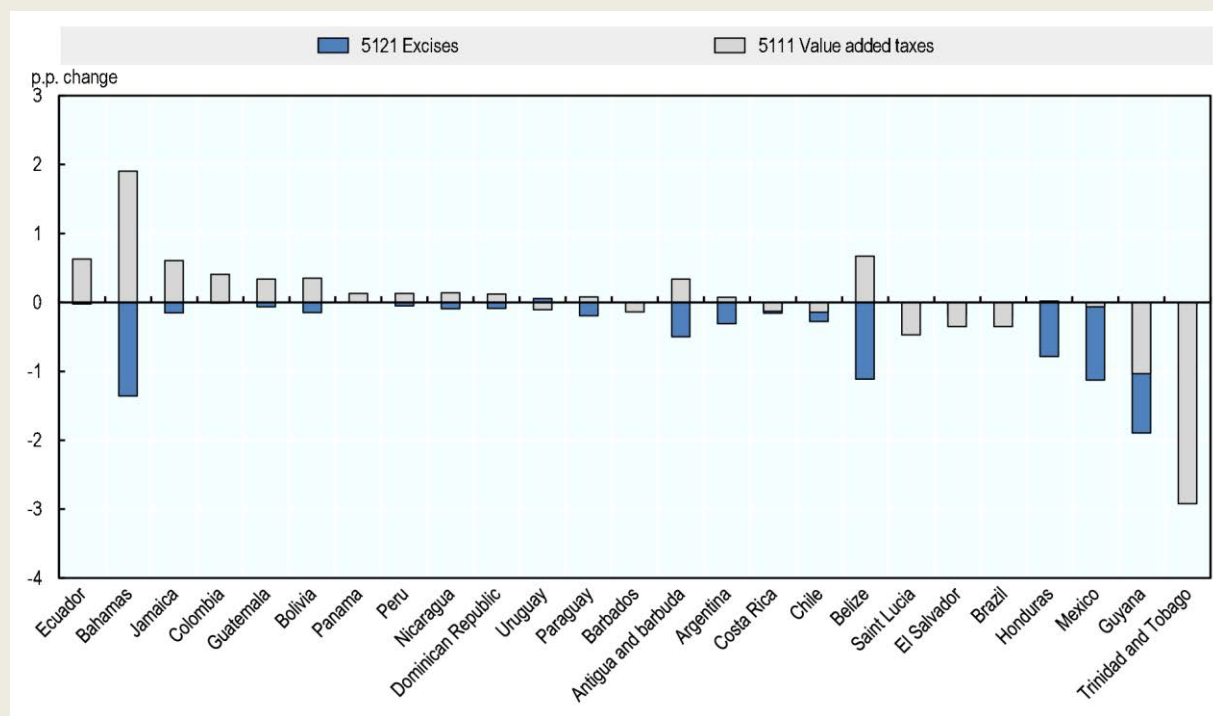

- In Belize, tax cuts on fuel were implemented in April 2022; these reduced the excise tax on diesel and gasoline by 100% and 77% respectively (Government of Belize, 2022^[13]).
- Brazil reduced rates of the Contribuição sobre Intervenção do Domínio Econômico (best known as CIDE) levied on imports and retail sale of gasoline, diesel fuel, fuel oil, aviation kerosene, LPG, other petroleum products and ethanol fuel (OECD, 2024^[14]).
- Honduras reduced petrol and diesel prices, leading to a decline in revenue from the levy on fuel sales (called the contribution for social programmes and conservation of road assets). In addition, the government reduced taxes on imports of gasoline (by around 30%) and diesel (by around 50%) (ECLAC, 2023^[8]; OECD, 2024^[14]).
- Mexico introduced a tax credit on fuel excise duties, which fuel importers and producers could use to offset monthly CIT or VAT payments (OECD, 2022^[15]).
- Gasoline and diesel, as well as selected goods that make up the basic family basket, were exempted from the excise tax in Peru (OECD, 2024^[14]).

Some countries made changes to VAT, including Barbados, Brazil, Costa Rica, Guyana, Honduras and El Salvador:

- Barbados put a cap on VAT on gas and diesel (in US dollars) for six months (OECD, 2022^[15]).
- A VAT exemption for electricity purchases intended for distribution was introduced by Costa Rica (OECD, 2022^[15]).
- El Salvador temporarily reduced the VAT rate on fuels from April 2022 (OECD, 2022^[15]).
- Honduras extended the discount on freight costs when calculating the VAT base on imports up to June 2022 (OECD, 2022^[15]).

Figure 1.5 shows changes in excise and VAT revenue between 2021 and 2022. Policies to reduce excises or VAT on fuel products contributed to declines in those tax types. Excise revenue declined as a percentage of GDP in 19 countries; decreases of more than 1.0 p.p. occurred in The Bahamas, Belize, Guyana and Mexico. On average, excise revenue fell by 0.4 p.p. over the period. In contrast, revenue from VAT was unchanged as a percentage of GDP on average between 2021 and 2022 but declined in countries that reduced VAT rates to mitigate inflation; the declines were 0.1 p.p. in Barbados and Costa Rica, 0.3 p.p. in Brazil, 0.4 p.p. in El Salvador and 1.0 p.p. in Guyana.

Figure 1.5. Changes in excise and VAT revenue in LAC countries between 2021 and 2022, % of GDP

Source: Authors' calculations based on OECD et al. (2024^[4]), Chapter 4.

StatLink  <https://stat.link/spt5wn>

Table 1.2 presents annual changes in revenue for the Caribbean, Central America and Mexico, and South America by main tax type in 2022. Revenue from income taxes increased by 0.4 p.p. in the Caribbean, 0.5 p.p. in Central America and Mexico, and by 0.8 p.p. in South America. These increases were driven by CIT in all three cases. OCT revenue declined in all sub-regions. Changes in revenue from VAT, PIT and SSCs varied across the sub-regions; the Caribbean was the only sub-region where revenue from all three categories declined between 2021 and 2022.

- In the Caribbean, the largest decreases in revenue as a share of GDP in 2022 were recorded in OCT (-0.6 p.p.). Revenue from other categories except for CIT decreased to a lesser extent (by -0.2 p.p. for PIT, SSCs and property taxes in the 'residual' category and by -0.1 p.p. for VAT). CIT revenue grew 0.7 p.p., largely due to the increase in Trinidad and Tobago.
- In Central America and Mexico and in South America, the largest increases in revenue as a share of GDP in 2022 were recorded in CIT (0.4 p.p. and 0.7 p.p. respectively). Revenue from PIT increased by 0.1 p.p. in both sub-regions. VAT revenue increased in South America by 0.1% of GDP and was unchanged in Central America and Mexico. In South America, the only revenue category that recorded a decrease was OCT, which declined by 0.1 p.p. This category declined in Central America and Mexico (by 0.3 p.p.) as well, where SSCs also fell (by 0.2 p.p.).

Table 1.2. Changes in tax revenues by category as a share of GDP, LAC and sub-regions, 2022

Year-on-year change, p.p.

	LAC	Caribbean	Central America & Mexico	South America
PIT	0.0	-0.2	0.1	0.1
CIT	0.6	0.7	0.4	0.7
SSC	-0.1	-0.2	-0.2	0.1
VAT	0.0	-0.1	0.0	0.1
OCT	-0.3	-0.6	-0.3	-0.1
Res.	0.1	-0.2	0.3	0.1
Total tax	0.3	-0.6	0.3	1.0

Note: The averages exclude Venezuela due to data availability issues. Additionally, the PIT and CIT averages for LAC and the South America sub-region exclude Ecuador due to data quality issues.

Source: Authors' calculations based on OECD et al. (2024^[4]).

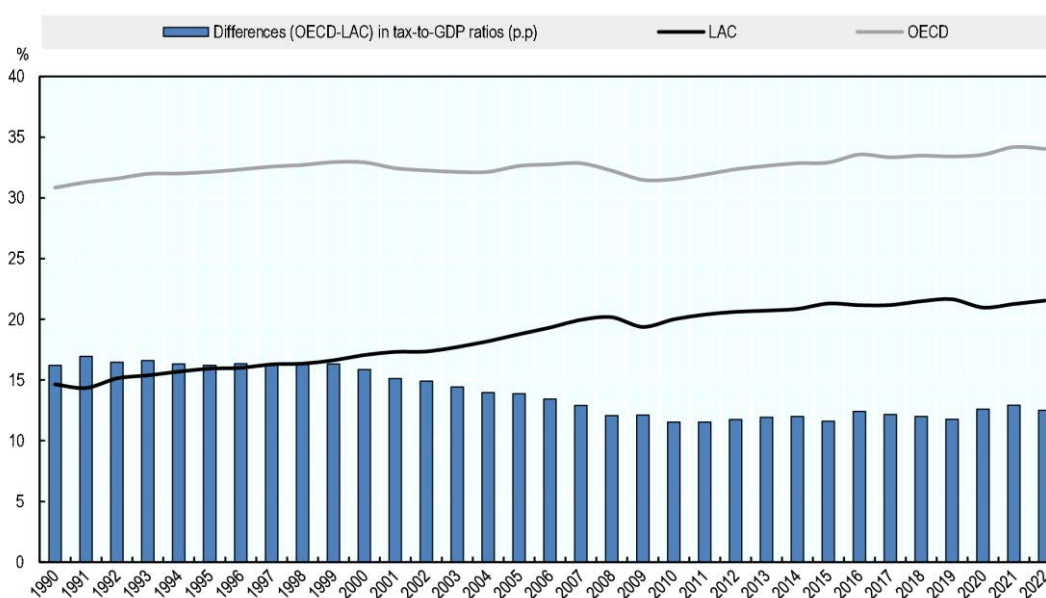

Long-term trends in tax-to-GDP ratios

Evolution of tax-to-GDP ratios since 1990

Despite the declines in tax-to-GDP ratios caused by the global financial crisis (GFC) in 2009 and by COVID-19 in 2020 (of 0.8 p.p. and 0.7 p.p., respectively), the average tax-to-GDP ratio for the LAC region has increased significantly over the past three decades, rising from 14.6% in 1990 to 21.5% in 2022 (Figure 1.6). This trend contrasts with that of OECD countries, where the average tax-to-GDP ratio has been relatively stable since 1990 (although at a higher level than the LAC average); the OECD tax-to-GDP ratio reached 34.0% in 2022, 3.2 p.p. above its level in 1990. The difference between the LAC and OECD average tax-to-GDP ratio has thus reduced considerably over time, reaching 12.5% of GDP in 2022.

Figure 1.6. Tax-to-GDP ratios, LAC and OECD averages, 1990-2022

Percentage of GDP

Note: The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data availability issues. The OECD average represents the unweighted average of the 38 OECD member countries. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38).

StatLink  <https://stat.link/2tpcm6>

Box 1.3. Factors influencing tax levels

Tax-to-GDP ratios are influenced by a range of economic and structural factors. Differences between the LAC and OECD average tax-to-GDP ratios are consistent with the tendency for countries at higher income levels to have higher tax-to-GDP ratios (Figure 1.7). Argentina, Barbados, Brazil and Uruguay show similar tax-to-GDP ratios and levels of income to some OECD countries. Empirical analysis suggests that stronger tax collection, accompanied by stronger institutions, education and skills, and economic diversification, allowed many OECD countries to evade the middle-income trap, in contrast to countries in the LAC region (Melguizo et al., 2017^[16]).

The economic and structural factors that influence tax-to-GDP ratios include GDP per capita (a measure of a country's income level), openness to trade, natural resource endowments and the importance of agriculture in the economy. The capacity of tax administrations, levels of corruption and tax morale (the willingness of people to pay taxes) are also strongly linked to the level of tax revenue (OECD, 2014^[17]; OECD, 2019^[18]).

Figure 1.7. GDP per capita in PPP (USD) and tax-to-GDP ratios for countries in the LAC region, the OECD, and a group of African, Asian and Pacific economies, 2021

Note: The year of comparison is 2021 as data for tax-to-GDP ratios in 2022 is not available for the selected African, Asian and Pacific economies. Cuba and Venezuela are not included in this figure due to data issues. The purchasing-power-parity (PPP) between two countries is the rate at which the currency of one country needs to be converted into that of a second country to ensure that a given amount of the first country's currency will purchase the same volume of goods and services in the second country as it does in the first. The implied PPP conversion rate is expressed as national currency per current international dollar. An international dollar has the same purchasing power as the US dollar has in the United States. An international dollar is a hypothetical currency that is used as a means of translating and comparing costs from one country to the other using a common reference point, the US dollar (USD).

Source: IMF (2023) for figures of GDP per capita. Tax-to-GDP ratios are sourced from the *Global Revenue Statistics Database* (<https://www.oecd.org/tax/tax-policy/global-revenue-statistics-database.htm>).

The tax-to-GDP ratio also reflects political choices regarding the role and size of the government. For example, the extent of state participation in financing social security is an important factor behind disparate tax ratios in the LAC region. From the 1980s onwards, many LAC countries, such as Chile, El Salvador and Mexico, privatised healthcare and pensions to greater or lesser degrees: these contributions to private institutions are not considered SSCs. In Colombia and Peru, private and public programmes compete, and employees opt between them (OECD et al., 2015^[19]; OECD/IDB/The World Bank, 2014^[20]). On the other hand, Argentina, Brazil and Uruguay follow a model where public and private systems are complementary. In these countries, substantial reforms were undertaken to extend coverage of social security systems to those previously excluded. This has also been instrumental in the increase of tax revenues (ECLAC, 2014^[21]).

Informality is another factor that constrains tax collection in the LAC region by significantly reducing the tax base. Informal employment accounts for close to 60% of workers in Latin America and the Caribbean (OECD, 2020^[22]).

The LAC region loses significant amounts of tax revenue to tax evasion and aggressive tax planning. Foregone tax revenue due to non-compliance in the region was estimated at 6.1% of GDP in 2018, mainly in income tax (3.8% of GDP) and VAT (2.3% of GDP) (ECLAC, 2020^[23]).

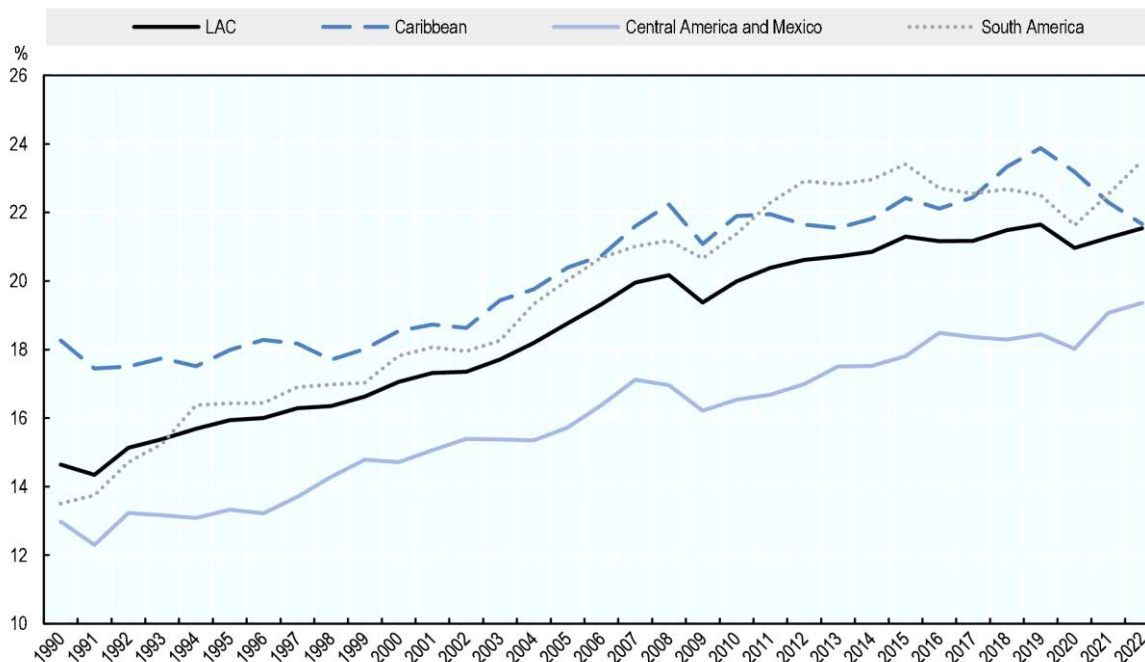

In addition, geographic location and historical factors can influence tax-to-GDP ratios. For example, landlocked countries are less able to impose taxes on goods and services at a port of entry than coastal countries. Socio-demographic determinants, such as the level of education or female participation in the labour force are also important. Finally, international factors, including the tax policies of other countries, can impact tax-to-GDP ratios.

Figure 1.8 shows the evolution of the average tax-to-GDP ratio in the three LAC sub-regions since 1990. While tax levels in all three sub-regions have shown an upward trend during the last three decades, their trajectory shows notable differences:

- On average, South America recorded the strongest growth between 1990 and 2022, of 10.0 p.p. The sub-region recorded a strong increase in its tax-to-GDP ratio during the 1990s. Since 2015, however, South America's tax-to-GDP ratio has declined towards the LAC average, and from 2019 it has followed the LAC average trend. In 2022, South America's tax-to-GDP ratio stood at 23.5%, 2.0 p.p. higher than the LAC average and 1.0 p.p. above its pre-crisis level in 2019.
- The increase in the average tax-to-GDP ratio for Central America and Mexico over the period has followed a similar trend to the LAC average, amounting to 6.4 p.p. Between 1990 and 2022, the average tax-to-GDP ratio of this sub-region remained below the average for the LAC region; in 2022, it stood at 19.4%, 2.2 p.p. lower than the LAC average but 0.9 p.p. higher than its pre-crisis level (18.5% in 2019).
- The average tax-to-GDP ratio of the Caribbean increased by 3.4 p.p. between 1990 and 2022, and it has been consistently higher than the LAC average. After a sharp increase between 2017 and 2019, the Caribbean's tax revenue as a percentage of GDP declined strongly. The Caribbean is the only sub-region that has not recovered to its pre-pandemic level: the average tax-to-GDP ratio stood at 21.7% in 2022, 2.2 p.p. lower than in 2019.

Figure 1.8. Average tax-to-GDP ratios, LAC and sub-regions, 1990-2022

Percentage of GDP

Note: The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data issues. The Caribbean includes eight countries (Antigua and Barbuda, Bahamas, Barbados, Belize, Guyana, Jamaica, Saint Lucia and Trinidad and Tobago), Central America and Mexico nine countries (Costa Rica, Cuba from 2021, Dominican Republic, El Salvador, Guatemala, Honduras, Mexico, Nicaragua and Panama) and South America nine countries (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru and Uruguay). The classification of countries into the different sub-regions follows ECLAC's classification and is based on the spoken language of countries. The Caribbean includes the English-speaking countries and Guyana while Central America and Mexico covers Spanish-speaking countries including Dominican Republic.

StatLink  <https://stat.link/m63oi7>

Evolution of revenue by tax type since 1990

Tax-to-GDP ratios in LAC countries increased in the early 1990s after a decade of macroeconomic instability. During the 1980s, many countries ran large fiscal imbalances and some resorted to alternative ways of financing expenditure (borrowing or printing money). This caused rapid inflation across the region, which eroded the value of tax revenue in real terms. Reforms in the 1990s focused on price stability, trade liberalisation and fiscal discipline. Most governments reduced spending and implemented policies to increase tax revenues; budget management and fiscal balances improved considerably. Policy makers implemented reforms to tax policy and administration to reinforce tax systems against inflationary episodes by shortening collection lags and indexing tax liabilities (ECLAC, 2018^[24]).

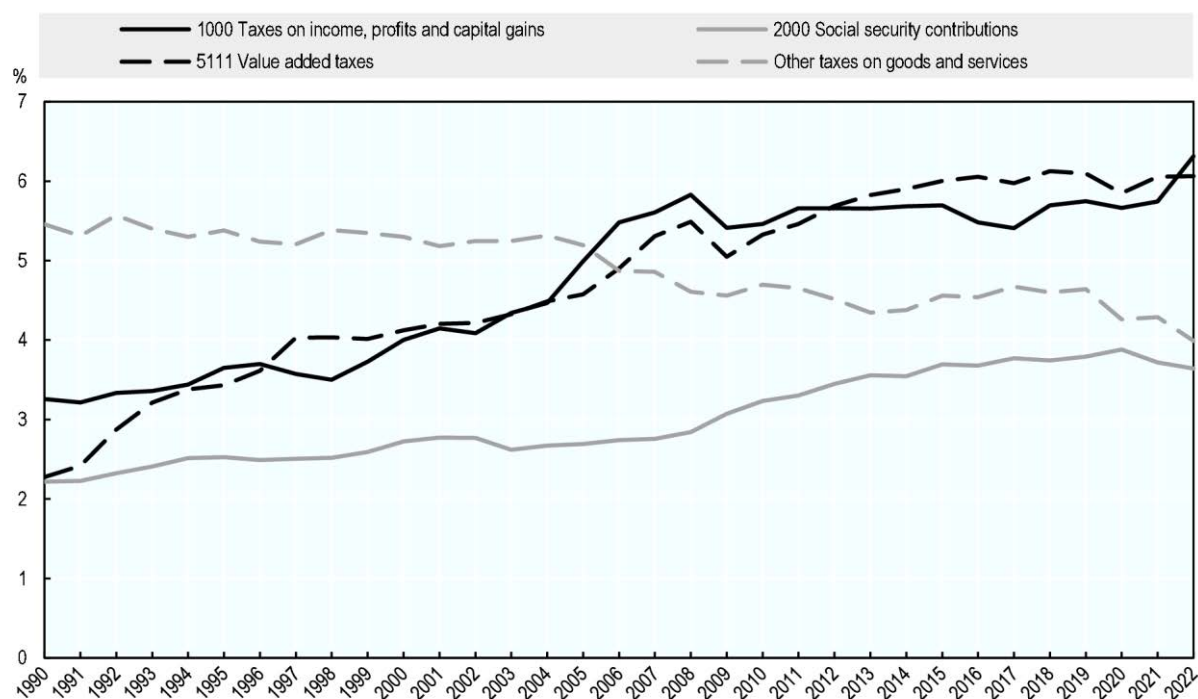

The introduction of VAT has been the most significant tax reform across the LAC region of the past three decades. By the early 1990s, almost all countries were implementing a VAT system and reforms aimed to increase its rate, to widen its base and to improve collections. Several countries have moved towards single-rate VAT schemes (ECLAC, 2018^[24]).

Countries in the LAC region have made significant efforts to modernise tax administration over the last two decades. New information technology systems have been implemented, tax collection systems became

more efficient, and staff have gained expertise (IDB, 2013^[25]). Tax reforms have included the introduction or development of simplified regimes for small taxpayers, the taxation of property based on presumed incomes and the expansion of taxation to labour and capital income, including dividends. Reforms have also included the establishment of minimum taxes, taxes on financial transactions and gradual reductions in the real income level taxed at the top marginal rate (ECLAC, 2013^[26]; ECLAC, 2018^[24]).

Figure 1.9. Revenue from selected taxes in the LAC region, 1990-2022

Percentage of GDP

Note: The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data issues.

Source: Authors' calculations based on OECD et al. (2024^[4]), Chapter 4.

StatLink  <https://stat.link/kn1b6p>

The increase in the average tax-to-GDP ratio in the LAC region since 1990 has largely been driven by increases in revenue from VAT and from taxes on income and profits (PIT and CIT combined), which increased by 3.8 p.p. and 3.1 p.p. respectively between 1990 and 2022. In 2022, revenue from VAT amounted to 6.1% of GDP while revenue from taxes on income and profits amounted to 6.3% of GDP (Figure 1.9).

Between 1990 and 2022, revenue from OCT decreased as a percentage of GDP in the LAC region. This decline is associated with trade liberalisation, as a result of which LAC countries changed the way they tax imported and exported goods as well as specific goods and services. These changes included a reduction of import tariffs, narrowing the base of products and services subject to excises, and the elimination of taxes on exports. One exception is Argentina, where taxes on exports were re-established in 2002, partly abolished in 2015, then reintroduced in 2018.

Five distinct phases in the evolution of tax revenue in the LAC region can be distinguished:

- Between 1990 and 2002, VAT contributed more to the increase in tax revenue than taxes on income and profits (1.9% of GDP versus 0.8%). Over that period, five countries introduced VAT (Barbados, Belize, El Salvador, Jamaica and Paraguay). Several other countries increased standard VAT rates and undertook reforms to widen the tax base and improve revenue collection.
- Between 2002 and 2008, taxes on income and profits contributed more than VAT to the increase in the average tax-to-GDP ratio (the increases amounted to 1.7% and 1.3% of GDP respectively). The increase in revenue from income taxes was partly explained by the commodity price boom after 2003, which drove up CIT revenue from the natural resource sector (ECLAC, 2014^[21]; Barreix, Benítez and Pecho, 2017^[27]). In several countries, it was also a result of policies that reduced tax incentives in free-trade zones, the introduction of minimum taxes for corporations, reforms in international taxation and agreements between countries to fight tax evasion.
- Revenue from VAT and income taxes declined during the GFC. During the subsequent recovery, VAT revenue grew faster than income tax revenue on average across the region, exceeding them as a percentage of GDP in 2013. Commodity prices, contributed to a stagnation of income tax revenue between 2011 and 2015 and a decrease between 2015 and 2016. During this period, two more Caribbean countries introduced a VAT (Saint Lucia in 2012 and The Bahamas in 2015).
- Between 2016 and the start of the COVID-19 crisis in 2020, commodity prices recovered and income tax revenues rebounded. Between 2017 and 2018, revenues from income taxes recorded their largest yearly increase since 2011, at 0.3 p.p. on average, due to strong profits in the mining and oil and gas extraction sectors.
- In 2020, all main tax categories except for SSCs declined as a percentage of GDP due to the COVID-19 pandemic before increasing in 2021. In 2022, only CIT increased as a share of GDP relative to 2021 as explained earlier in this chapter.

Figure 1.11 shows the evolution of revenue from PIT, CIT and taxes on income in total since 2005. Over this period, CIT has remained the main share of income tax revenue in the LAC region, at around 60% on average. Although CIT revenue as a percentage of GDP has been more volatile than revenue from PIT, it has been the larger driver of growth in total revenue from income tax over time. Statutory CIT rates are relatively high in the LAC region and tax provisions are less generous than in other countries, resulting in higher effective average and marginal corporate tax rates in the LAC region (see Box 1.4).

Box 1.4. Corporate effective taxes rates in Latin America and the Caribbean

Tax rates on corporate profits in the LAC region are high by international standards and may jeopardise competitiveness and investments. This is a particular concern given the low level of private investment in LAC countries.

The perception that tax burdens on corporate profits are high in the LAC region is based on two factors. First, average CIT collections are relatively high; in 2021, they amounted to 3.4% of GDP versus 3.3% of GDP in OECD countries. Second, statutory CIT rates (STRs) are relatively high: while the average CIT rate is 23.6% in the OECD, it is 24.1% in the LAC region.

However, revenue levels and STRs do not show the whole picture of the tax system's impact on business investments. For instance, STRs do not consider tax provisions that affect the definition of corporate tax bases. These provisions include allowances for fiscal depreciation, deductions for interest payments, and equity financing. Because these provisions can significantly affect tax liabilities, they are key for the correct measurement of effective taxation across tax systems.

To better gauge the tax burdens on companies, (Hanappi et al., 2023^[28]) calculated forward-looking effective tax rates (ETRs) for 21 LAC countries. Their methodology is based on the OECD's *Corporate Tax Statistics* (OECD, 2022^[29]) and allows comparison across 77 jurisdictions. This methodology does not require information from tax returns since calculations are based on assumptions about the financial returns of hypothetical investment projects, to which existing tax laws are applied to determine the amount of tax owed. Two types of ETR are calculated: (i) the effective average tax rate (EATR), which measures the percentage of profits companies allocate to paying the CIT and (ii) the effective marginal tax rate (EMTR), which measures the extent to which taxes increase the marginal cost of capital (for more detail see (Hanappi et al., 2023^[28])).

Results show that LAC countries have high average and marginal effective tax rates. In 2021, the average EATR in the 21 LAC countries was 23.9%, compared to 21.9% in OECD countries and 17.1% in the remaining countries analysed. In the case of the EMTR, the average rate was 13.8% in the LAC region, almost double the average of 7.6% in OECD countries and 7.8% in the remaining countries (Figure 1.10). At the country level, Argentina, Brazil, and Chile have the highest EATR of the 89 jurisdictions analysed. In the case of EMTR, Argentina, Bolivia, Chile, Jamaica and Peru appear in the top ten.

The high ETRs in LAC countries are mainly explained by the high statutory CIT rates. However, they are also due in part to ungenerous tax provisions. The average EATR in LAC countries is only 0.2 p.p. lower than statutory rates on average while in OECD countries it is 1.7 p.p. lower.

An example of ungenerous tax provisions is the treatment of software depreciation in several countries in the LAC region. While research has estimated that the annual economic depreciation rate of software is 40%, the Chilean legislation does not allow software to be depreciated while the depreciation rates in Argentina and Bolivia are very low (2% and 5%, respectively).

Figure 1.10. Statutory tax rates and effective tax rates, 2021

StatLink  <https://stat.link/pc7uyl>

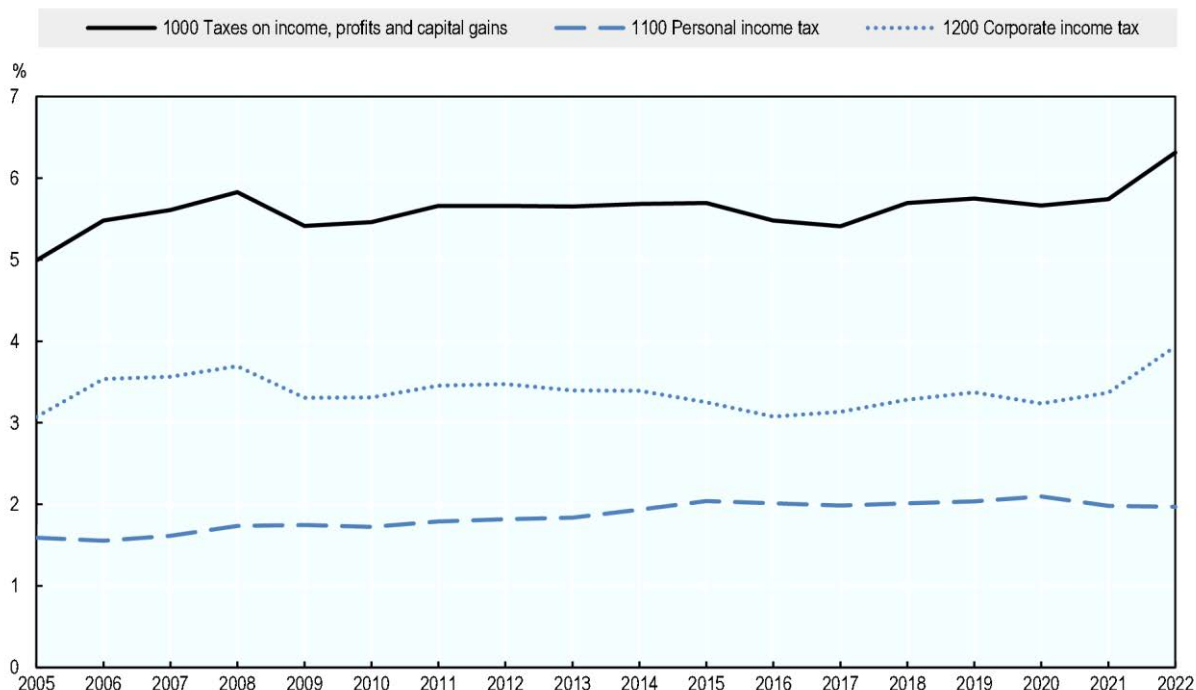

Meanwhile, PIT revenue has steadily increased on average across the region and was more resilient than CIT revenue during the GFC and the COVID-19 crisis. In 2022, the LAC averages for CIT and PIT revenue stood at 3.9% and 2.0% of GDP, respectively.

There are notable differences between the three LAC sub-regions in the evolution of the main tax categories over the last two decades:

- In the Caribbean, VAT revenue as a percentage of GDP increased greatly on average as seven of the eight Caribbean countries included in this report² introduced a VAT system over the period, later than most countries in Central America and Mexico and in South America. VAT was the main driver behind the overall increase in the Caribbean's tax-to-GDP ratio over the period.
- In Central America and Mexico and in South America, taxes on income and profits contributed most to the increase in the overall tax-to-GDP ratio, followed by VAT. Revenue from taxes on income and profits were influenced by increases in mineral and oil prices between 2003 and 2010.

Figure 1.11. Revenue from taxes on income and profits, CIT and PIT in the LAC region, 2005-22

Percentage of GDP

Note: The LAC averages exclude Cuba (up to 2020) and Venezuela due to data issues.; Ecuador is included in the LAC average for total income tax revenues but excluded from the LAC averages for PIT and CIT revenues as a percentage of GDP.

Tax structures in the LAC region

The tax structure (defined as the share of major tax types in total tax revenue) depicts the composition of tax revenues by different tax types. It is an important indicator for understanding the economic and social effects of tax systems in the LAC region.

Evolution of tax structures, 1990-2022

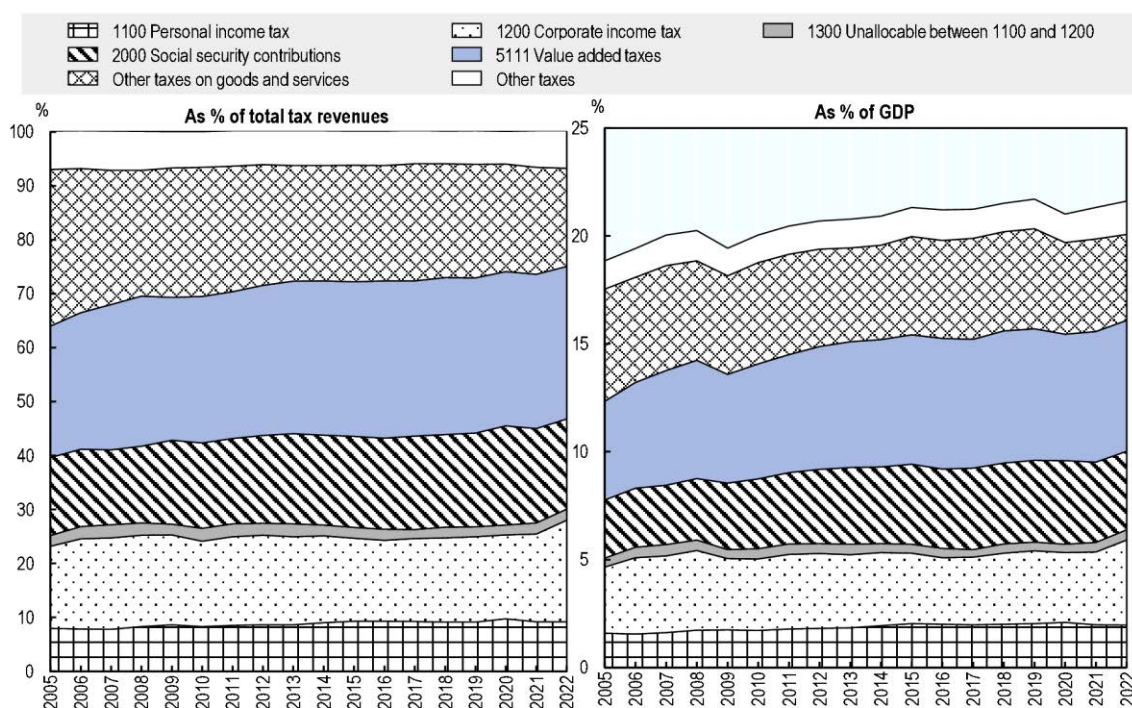

Taxes on goods and services generated the largest share of total tax revenue in the LAC region in 2022, representing about half of total taxation on average. During the last three decades, the average LAC mix has shifted towards VAT, taxes on income and profits, and SSCs while OCT have been less prominent.

- The share of VAT in total tax revenue was 28.3% in 2022, corresponding to an increase of 12.1 p.p. since 1990. The revenue share of other taxes on goods and services (including excises, customs and import duties) declined by 22.1 p.p. over the same period.
- The share of revenue from taxes on incomes and profits grew by 9.4 p.p. (from 20.3% to 29.8% of total tax revenues) between 1990 and 2022.
- The share of SSCs in total tax revenue increased by 2.7 p.p. from 1990 to 16.7% in 2022. Two (opposing) factors have influenced the trajectory of SSCs. While rising personal incomes have led

to higher collections, this was counter-balanced by the full or partial privatisation of social security that occurred in many countries, principally between the mid-1990s and 2010 (OECD et al., 2015^[19]).

The share of PIT grew from 8.0% of total tax revenue in 2005 to 9.2% in 2022, in part due to increases in personal incomes across the region in the two decades before the COVID-19 pandemic. However, in comparison to OECD countries, the average share of PIT revenue remains low in LAC countries despite some countries implementing reforms to expand the tax base. After the GFC, several countries established flat rates on capital income that had previously been exempt and implemented progressive rates on labour income (ECLAC, 2014^[21]). There are relatively few PIT payers in the LAC region, largely due to high levels of informality and the concentration of income earners at low-income levels: in 2013, only 10% of the population in Latin America were registered taxpayers (IDB, 2013^[25]).

Figure 1.12. Average tax structure in the LAC region, 2005-22

Note: The LAC average excludes Cuba (up to 2020) and Venezuela due to data issues. Ecuador is excluded from the LAC average for PIT and CIT revenues due to data quality issues.

Source: Authors' calculations based on OECD et al. (2024^[4]), "Revenue Statistics in Latin America: Comparative tables", *OECD Tax Statistics* (database), <http://dx.doi.org/10.1787/data-00641-en>.

StatLink  <https://stat.link/3zje9y>

Several other factors continue to limit PIT revenue, including a small tax base that is comprised primarily of wages (since tax privileges are often granted to returns on capital), high tax reliefs (such as personal deductions and income exemptions), high tax allowances, and high levels of evasion (Barreix, Benítez and Pecho, 2017^[27]; ECLAC, 2014^[21]; ECLAC, 2023^[8]). (ECLAC, 2020^[23]) finds that the evasion rates for PIT are high in selected LAC countries that conducted tax evasion studies, ranging from 18.7% in Mexico (2016 figure, equivalent to revenue losses of 0.8% of GDP) to 69.9% in Guatemala (2006 figure, equivalent to revenue losses of 0.5% of GDP). Evasion is more common among the self-employed than employees. A study for Mexico concluded that tax revenue losses as a percentage of GDP are nearly five times higher

for individuals with business activities and almost seven times higher for persons with rental income than for wage earners. Similarly, in Costa Rica, the evasion rate for wage-earners and pensioners was only 3.5% in 2018, while the non-compliance rate for profit-making activities was 82.7% in 2018 and has been trending upward since 2015 (ECLAC, 2023^[8])

The redistributive impact of PIT in Latin America is weak, achieving a reduction of just 2% in income inequality, which contrasts markedly with the countries of the European Union, where income taxes reduce inequality by 12% in 2014. The reduction in the Gini coefficient attributable to PIT in the LAC region ranged from 0.3% (Paraguay) to 5.9% (Mexico) in 2014 (OECD et al., 2018^[30]). Many LAC countries often implement tax deferrals, reduced rates and exemptions, which typically have less redistributive impact than targeted tax reliefs. Deferrals postpone the deadline for filing and paying taxes but do not adjust tax calculations based on household income. PIT exemptions, on the other hand, might reduce revenue and decrease redistributive effectiveness. However, it is important to consider the region's heterogeneity, as removing many of these tax privileges or lowering their thresholds may enhance redistributive effectiveness at the expense of exacerbating distortions in allocative efficiency, which may influence taxpayers' decisions and behaviour (ECLAC, 2023^[8]).

Enhancing the design of PIT has the potential to increase the progressivity of tax systems in the LAC region and to generate higher revenue. More progressive tax regimes in the region require more efficient tax administrations. It is essential that the design of PIT in each country, as well as potential reforms to enhance its effectiveness, achieves a balance between the principles of administrative simplicity, distributive equity and revenue sufficiency (ECLAC, 2023^[8]).

The share of CIT in total tax revenue increased by 3.6 p.p. between 2005 and 2022, reaching 18.8%, mainly due to the significant increase in CIT revenue and decrease of OCT revenue between 2021 and 2022. CIT evasion is also a significant issue in the LAC region, with higher evasion rates than for PIT. ECLAC (2020^[23]) states that “evasion rates for CIT range from 19.9% in Mexico to almost 80% in Guatemala”. Revenue losses attributed to tax evasion are estimated to exceed 4% of GDP in the Dominican Republic, Guatemala, Peru and Panama.

For all three regions, the most significant share of revenue was derived from VAT. South America had the highest share of VAT revenue in 2022, at 30.8% on average. SSCs were lowest in the Caribbean in 2022, at 11.8% of total tax revenue on average. This was slightly less than half of the average for the other sub-regions (18.9% and 18.5% respectively in Central America and Mexico, and in South America). All three sub-regions generated higher revenue from CIT than from PIT.

Average tax structures in LAC and the OECD

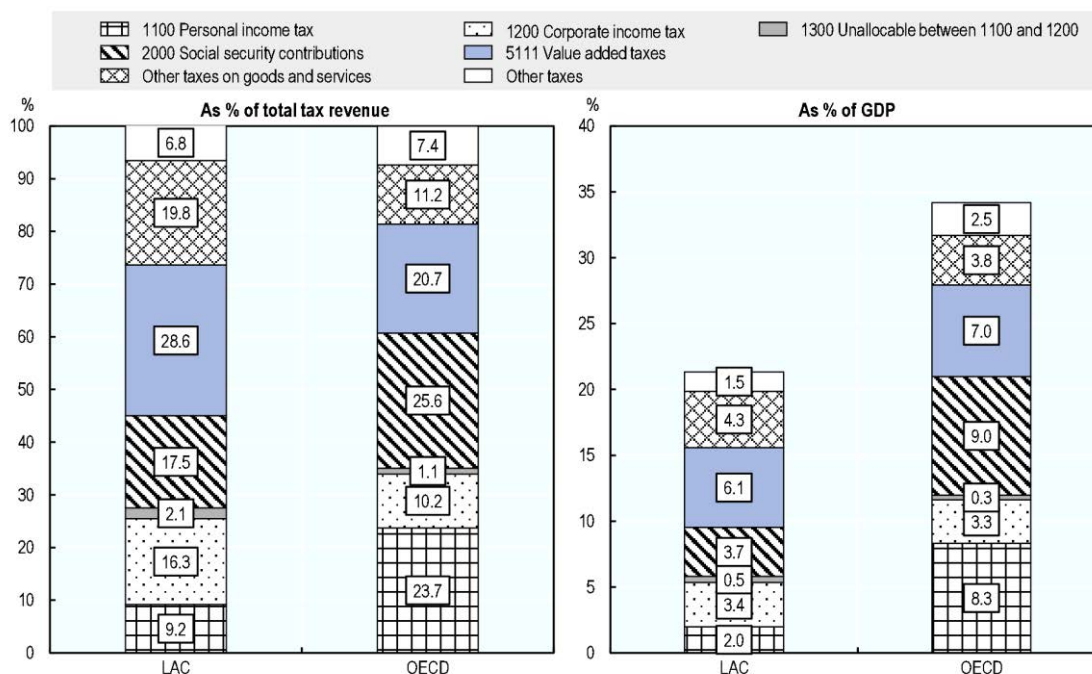

Relative to the average for OECD countries, the average tax mix for the LAC region is characterised by low revenue from PIT and SSCs (Figure 1.13). LAC countries rely more on taxes on goods and services, which make up half of tax revenue on average, compared with around one-third in OECD economies on average. As a percentage of GDP, revenue from taxes on goods and services in the LAC region and in the OECD were similar in 2021, at 10.3% and 10.7% respectively.³

By contrast, the combined share of taxes on income and profits and SSCs as percentage of total tax revenue was much lower in the LAC region than in the OECD in 2021 (45.0% versus 60.7%, on average). As a percentage of GDP, these two categories amounted to 9.5% in the LAC region, less than half the OECD average (21.0%). The tendency towards private provision of social security in many LAC countries explains some of this difference.

On average, CIT generated 16.3% of total tax revenue in the LAC region, compared with 10.2% in the OECD (respectively 3.4% and 3.3% of GDP). The most striking difference relates to revenue from PIT, which contributed 23.7% of total tax revenues in the OECD on average in 2021 versus 9.2% of total tax

revenue in the LAC region. PIT revenue amounted to 2.0% of GDP in the LAC region on average, compared with 8.3% for the OECD.

Figure 1.13. Average tax structure in the LAC and the OECD, 2021

Note: The year of comparison is 2021 as the 2022 tax structure for the OECD average is not available. The LAC average excludes Venezuela due to data issues. Ecuador is excluded from the LAC average for PIT and CIT revenues due to data quality issues. The OECD average represents the unweighted average of the 38 OECD member countries. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38).

Source: Authors' calculations based on OECD et al. (2024^[4]), "Revenue Statistics in Latin America: Comparative tables", *OECD Tax Statistics* (database), <http://dx.doi.org/10.1787/data-00641-en>.

StatLink  <https://stat.link/nxvr58>

Taxes on immovable property and payroll (contained within the category "other taxes") are a less important source of revenue for the LAC region on average than in the OECD, although there are challenges with data availability for property taxes.

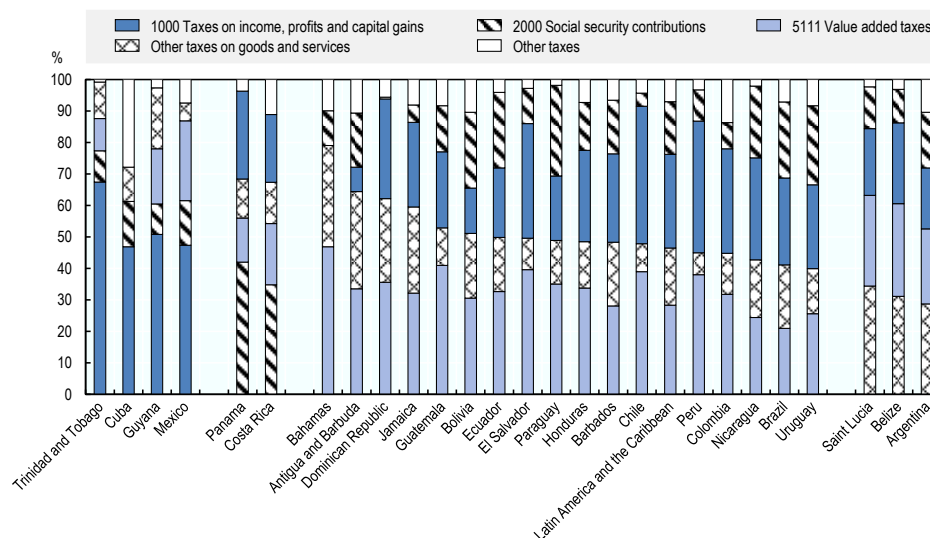

Tax structures in LAC countries

Taxes on goods and services were the main source of revenue for all LAC countries except Costa Rica, Cuba, Guyana, Mexico, Panama, and Trinidad and Tobago in 2022 (Figure 1.14). For Cuba, Guyana, Mexico and Trinidad and Tobago, taxes on income and profits accounted for the largest share, whereas SSCs were the most important source of tax revenue for Costa Rica and Panama.

In most of the countries where taxes on goods and services were the main source of revenue, VAT contributed a larger share than OCT. Seventeen countries recorded higher tax revenue from VAT, ranging from 21.0% of total tax revenue in Brazil to 46.8% in The Bahamas. In contrast, three countries (including two in the Caribbean) received a larger share of revenue from taxes on goods and services other than VAT. This group includes Argentina, which sourced 28.7% of total tax revenue from taxes on goods and services other than VAT: export taxes represented just under a quarter of this category and were equivalent to 2.1% of GDP, compared with less than 0.1% of GDP on average in the region.

Figure 1.14. Tax structures in LAC countries, 2022

Percentage of total tax revenue

Note: Countries are grouped by the main share of tax revenues among 1000 taxes on income and profits, 2000 social security contributions, 5111 value added taxes and other taxes on goods and services. The Bahamas does not tax income. There is no VAT system in Cuba. The LAC average represents the unweighted average of 26 LAC countries included in this publication and excludes Venezuela due to data availability issues.

Source: Authors' calculations based on OECD et al. (2024^[4]), Chapter 4.

StatLink  <https://stat.link/vbmf15>

In 2022, SSCs ranged from 0.6% of total tax revenue in the Dominican Republic to 42.0% in Panama. The level of this revenue reflects choices about how to finance social security (see Box 1.3): in countries with public or mixed social security schemes (including Argentina, Bolivia, Brazil, Costa Rica, Panama, Paraguay and Uruguay), SSCs accounted for over 17% of total tax revenue.

VAT revenue ratio

This section discusses the VAT revenue ratio (VRR) in LAC countries in 2022. The VRR “measures the difference between the VAT revenue collected and what would theoretically be raised if VAT was applied at the standard rate to the entire potential tax base in a “pure” VAT regime and all revenue was collected” (OECD, 2022^[31]). The VRR is the ratio of the actual VAT revenues to the product of final consumption (net of VAT revenues) and the standard VAT rate. The calculation is shown below.

$$\frac{\text{VAT revenues}}{(\text{final consumption expenditure} - \text{VAT revenues}) \cdot \text{standard VAT rate}}$$

This indicator provides a sense of VAT revenue loss related to exemptions and reduced rates, fraud, evasion and tax planning as well as weaknesses in tax administrations. However, this indicator needs to be interpreted with reference to the underlying characteristics of the VAT system in each country, as a higher VRR could result from cascading effects (for example when exemption occurs early in the supply chain) or from a failure to refund VAT input credits. Other factors may also influence the ratio upwards or downwards, for example when the place of taxation rules for international trade diverge from the destination principle or when the tax on inbound digital supplies is not collected. It is also important to note that the

interpretation of the VRR is also more difficult for countries relying significantly on tourism. These countries may record a high VRR due to methodological reasons: purchases by non-residents may not be included in final consumption expenditure (the denominator) whereas the VAT on these purchases is included in the overall VAT revenues (the numerator) (Keen, 2013^[32]).

Table 1.3. VRR and VAT rates in LAC countries by sub-region, 2022

	VRR	VAT rate (%)
Central America and Mexico	0.49	13.6
Costa Rica	0.50	13.0
Dominican Republic	0.38	18.0
El Salvador	0.73	13.0
Guatemala	0.52	12.0
Honduras	0.52	15.0
Mexico	0.33	16.0
Nicaragua	0.52	15.0
Panama	0.41	7.0
South America	0.60	16.8
Argentina	0.47	21.0
Bolivia	0.70	13.0
Chile	0.71	19.0
Colombia	0.42	19.0
Ecuador	0.81	12.0
Paraguay	0.69	10.0
Peru	0.58	18.0
Uruguay	0.45	22.0
Caribbean	0.64	13.6
Antigua and Barbuda	0.71	15.0
Bahamas	1.26	10.0
Barbados	0.62	17.5
Belize	0.71	12.5
Guyana	0.22	14.0
Jamaica	0.73	15.0
Saint Lucia	0.59	12.5
Trinidad and Tobago	0.27	12.5
LAC average	0.58	14.7
OECD average (2020)	0.56	19.1

Note: Brazil, Cuba and Venezuela are excluded. Brazil operates a multiple-rate system with tax levied at different rates for each sub-national level. Cuba did not operate a VAT system in 2022. Venezuela's tax revenue data are not available.

Source: VAT rates are sourced from (OECD, 2022^[31]), the final expenditure consumption figures from the WEO (IMF, 2023^[5]) and VAT revenues from the country tables in OECD et al. (2024^[4]), Chapter 5, (OECD, 2022^[31]), for the OECD figures.

Table 1.3 presents the VRR for LAC countries and for the three sub-regions. The highest VRR is seen in The Bahamas and stands well above 1. This is a notable example of the impact of the methodology on the interpretation of the VRR as explained above. The high VRR in The Bahamas is due to the nominator being artificially high while the denominator does not correspond to the actual tax base. This is partly explained by the high share of revenue that the country receives from tourism driving up the VRR as tourism receipts are not accounted for in the final consumption expenditure in the denominator. Despite this caveat, it is important to note that The Bahamas introduced a VAT in 2015 following international good practice, including a broad-based VAT with a low standard rate (at 7.5%, increased to 12.0% in 2018), a limited number of exemptions and no reduced rates. These also contribute to the country's high VRR.

By contrast, the lowest VRRs were seen in Guyana and Trinidad and Tobago in the Caribbean and in the Dominican Republic and Mexico in Central America. Several factors contribute to the low VRR in Mexico, including the scope of VAT exemptions, the application of a domestic zero rate to numerous goods and services, as well as low compliance (OECD, 2022^[31]); (OECD, 2018^[33]). However, Mexico implemented a VAT reform in January 2014 including the replacement of some reduced and zero rates with the standard rate and the introduction of improved processes. The VRR in Mexico increased from 0.26 in 2013 to 0.29 in 2014. The VRR increased to 0.35 in 2020 as a result of the broadening of the VAT base for digital services in line with OECD recommendations (KPMG, 2019^[34]), effective from June 2020.

Several factors may contribute to the low VRR in the Dominican Republic. The design of VAT in the country is one factor: the Dominican Republic has numerous VAT exemptions (Schlotterbeck, 2017^[35]). Tax-exempt goods include educational materials, medicines, health services, financial services, utilities, renewable energy equipment and inland transportation services, while exempted services include education, cultural services and electricity (OECD, 2022^[36]). VAT evasion is another important factor for the low VRR. ECLAC (2020^[23]) calculates that VAT evasion in the Dominican Republic is among the highest in the LAC region at 43.8% (2017 figure), against an average of 30% in a sample of 12 countries.

VAT evasion remains an important challenge elsewhere in the LAC region. ECLAC (2020^[23]) examined various studies on VAT evasion in 12 countries and observed that VAT non-compliance rates in the region ranged from 14.8% in Uruguay to 45.3% in Panama in 2016. Guatemala, the Dominican Republic and Panama recorded the largest increases (by 30% of more) in their VAT evasion rate since 2009.

Environmentally related tax revenues

Through the Paris Agreement of 2016, countries have committed to decarbonise their economies by the middle of the 21st Century, implying a shift away from fossil fuels as a source of energy. To reduce emissions and drive decarbonisation, an increasing number of countries are deploying environmentally related taxes and price-based policy instruments. By incorporating a price signal into consumer decisions, environmental taxation gives effect to the polluter-pays principle to favour greener over more polluting economic activities. Well-designed systems of environmental taxation can encourage businesses and households to consider the environmental costs of their behaviour.

An environmentally related tax is a tax whose base is a physical unit (or a proxy of a physical unit) of something that has a proven, specific negative impact on the environment regardless of whether the tax is intended to change behaviours or is levied for another purpose (OECD, 2005^[37]).

Countries in the LAC region have generally been slow to implement environmentally related taxes. Although they have introduced fuel taxes (mainly for revenue collection rather than environmental purposes), many countries also provide subsidies for energy products (Lorenzo, 2016^[38]) despite the strain these can put on national budgets to mitigate the impact of high and volatile fuel prices, control inflation, boost competitiveness and protect the poorest sections of the population. While energy support decreased between 2012 and 2019 by around 30%, it more than doubled in 2021 (OECD, 2023^[39]).

However, revenue from energy taxes was greater than the cost of subsidies for five of the six LAC countries included in (OECD, 2021^[40]) (Costa Rica, Dominican Republic, Guatemala, Jamaica and Uruguay, with the exception being Ecuador), representing on average a net positive impact on public finances in these six countries (roughly 0.6% of GDP in 2018 on average).

Beyond taxes on fuel and the registration or use of vehicles, environmental taxes are still underdeveloped across the LAC region. However, a few LAC countries have introduced green tax reforms in recent years. Argentina, Chile, Colombia, Mexico and Uruguay introduced carbon pricing policies through carbon taxes, primarily in the transport sector, although these remain limited and the effective carbon rates are not at a level that can reduce carbon emissions effectively (OECD, 2023^[39]).

A detailed examination of country-specific taxes⁴ reveals that environmentally related tax revenue (ERTR) in the LAC region in 2022 ranged from 0.1% of GDP in Belize to 1.7% in Dominican Republic (Figure 1.15). On average across 23 LAC countries in this report, ERTR amounted to 0.8%⁵ of GDP in 2022, below the OECD average of 1.9% of GDP (estimated 2022 figure) (OECD, 2022^[41]).

Figure 1.15. Environmentally related tax revenue in LAC countries by main tax base, 2022

Percentage of GDP

Note: The LAC average represents the unweighted average of 23 LAC countries included in this publication and excludes Argentina, Costa Rica, Cuba and Venezuela due to data issues. The figure does not include Jamaica's revenues from the special consumption tax on petroleum products (estimated to be more than 2.0% of GDP in 2018) (OECD, 2021^[40]) as the data are not available. The OECD average represents the unweighted average of 37 OECD member countries excluding Costa Rica.

Source: PINE database for Chile, Colombia and Mexico, and author's calculations for other countries based on OECD et al. (2024^[4]), Chapter 5.

StatLink  <https://stat.link/kpcjyq>

In 2022, revenue from energy taxes (most commonly excises on diesel and petrol) generated the highest share of total ERTR in the LAC region. Revenue from energy taxes amounted to 0.5% of GDP on average, while revenue from motor vehicle and transport services amounted to 0.4% of GDP and represented most of the remainder. Revenue from tax levied on other environmentally related bases was negligible (i.e. < 1.5% of the total ERTR). ERTR was higher in the OECD than in the LAC region in 2022 across the different bases, notably for energy-related taxes that amounted to 1.3% of GDP (OECD, 2022^[41]).

There were notable differences in the composition of ERTR across the LAC sub-regions in 2022, on average (Figure 1.16). Energy-related taxes accounted for the highest share of ERTR in Central America and Mexico (0.8% of GDP out of a total of 1.1%); energy- and transport-related taxes were similar in South America at 0.4% and 0.3% of GDP respectively in 2022, and transport-related taxes represented the highest share of ERTR in the Caribbean region at around 0.5% of GDP. Transport-related tax revenue for most Caribbean countries was mainly sourced from travel or departure taxes, an important source of revenue for tourism-reliant countries.

Between 2021 and 2022, average ETRs in the LAC region declined by 0.1 p.p. due to a fall in energy-related tax revenue. This was also the case for all three sub-regions as well as for the OECD, which recorded a 0.2% average decline over the same period. The fall in energy-related tax revenue across the LAC region and sub-regions was associated with lower demand and energy tax reductions and suspensions (e.g. VAT or excise tax rate reduction or suspension) as an important component of support measures aiming to reduce the effective prices consumers pay. (see Box 1.3).

In most LAC countries, ETRR declined as a share of GDP (14 countries) or remained at the same level (8 countries) in 2022. Only three out of the 23 LAC countries with available data recorded increases in their ETRR. The changes in ETRR over the period ranged from a decrease of 1.8% of GDP in Guyana to an increase of 0.5% in The Bahamas.

Figure 1.16. Environmentally related tax revenue in the OECD, LAC and sub-regional averages by main tax base, 2022

Percentage of GDP

Note: The LAC average represents the unweighted average of 23 LAC countries included in this publication and excludes Argentina, Costa Rica, Cuba and Venezuela due to data issues. The OECD average represents the unweighted average of 37 OECD member countries excluding Costa Rica. As well as being part of the LAC region, Chile, Colombia and Mexico are also member countries of the OECD and thus are incorporated in both averages.

StatLink  <https://stat.link/0u3pm2>

Taxes by level of government

In LAC countries, tax revenue is collected predominantly by central or federal entities. Sub-national public spending is financed through transfers from upper to lower levels of government to a greater extent than in OECD countries. Countries covered in this report exhibit varied structural configurations: Argentina, Brazil, Mexico and Venezuela have federal systems whereas the others are unitary states.

Where sub-national data for LAC countries is available, tax revenue collected by central government accounted for more than two-thirds of the total collections, whereas the corresponding figure for OECD countries was about 60% (2021 figure). Brazil is a notable exception: central government tax revenue amounted to 46.2% of tax collected in 2022 (Table 1.4).

There are two statistical issues to consider when comparing the attribution of revenue for LAC countries with that of OECD members. First, revenue of both groups have been attributed to different levels of government according to guidelines set out in the 2008 System of National Accounts (SNA).⁶ The second issue is that some LAC countries lack tax revenue statistics at sub-national level.

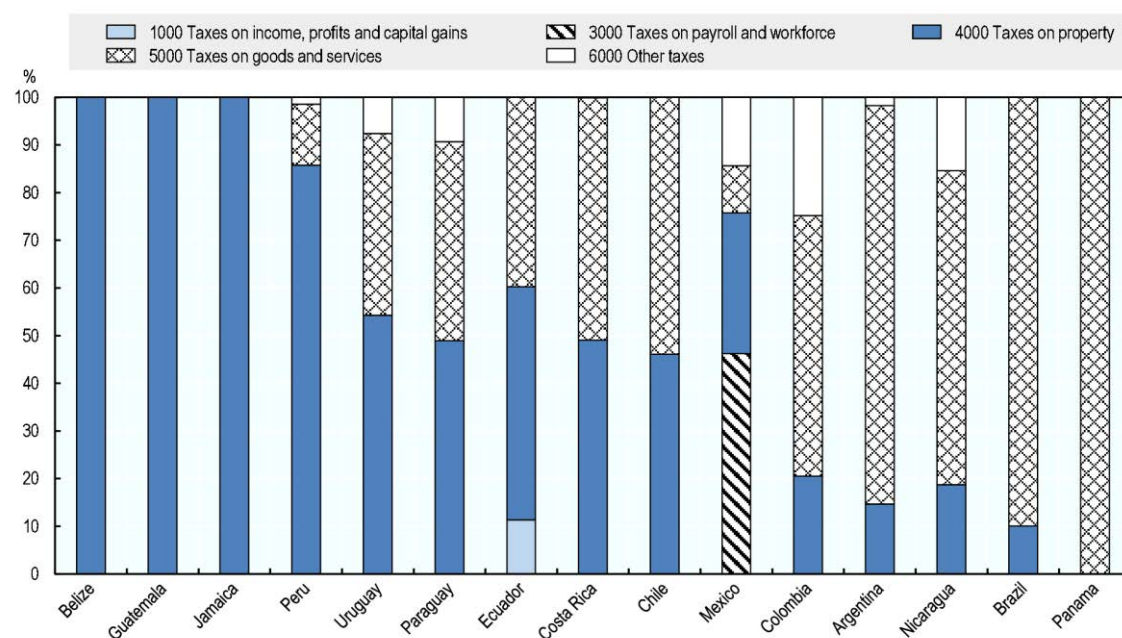

For the 19 LAC countries in this report for which sub-national data is available, the share of sub-national tax revenue in total tax revenue was below 7.0% in 2022 except in Argentina, Brazil and Colombia. Federal systems tend to raise more substantial own revenue compared to unitary states. In Brazil, states and municipalities collect about a third of total tax revenue, indicating a significant degree of decentralisation of tax collection. A large part of the VAT (ICMS – *imposto sobre operações relativas à circulação de mercadorias e prestação de serviços de transporte interestadual e intermunicipal e de comunicação*) is collected at the state level.

Sub-national tax revenue in Argentina and Colombia accounts for more than 16% of total tax revenue. Argentina has a significant collection at state level, due in part to the provincial sales tax (*impuesto sobre los ingresos brutos*). As a percentage of GDP, sub-national tax revenue ranged from less than 0.1% in Guyana and Guatemala to 9.9% in Brazil in 2022 and the median value amounted to 0.4% of GDP. Low sub-national tax revenue across the LAC region reflects the fact that sub-national governments in LAC countries tend to have a relatively narrow range of taxes under their jurisdiction. The taxes most frequently assigned to sub-national entities are property taxes, motor-vehicle licenses, taxes on specific services and municipal fees. The revenue-generation potential of these instruments is limited relative to the tax bases under central jurisdiction, such as VAT and income taxes.

In 2022, all subnational tax revenue in Belize and Guatemala and Jamaica, and more than half of tax revenue collected at the sub-national level in Peru, Uruguay, Ecuador and Paraguay, was sourced from property taxes (Figure 1.17). All other countries in the region rely principally on taxes on goods and services. Mexico is the only country that also collected revenue from different tax bases. In 2022, nearly half of sub-national tax revenue in Mexico came from payroll taxes. In OECD countries, sub-national entities tend to have much broader potential tax bases. A substantial proportion of revenue collection by sub-national governments in OECD countries is generated by taxes on income and profits (representing more than a third of the total collected at sub-national level on average).

The COVID-19 crisis has highlighted the need for structural reforms to improve the collection and enhance the sources of revenue at sub-national level. Options for doing so include improvements in information and statistics regarding the revenue from these taxes, the administrative capacity to collect at the local level, effective co-ordination with national authorities, and promotion of sustainable sources of tax revenue at this level (Nieto-Parra and Orozco, 2020^[42]).

Figure 1.17. Tax mix of sub-national tax revenue in LAC countries, 2022

Note: Figures for Antigua and Barbuda, Bahamas, Barbados, Bolivia, Cuba, Dominican Republic, El Salvador, Guyana, Honduras, Saint Lucia, Trinidad and Tobago and Venezuela are excluded as either the sub-national tax revenue data or the breakdown of sub-national tax revenue data by the main type of tax category is not available. Figures exclude local government revenues for Argentina but include provincial revenues. Data for Ecuador, Nicaragua, Panama and Uruguay are estimated for 2022.

Source: Authors' calculations based on OECD et al. (2024^[4]), Chapter 6.

StatLink  <https://stat.link/po53ih>

Low tax revenue at the sub-national level in LAC countries may result from a lack of administrative and technical capacity. Property taxes require sophisticated systems and information, and collecting this revenue is expensive. Appropriate property registers are lacking in many countries; where they exist, they are rarely updated (Canavire-Bacarreza, Martínez-Vázquez and Sepúlveda, 2012^[43]); (OECD et al., 2023^[6]). As a result, tax authorities lack access to accurate valuations of lands and buildings; real estate registries are often reluctant to share this information. Property tax also suffers from a high level of informality: buildings are constructed without permits, properties are not registered and reported prices of some real estate transactions are falsified. As property tax is one of the most controversial taxes with citizens and has high political costs, politicians are often unwilling to invest sufficient resources to raise revenue via this instrument.

Table 1.4. Attribution of tax revenue to sub-sectors of general government in LAC countries

Percentage of total tax revenue

1. The data exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), The Bahamas, Barbados, Cuba, the Dominican Republic, Saint Lucia, Trinidad and Tobago and Venezuela as the data are not available. Local government revenue data have been available since 1991 for Nicaragua, since 1994 for Bolivia, since 1995 for Guatemala, since 1998 for Jamaica, since 1999 for Panama, since 2000 for Peru, since 2002 for El Salvador and Guyana, since 2006 for Paraguay and since 1990 for all other countries.

2. The data include the following estimations: Antigua and Barbuda (social security contributions for 2019-2022), Bahamas (social security contributions for 2021 and 2022), Ecuador (local tax revenues for 2021 and 2022), Nicaragua (local tax revenues for 2022), Panama (local tax revenues and social security contributions for 2022), Saint Lucia (social security contributions for 2021 and 2022) and Uruguay (local tax revenues for 2022). See the corresponding country tables for more information.

3. Some tax revenue data between 2014 and 2017 and all data from 2018 are not available. The breakdown by sub-sectors of general government is not available for those years.

4. Colombia is constitutionally a unitary country with high autonomy of its territorial entities.

5. Data for sub-sectors of general government in Cuba are only available between 2002 and 2012.

Notes

¹ The OECD figure is provisional and is based on preliminary data provided for the year 2022. The data need to be interpreted with caution as they are subject to revisions in future years that can affect the magnitude, and less commonly, the direction, of change between the last two years of data.

² VAT was introduced in 1991 in Jamaica, 1997 in Barbados, 2006 in Belize (the General Sales Tax), 2007 in Guyana and Antigua and Barbuda, 2012 in Saint Lucia and in 2014 in the Bahamas.

³ The year of comparison is 2021 as the average tax structure for OECD countries in 2022 is not available at the time of writing.

⁴ Although environmentally related tax revenues are not separately identified in the standard OECD classification of tax revenues, they can be identified through the detailed list of specific taxes included for most countries within this overarching classification. It is on this basis that they are included in the OECD Policy Instruments for the Environment (PINE) database (OECD, 2022^[41]). In 2020, the OECD started the collection of Environmentally Related Tax Revenue (ERTR) accounts in line with the System of Environmental and Economic Accounting and ERTR accounts are disaggregated by industries and households (OECD, 2021^[44]).

⁵ Both LAC and OECD figures here refer to unweighted averages comprising 26 countries for the LAC region and 38 countries for the OECD.

⁶ This means that revenues are generally attributed to the level of government that exercises the authority to impose the tax or has the final discretion to set and vary the tax rate. This has implications for situations where one level of government collects tax revenues and transfers them in whole or in part to other levels. Regional examples of this type of mechanism are the Co-participation Law in Argentina, federal participations in Mexico (mandated in the Fiscal Co-ordination Law) and participation funds in Brazil (defined in Article 159 of the Constitution).

2 Fiscal revenues from non-renewable natural resources in Latin America and the Caribbean

Principal findings

Hydrocarbon revenues surged in 2022 in the context of elevated market volatility

International oil and gas prices surged in the first half of 2022 due to Russia's invasion of Ukraine and constrained global supply. While oil prices gave ground in the second half of the year as macroeconomic concerns weighed on market sentiment, natural gas prices remained exceptionally volatile. Rising hydrocarbon output in the region led hydrocarbon revenues to register 4.4% of GDP (compared to 2.6% of GDP in 2021), a significant upswing.

Mining revenues rose marginally in 2022 amidst weakening prices and lower production volumes.

After a short-lived jump after Russia's invasion of Ukraine, prices for many metals and minerals fell for the year. Demand in China was buffeted by consecutive COVID-19 lockdowns, weakening residential construction, and reduced steel production. However, prices for coal and lithium continued to rise strongly. Fiscal revenues from mining rose to 0.75% of GDP (up from 0.67% of GDP in 2021), driven by strong outturns in Chile (where lithium revenues compensated for a fall in copper receipts) and Colombia.

Market uncertainty and macroeconomic headwinds impacted fiscal revenues from non-renewable natural resources in Latin America and the Caribbean during 2023.

Global energy markets remained volatile in 2023, reflecting shifts in market sentiment, normalisation of natural gas prices in Europe, and disparate trends in the supply and demand of hydrocarbons. While the overall trend in prices remained down, higher than expected oil demand in the third quarter sparked a rally that was given further impetus by the escalation of the conflict between Israel and Hamas after the October 7th attacks. Metals and minerals prices largely fell for the year, but some rebounded in the second half due to rising demand in China.

Hydrocarbon revenues in the region dipped to an estimated 3.9% of GDP (compared to 4.4% of GDP in 2022). Lower prices dragged down payments of royalties and other State participations in the commercial value of production, which represent the primary fiscal instruments applied to the sector. Mining revenues are estimated to have contracted sharply, falling to 0.5% of GDP in 2023 (compared with 0.8% of GDP in 2022). Volatile CIT receipts were the principal factor behind this decline.

Hydrocarbon revenues surged in 2022 in the context of elevated market volatility

Global energy markets were marked by significant volatility in 2022. Prices for oil and natural gas surged in the first half of the year due to Russia's invasion of Ukraine in February 2022 and the subsequent application of economic sanctions on the Russian Federation by the European Union and the United States. In March, benchmark prices leapt for most energy products, including month-on-month increases of 56% for natural gas in Europe (or 592% year-on-year) and 21% for Brent crude oil (or 77% year-on-year). Prices remained high for the remainder of the first half of the year because of additional policy measures, constrained production (especially in OPEC+ countries) and a reordering of energy trade. Members of the European Union adopted a plan to reduce natural gas imports from the Russian Federation by two-thirds by the end of 2023. Additionally, in March, the United States banned imports of Russian oil, liquified natural gas (LNG), and coal.

Trends in energy prices largely decoupled in the second half of the year. Natural gas prices were highly volatile; in Europe, prices reached an all-time high of USD 70 per million British thermal units (MMBtu) in August due to large European purchases of LNG in global markets and the Russian Federation's cut in supply to some European countries. However, prices subsequently trended lower as gas inventories in Europe filled ahead of schedule and industrial and residential demand declined. By December, the price of natural gas in Europe was down 49% from its high in August and down 5% from a year prior. In contrast, oil prices slid as markets priced in the impact of higher crude oil production, increasingly restrictive monetary policy and slowing global growth. The spot price of Brent in December was 33% below its peak in June but 9% over the price at the end of 2021. Despite its weak second half performance, the average annual price of Brent was up 41.7% for the year.

Latin America and the Caribbean (LAC) experienced a strong increase in hydrocarbon production and exports in 2022. The region produced 7.9 million barrels per day, up 7.6% from the previous year but still well below the high of 9.6 million barrels per day in 2014 (Table 2.1). Production in Brazil reached an all-time high during the year and crude oil output in Mexico hit its highest level since 2018. Oil output continued to ramp up in Guyana as an additional floating production storage and offloading unit, the Liza Unity, entered operation (Bank of Guyana, 2023^[1]). Sizeable increases in production were also seen in Argentina – especially from the Vaca Muerta shale formation – and in the Bolivarian Republic of Venezuela. The rise in crude oil exports was largely driven by Brazil, Colombia and Guyana.

Natural gas production also increased in 2022, although the trend was not generalised across the region. In Argentina, natural gas output rose 7%, reflecting strong production in the Vaca Muerta shale gas field. Exports from Argentina, largely to Chile, also grew strongly. Trinidad and Tobago also experienced a rise in production (marking a modest rebound after contracting sharply in 2020 and 2021) and a significant increase in exports. Peru experienced a similar dynamic, with higher exports due to a base effect; the Melchorita natural gas liquefaction plant temporarily closed during the months of May, July and August 2021 (Banco Central de Reserva del Perú, 2023^[2]). In the Plurinational State of Bolivia, production continued to trend lower as existing fields are depleted. Export volumes also decreased due to lower demand in Argentina and Brazil.

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on data from the U.S. Energy Information Administration (EIA) and Annual Statistical Bulletin 2023, Organization of the Petroleum Exporting Countries (OPEC).

Against this backdrop, hydrocarbon revenues in the LAC region registered a marked increase in 2022. Total fiscal revenues from oil and gas exploration and production – upstream activities – reached USD 115.5 billion for the year, roughly double the 2021 level of USD 58.4 billion (Table 2.2). Relative to GDP, revenues reached an average of 4.4% of GDP (compared with 2.6% of GDP in 2021), bolstered by an exceptionally strong increase in Trinidad and Tobago (+6.9 percentage points of GDP year-on-year). Non-tax revenues, principally related to royalties and other related payments associated with the commercial value of production, reached 3.5% of GDP (compared to 2.3% of GDP in 2021) with significant increases in most countries, especially in Guyana. Tax revenues also registered significant dynamism, especially in Trinidad and Tobago.

Note: Revenue-to-GDP ratios for Latin America and the Caribbean correspond to a simple average of the countries included in the sample. Figures may not sum due to rounding. Data for Mexico correspond to federal government oil revenue; they exclude own revenues of Pemex, the State-owned oil and gas producer. Data for Ecuador correspond to oil revenues of the non-financial public sector derived from exports of crude oil. Data for Guyana refer to revenues deposited in the Natural Resource Fund.

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on data from ECLAC's Fiscal Revenues from Non-Renewable Natural Resources in Latin America and the Caribbean database.

Hydrocarbon tax revenues were buoyed by a dramatic increase in CIT payments during 2022. Compared with 2021, CIT receipts more than doubled in US dollar terms for several countries in the region (Figure 2.1). Higher production and favourable price dynamics improved profitability and led to greater advance tax payments for fiscal year 2022. Operating income at Ecopetrol rose significantly in US dollar terms (+79%) (Ecopetrol, 2023^[3]). Likewise, operating income at Petrobras rose 52% in US dollar terms, building on a 274% increase in 2021 (Petrobras, 2022^[4]; Petrobras, 2023^[5]). Strong profits in 2021 also led to an increase in payments for annual tax filings made in 2022, as estimated tax payments paid during fiscal year 2021 fell short of year-end tax liabilities.

Figure 2.1. Latin America and the Caribbean (5 countries): Year-on-year variation in general government CIT receipts from oil and gas exploration and production, 2021-2022

StatLink  <https://stat.link/xpqlidi>

Non-tax hydrocarbon revenues, which make up the bulk of oil and gas revenues in most countries, also grew strongly. Payments of royalties and other participations in the commercial value of production surged in US dollar terms, and in some countries exceeded the increase in the annual average spot price of Brent (Figure 2.2).

This dynamic was particularly apparent in Guyana and Trinidad and Tobago. In Guyana, oil output continues to expand rapidly; the principal driver of higher revenues was production as new fields are being brought online. Higher hydrocarbon production was also a determining factor of strong revenue growth for Brazil, Mexico and Peru. In Colombia, the strong outturn also reflected a more than tripling of the payments for the government's participation in production, which is determined by the price of Western Texas Intermediate and thresholds specified in the contracts with producers (ANH, 2023^[6]). In contrast to other countries, the impulse to royalties in Trinidad and Tobago was purely from prices as hydrocarbon production largely slipped during the year.

Figure 2.2. Latin America and the Caribbean (10 countries): Year-on-year variation in general government non-tax revenues from oil and gas exploration and production, 2021-2022

Percentage points of GDP and percentages based on US dollars

StatLink  <https://stat.link/6cyame>

Other non-tax revenues were also significant in some countries. In Brazil, dividend payments by Petrobras to the federal government reached 0.6% of GDP (compared with 0.2% of GDP in 2021). This was complemented by an additional 0.1% of GDP in signing bonuses from the second transfer-of-rights production sharing auction that was held in December 2021 (Tesouro Nacional, 2023^[77]). In Colombia, dividend payments by Ecopetrol to the Treasury reached 1.1% of GDP, compared with less than 0.1% of GDP in 2021, reflecting high profits during the previous year and the issuance of an extraordinary dividend paid in June (Ecopetrol, 2023^[3]; Ministerio de Hacienda y Crédito Público de Colombia, 2023^[8]). In the case of Trinidad and Tobago, the country received extraordinary payments, equivalent to 0.9% of GDP, within the framework of an agreement between the country and major producers, such as British Petroleum (BP) and Royal Dutch Shell, to settle past obligations (Central Bank of Trinidad and Tobago, 2023^[9]).

Mining revenues rose modestly in 2022 amidst weakening prices and lower production volumes

Markets for metals and minerals in 2022 were buffeted by the war in Ukraine and rising uncertainty about global economic conditions. During the first half of the year, prices for many metals and minerals continued their upwards momentum, building on the sharp increase experienced in 2021 as economic activity rebounded. However, this rally was cut short as industrial production slowed and market participants became increasingly wary of the deterioration of global macroeconomic fundamentals. Markets were significantly impacted by COVID-19 lockdowns in China, which disrupted domestic industrial production, as well as the downturn in the real estate market. Prices for most industrial metals and minerals ended the year in negative territory (Figure 2.3). While prices for iron ore fell (-25%) they experienced a high level of volatility during the year, reaching a high in March as a response to the invasion of Ukraine – one of the largest exporters of the mineral – before sliding as residential construction and steel production declined in China.

Figure 2.3. Year-on-year variation of international spot prices for selected minerals and metals, 2021-2022

Percentage

StatLink  <https://stat.link/xrlvp2>

However, market dynamics also drove prices up for some metals and minerals during the year. The surge in natural gas prices, which was further fueled by the war in Ukraine and the subsequent economic sanctions imposed on the Russian Federation, prompted coal prices to more than double. Spot prices for

Australian coal peaked at a record high of USD 431 per metric ton in September before trending lower in the fourth quarter of the year. Prices for nickel also posted continued strength mainly due to lower supply caused by disruptions in production in the Russian Federation and higher demand as traders made large purchases to cover short positions (LME, 2023^[10]). Strong lithium demand for battery production and tight supply gave rise to a quadrupling in prices.

Mineral output in Latin America and the Caribbean generally trended lower in 2022 (Table 2.3). Copper production in Chile, the world's largest producer, contracted 5.2%, driven in large part by a 10.4% decline in output at Codelco because of lower ore grades and the depletion of existing mines (Codelco, 2023^[11]). In contrast, production of copper expanded in Peru largely due to the initiation of production at the Quellaveco mine and increased output at the Cerro Verde mine, which compensated for lower production at other mines due to social conflicts (Banco Central de Reserva del Perú, 2023^[2]).

Production of other industrial metals such as zinc, lead and tin also declined in most countries. Iron ore output also contracted, largely due to disruptions to production in Brazil caused by heavy rainfall (Vale, 2023^[12]). Silver output contracted significantly among the largest producers, particularly in Mexico and Peru. Gold production also fell, but higher output in Mexico and the Plurinational State of Bolivia partially offset the decline.

Source: Economic Commission for Latin America and the Caribbean (ECLAC), on the basis of Instituto Nacional de Estadísticas del Estado Plurinacional de Bolivia; Agência Nacional de Mineração do Brasil; Comisión Chilena de Cobre (Cochilco); Agencia Nacional de Minería de Colombia; Oficina Nacional de Estadística de la República Dominicana; Banco Central del Ecuador; Instituto Nacional de Estadística y Geografía de México; Banco Central de Nicaragua, Instituto Nacional de Estadística e Informática de Perú; Energy Institute; and, United States Geological Survey, Mineral Commodities Summaries: Bauxite and Alumina, 2024.

A defining feature of metals and minerals production in the region for 2022 was the solid growth in lithium output. Argentina, Brazil, and Chile accounted for 36% of global lithium production during the year and an estimated 53% of reserves (Energy Institute, 2023^[13]). However, among these countries, only Chile currently stands out as a major producer, representing 30% of global output alone. Lithium output in Chile was propelled in 2022 by a 50% increase in production capacity by SQM, the country's principal producer (SQM, 2023^[14]). Production in Argentina is also ramping up, with six projects under construction in 2022 and a large number under consideration¹. In contrast, lithium carbonate output in the Plurinational State of Bolivia remains limited, despite having potentially the largest reserves of lithium in the world (Ministerio de Minería y Metalurgia de Bolivia, 2023^[15]; USGS, 2024^[16]).

Despite the softening of international prices and generally lower production levels, fiscal revenues from mining rose in the LAC region in 2022. Total mining revenues reached USD 30.4 billion (up 11% from the 2021 level of USD 27.4 billion) (Table 2.4). However, this increase was largely due to the exceptional outturn in Colombia, which was bolstered by high coal prices and rising production. In relative terms, mining revenues averaged 0.75% of GDP (up from 0.67% of GDP in 2021). Mining tax revenues remained dominant, averaging 0.47% of GDP (compared to 0.42% of GDP in 2021) propelled by increases in Colombia, Peru and the Plurinational State of Bolivia. Non-tax revenues, largely payments of royalties tied to the commercial value of production, were impacted by price and production dynamics in some countries. However, the regional average benefitted from a surge in lithium payments in Chile and greater coal royalties in Colombia.

Note: Revenue-to-GDP ratios for Latin America and the Caribbean corresponds to a simple average of the countries included in the sample. Figures may not sum due to rounding. In the case of Chile, lithium revenues refer to property rents received by the central government from the participation of the State in lithium sales as established in contracts with SQM Salar S.A. and Albemarle Ltda.

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on data from ECLAC's Fiscal Revenues from Non-Renewable Natural Resources in Latin America and the Caribbean database.

The regional increase in tax revenues was driven by higher CIT payments in Colombia, Ecuador, Peru and the Plurinational State of Bolivia (Figure 2.4). The increase in the Plurinational State of Bolivia reflected large annual tax filing payments as profits in the sector rose sharply in 2021 due to surging prices for tin and zinc. Minera San Cristóbal, the principal private zinc mining company in the country, registered its highest profits since 2017 in 2021, a marked improvement over the financial loss reported in 2020 (Minera San Cristóbal, 2023_[17]). Payments for annual tax filings also boosted CIT receipts in Peru, especially in the first half of the year. Income tax payments in 2022 for the annual tax filing season for fiscal year 2021 reached an all-time high in the country, with the mining sector representing 43% of the total². However, CIT revenues from the sector for the year rose less dramatically, due largely to the high base of comparison with the 4th quarter of 2021, when mining companies made substantial extraordinary payments to address outstanding tax liabilities (Ministerio de Economía y Finanzas del Perú, 2023_[18]). In Colombia, there was a similar uptick in CIT receipts for the annual tax campaign, reflecting both higher profits from the dramatic increase in the price of coal as well as advance payments for fiscal year 2022.

Figure 2.4. Latin America and the Caribbean (11 countries): Year-on-year variation in general government CIT receipts from mining, 2021-2022

Percentage points of GDP and percentages based on US dollars

StatLink  <https://stat.link/q17286>

Non-tax revenues from mining in 2022 were impacted by weakening prices and, in some cases, lower production (Figure 2.5). In Brazil, payments of the federal royalty as well as state-level payments based on the commercial value of production dipped as iron ore prices fell over the year. Likewise, royalty receipts in Peru slipped, but this was also influenced by extraordinary payments in 2021 to liquidate outstanding liabilities by two major mining companies. While price and production influenced royalty payments, declines in some countries were the result of one-off events. In the Dominican Republic, receipts were impacted by prepayments made by Barrick Gold for the years 2021-2023 during 2020 to support COVID-19 relief efforts in the country³. Payments of the bauxite levy in Jamaica declined due to a major fire that led to the closure of the Jamalco alumina refinery in August 2021 (Ministry of Finance and the Public Service of Jamaica, 2023^[19]). Limited production commenced in August 2022 with the intention to reach regular levels by the end of 2023.

Figure 2.5. Latin America and the Caribbean (11 countries): Year-on-year variation in general government mining non-tax revenues, 2021-2022

Percentage points of GDP and percentages based on US dollars

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on data from ECLAC's Fiscal Revenues from Non-Renewable Natural Resources in Latin America and the Caribbean database.

StatLink  <https://stat.link/3cahmy>

In contrast, non-tax revenues rose strongly in Chile, Colombia and Ecuador in 2022. In Chile, the year-on-year increase was the result of the interplay between falling copper-related revenues and a dramatic upswing in lithium-related payments to the central government. Falling copper prices led to lower receipts of the special contribution paid by Codelco on the USD value of its exports⁴. Additionally, payments of dividends by Codelco to the Treasury fell sharply to 0.1% of GDP (compared with 0.6% of GDP in 2021) (Codelco, 2023^[20]). However, these losses were more than compensated by the State's participation in the sales of lithium products by SQM Salar S.A. and Albemarle Limitada, which generated revenues equivalent to 1% of GDP (DIPRES, 2023^[21]). In Colombia, royalties associated with coal mining continued to expand significantly in line with the strong growth in prices and an uptick in production. Higher gold production and exports in Ecuador drove royalty payments higher. This was complemented by profit-sharing payments made by mining concessionaires to the Treasury that were equivalent to 0.1% of GDP.

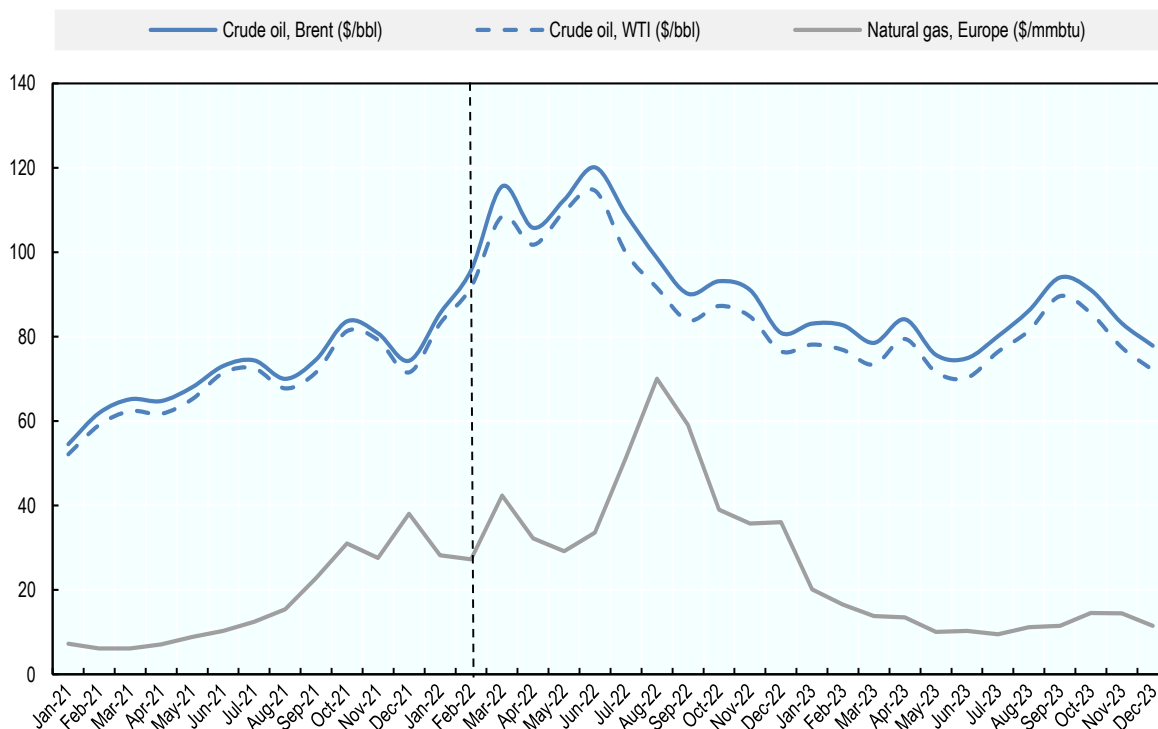

Uncertainty and price volatility strongly impacted fiscal revenues from non-renewable natural resources in the LAC region during 2023

Increasing uncertainty about macroeconomic trends in a high interest rate environment weighed on energy markets during early 2023. Industrial production in advanced economies slowed sharply and even

contracted in some European countries, particularly Germany. Economic output also proved sluggish in China; growth in the second quarter significantly undershot market expectations. Against this backdrop, prices in June for Brent and Western Texas Intermediate declined 38% and 39% year-on-year, respectively, while spot prices for natural gas in Europe contracted sharply (-69%) (Figure 2.6).

Figure 2.6. International spot prices for selected energy commodities, January 2021 – December 2023

US dollars per barrel and US dollars per million BTUs

StatLink  <https://stat.link/nygx02>

Price dynamics during the first half of the year were also shaped by persistent oversupply conditions. Although consumption rebounded strongly, production continued to outpace demand. In response to this situation, several members of the Organization of Petroleum Exporting Countries and allied countries (OPEC+) announced voluntary production cuts of 1.66 million barrels per day between May and the end of the year⁵. In July, Saudi Arabia announced an additional voluntary cut of 1 million barrels per day; the Russian Federation also committed to a reduction in its oil exports.

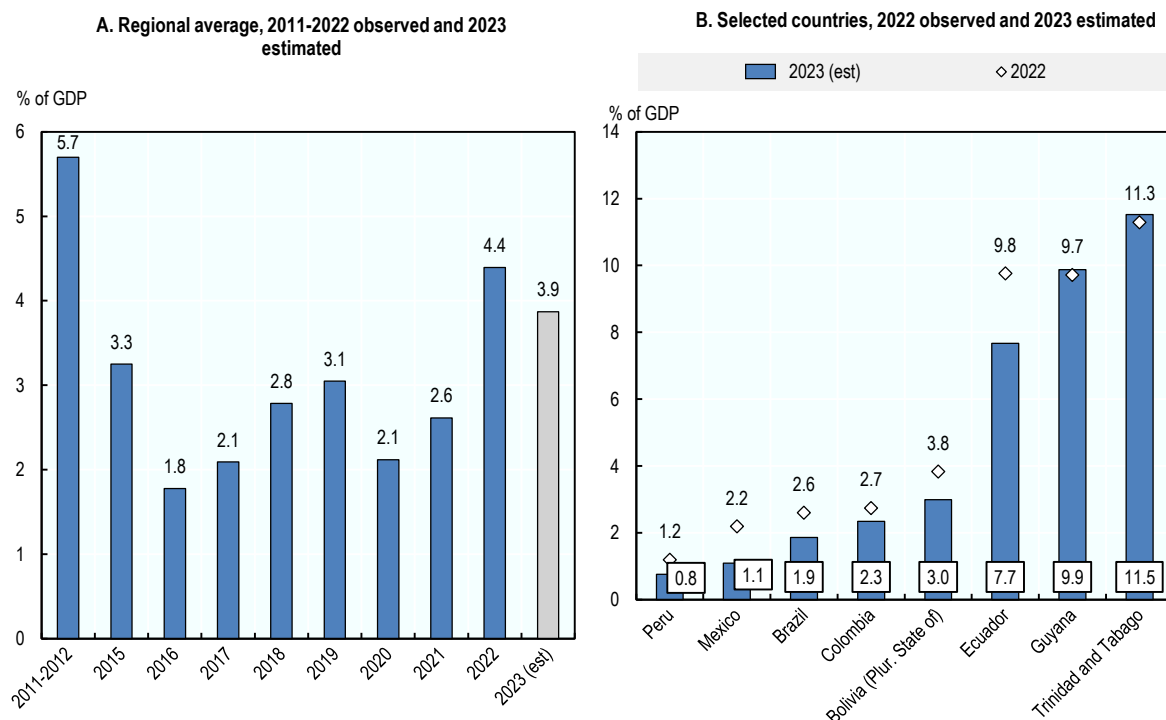

Global oil markets exhibited significant volatility in the second half of 2023. Economic activity in the United States surpassed expectations during the third quarter. Likewise, consumption in China rose sharply, propelled by a large increase in petrochemical output and a rebound in transportation after lifting COVID-19 restrictions in 2022. Oil prices rallied in the third quarter reflecting changing market sentiment; Brent reached USD 94 per barrel in September, compared to USD 74.89 in June (+26%). However, these gains were largely reversed by year's end as production in the United States and Brazil reached record levels and production in the Islamic Republic of Iran hit a five-year high (IEA, 2023^[22]).

The escalation of the conflict between Israel and Hamas after the 7 October attacks intensified uncertainty in global markets in the fourth quarter of the year. While international oil prices continued to trend lower, natural gas prices in Europe increased. Natural gas prices on the continent were significantly impacted by the shutdown of a coastal gas field in Israel and an explosion of pipeline infrastructure in the Baltic Sea (World Bank, 2023^[23]). Disruptions to tanker traffic in the Red Sea also exerted pressure on oil prices, but this proved to be transitory and was offset by slowing global oil demand and increased output in the fourth quarter of the year.

Hydrocarbon revenues in the LAC region fell in 2023 in line with market conditions. General government revenues from oil and gas exploration and production activities averaged an estimated 3.9% in 2023 (down from 4.4% of GDP in 2022) (Figure 2.7). Non-tax revenues from royalties and other participations in the commercial value of production, which make up the bulk of revenues in the region, declined in most countries due to the fall in oil prices. In Brazil, record production attenuated the fall in payments of royalties and special participations but could not offset the halving of dividends paid by Petrobras to the federal government. While oil output increased in Mexico, revenues in national currency tumbled due to the appreciation of the Mexican peso and the deferral to 2024 of Pemex's profit-sharing duty payments for the months of October and November.⁶

Figure 2.7. Latin America and the Caribbean (10 countries): General government revenues from oil and gas exploration and production, 2013 – 2023

Percentage of GDP

Note: 10 countries include Argentina, Bolivia (Plurinational State of), Brazil, Colombia, Ecuador, Guatemala, Guyana, Mexico, Peru, and Trinidad and Tobago. Data for Mexico correspond to federal government oil revenue, they exclude own revenues of Pemex, the State-owned oil and gas producer. In Ecuador to oil revenues of the non-financial public sector derived from exports of crude oil. In Guyana to revenues deposited in the Natural Resource Fund. Regional average refers to simple average. Figures for 2023 are based on official sources, forecasts and estimates based on the 2023 annual variation in representative products applied to revenues in 2022.

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on data from ECLAC's Fiscal Revenues from Non-Renewable Natural Resources in Latin America and the Caribbean database.

StatLink  <https://stat.link/oem8xs>

Lower production of oil and gas aggravated the impact of lower prices on non-tax revenues in some countries. A marginal reduction in oil output in Ecuador combined with the decline in the export price led to a sharp contraction in oil revenues as a share of GDP; being a dollarised economy, these price shocks are not buffered by movements in the exchange rate (Ministerio de Economía y Finanzas del Ecuador, 2024^[24]). Although production of crude oil contracted significantly in Trinidad and Tobago, royalty revenue surged, in part due to production-sharing contract payments related to the previous year, when prices were high. In the Plurinational State of Bolivia, hydrocarbon revenues fell due to the progressive depletion of existing fields reducing natural gas production and declining demand lowering exports to Brazil (Banco Central de Bolivia, 2023^[25]).

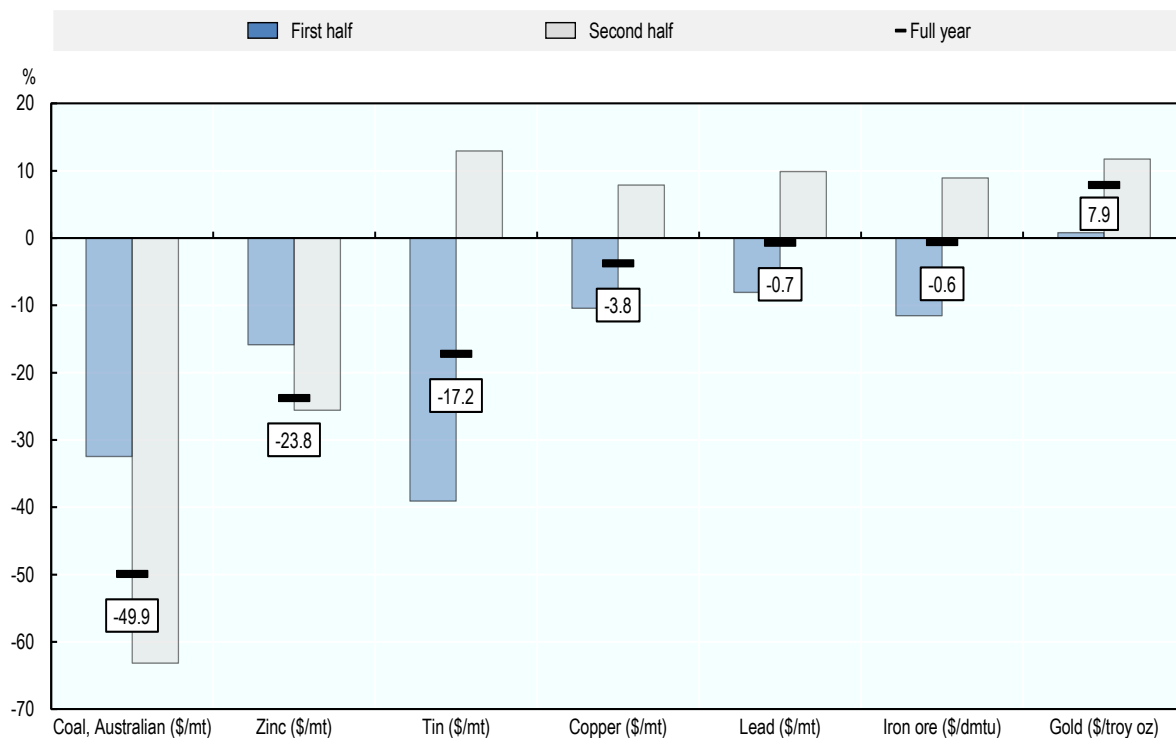

Hydrocarbon tax revenues generally trended lower in 2023 as the decline in international prices impacted profit margins. CIT receipts contracted in Brazil and Peru because of lower payments from annual tax declarations for fiscal year 2022 and a decline in estimated tax payments for fiscal year 2023 (Receita Federal, 2024^[26]; Ministerio de Economía y Finanzas del Perú, 2024^[27]). A similar dynamic occurred in Trinidad and Tobago, where CIT payments, which constitute a significant share of total revenues from oil, contracted sharply as price swings impacted profit margins. In contrast, CIT receipts in Colombia were robust in the face of lower prices due in large part to the structural tax reform approved in late 2022⁷. Most notably, the reform set the CIT rate to 35% and included several provisions specifically targeting the oil and gas sector. Hydrocarbon producers must now pay a CIT surcharge that ranges from 5 percentage points to 15 percentage points depending on the price level. Royalty payments are also no longer deductible from the CIT⁸.

The factors that roiled energy markets in 2023 also affected global markets for minerals and metals. The deceleration of industrial production in advanced economies and weak residential construction in China prompted a significant correction in the prices of a wide range of minerals and metals during the first half of the year (Figure 2.8). However, prices rebounded in the second half of the year.

Imports of copper concentrates and refined copper in China grew strongly, supported by rising investments in the country's electricity sector, supporting a recovery in copper prices. Iron ore prices also recovered because year-end steel production caps in China, which reduced output in prior years, were not enforced. Gold prices also rallied in part due to the escalation of the conflict between Israel and Hamas after the 7 October attacks. In contrast, prices for thermal coal fell markedly because higher supply from Australia and Indonesia outpaced demand growth. Lithium prices, which surged in 2022, plummeted due to oversupply in the market.

Figure 2.8. Year-on-year variation of international spot prices for selected minerals and metals, 2022-2023

Percentage

StatLink  <https://stat.link/5mdip9>

Fiscal revenues from mining in Latin America and the Caribbean were affected by trends in global markets and domestic production. Mining revenues are estimated to have fallen to 0.53% of GDP (compared to a high of 0.75% of GDP in 2022) (Figure 2.9). Lower prices dragged down non-tax revenues from royalties tied to the commercial value of production in most countries. However, lithium payments in Chile remained strong despite the decline in prices. The principal driver of lower mining revenues was a collapse in CIT payments in Brazil, Chile and Peru. Advance CIT payments made in 2022 were higher than year-end tax liabilities in some cases, leading to a significant decline in annual tax payments made in 2023 (DIPRES, 2024^[28]; Receita Federal, 2024^[26]). Advance tax payments in 2023 were lower as taxpayers made use of 2022 overpayments to cover their estimated liabilities (Ministerio de Economía y Finanzas del Perú, 2024^[27]).

Figure 2.9. Latin America and the Caribbean (12 countries): General government fiscal revenues from mining, 2011-2023

Percentage of GDP

Note: 12 countries include Argentina, Bolivia (Plurinational State of), Brazil, Chile, Colombia, Dominican Republic, Ecuador, Guatemala, Jamaica, Mexico, Nicaragua, and Peru. In the case of Chile, lithium revenues refer to property rents received by the central government from the participation of the State in lithium sales as established in contracts with SQM Salar S.A. and Albemarle Ltda. Regional average refers to simple average. Figures for 2023 are based on official sources, forecasts and estimates based on the 2023 annual variation in representative products applied to revenues in 2022.

- ⁸ In November 2023 the Colombian Supreme Court ruled against the non-deductibility of royalties (decision C-489 of 2023). However, advanced payments for fiscal year 2023 were already made during the year based on the non-deductibility of royalties. The Ministry of Finance projects that taxpayers will claim these overpayments on their tax filings in 2024, depressing income tax revenues for that year (Ministerio de Hacienda y Crédito Público de Colombia, 2024^[29]).

3 Equivalent fiscal pressure in Latin America and the Caribbean (1990-2021): Updating the enlarged map of the region's fiscal revenues

Introduction to Equivalent Fiscal Pressure (EFP)

The tax burden is a crucial variable for public policies, defined as the amount of financial resources – as a percentage of the gross domestic product (GDP) – that a country raises through taxes and contributions to public social security arrangements to finance public spending. However, other sources of public revenues and alternative configurations of the basic functions of the State exist in different countries, which could affect the comparability of tax burden indicators.

For example, the availability of natural resources – whether renewable or non-renewable – may allow governments to supplement public finances by raising revenues through non-tax instruments such as royalties or dividends and interests, revenues not computed in the tax burden ratio. This is the case for certain hydrocarbon and mineral resources, of great relevance in several Latin American and Caribbean (LAC) countries, as well as the management of other infrastructure, such as the the Transoceanic Canal in Panama or the hydroelectric power stations of Itaipú and Yacyretá in Paraguay.

In a similar vein, in the areas of health and social security, some countries implement private schemes of individual capitalisation – of a mandatory nature, established in legislation – that replace, complement or compete with the public social security system. These private social security contributions, although not included in public financing and administered by private entities, are part of the overall amount of resources that are compulsory and collectively mobilised; their consideration allows for more homogeneous comparisons between countries.

In order to take into account these alternative ways to finance public spending, this chapter discusses the concept of 'Equivalent Fiscal Pressure' (EFP), which includes two additional sources of revenue beyond those traditionally considered (tax revenues including public social security contributions [SSCs]), which also represent a fiscal effort required from taxpayers when they are mandatory: contributions to a private social security system (pensions and health) and non-tax revenues (dividends, royalties, among others) from the exploitation of natural resources. .

Consideration of all these additional components (when official data are available) helps nourish and enrich analyses of fiscal conditions in LAC countries. However, the EFP indicator does not invalidate or contradict conventional measures of public financing. Rather, the aim is to expand the possibilities for regional and international comparison and to provide new elements that are, at least for the specific context in LAC, crucial to a broad and comprehensive perspective of these issues¹.

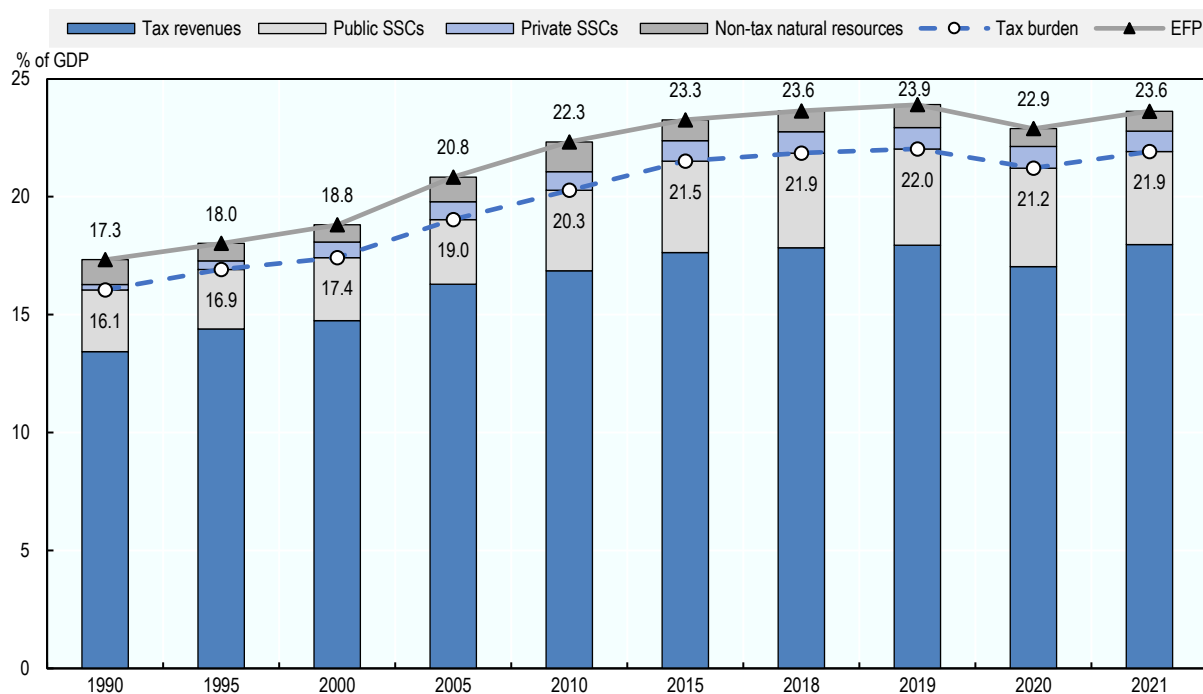

Evolution of Equivalent Fiscal Pressure in the LAC region

The analysis in this chapter, as well as regional and sub-regional averages cited herein, refer to 25 of the 27 countries for which data appears in this publication, and does not include Cuba and Venezuela². The revenue indicators are not directly comparable with the results shown in Chapter 1, as it is based on data available prior to the publication of this report.

The tax-to-GDP ratio (which includes tax revenues and public SSCs) for the LAC countries considered in this chapter stood at 21.9% of GDP in 2021 (Figure 3.1). The additional revenues accounted for using the EFP methodology increase this ratio by 1.7% of GDP, bringing the total to 23.6% of GDP.

On average across the LAC region, social security contributions to private systems amounted to 0.9% of GDP in 2021, a value that has increased by 0.6 percentage points (p.p.) since 1990 and that has been stable over the five years up to and including 2021. Meanwhile, non-tax public revenues from natural resources amounted to 0.8% of GDP in 2021, a contraction of 0.3 p.p. since 1990, with an even greater decline relative to the figures recorded for such revenues in 2008 and 2013 (1.5% of GDP)

Figure 3.1. Equivalent Fiscal Pressure in Latin America and the Caribbean, 1990-2021

Note: Data refers to the simple average of the 25 LAC countries included in this publication excluding Cuba and Venezuela due to data issues.
Source: Prepared by the authors based on data in (IDB-CIAT, 2023^[1]).

StatLink  <https://stat.link/24wik0>

As regards the composition of EFP, the share of tax revenue (including public social security contributions) has remained relatively stable since 1990. In 2021, it accounted for 92.8% of total EFP; excluding public SSCs, this proportion has fluctuated around 75% throughout the period. Private SSCs have increased their share since their implementation in several countries across the region in the 1990s, and in 2021 they accounted for 3.7% of the LAC region's EFP. The share of non-tax revenues from natural resources was 3.6% of the EFP in 2021 but has been more volatile within the structure of the EFP over time.

Evolution of EFP by country

Individual countries in the LAC region show a high degree of heterogeneity in terms of the evolution and level of tax revenues and EFP (Figure 3.2). Although tax revenues have increased in all the countries analysed between 1990 and 2021 with the exceptions of Panama and Trinidad and Tobago, the magnitude of the change has been very uneven, with particularly large increases in Argentina (+13.7 p.p.), Bolivia (+13.0 p.p.), Ecuador (+12.1 p.p.) and El Salvador (+11.7 p.p.).

Similar trends can be noted with respect to EFP levels. With the exception of Panama and Trinidad and Tobago (where EFP fell by 2.4 p.p. and 2.5 p.p., respectively, between 1990 and 2021), all countries in the region show an increase in this indicator. The increases of Argentina (+16.2 p.p.), El Salvador (+15.3 p.p.), Ecuador (+13.0 p.p.), Bolivia (+12.5 p.p.), Dominican Republic (+10.2 p.p.) and Colombia (+9.8 p.p.) stand out.

Figure 3.2. Tax Burden and Equivalent Fiscal Pressure, Latin American and Caribbean (1990 and 2021)

Note: Countries were ordered from highest to lowest according to the level of the Equivalent Fiscal Pressure (EFP) in 2021. For countries marked with an asterisk (*) there is no data for 1990. In these cases, both for tax revenues and EFP, the first year with available information was used as a reference, namely: 1991 in Antigua and Barbuda and Nicaragua; 1992 in Saint. Lucia; and 1993 in Ecuador. This figure does not present the cases of Cuba (according to official figures, in 1990, the EFP stood at 29.1% of GDP and in 2021 it was 17.7%) or Venezuela (due to lack of official information from 2016 to date), although the figures collected can be consulted in the updated EFP database (see the Statistical annex at the end of this chapter).

Source: Prepared by the authors with data from the Equivalent Fiscal Pressure for Latin America and the Caribbean 1990-2021 (IDB-CIAT, 2023^[11]).

Figure 3.2 ranks countries according to the level of their EFP in 2021. This ranking differs from when countries are ordered according to the level of tax revenues, due to significant gaps between the respective indicators for some countries in particular, as can be appreciated in Figure 3.3.

Figure 3.3. Non-tax revenues from natural resources and private SSCs components of Equivalent Fiscal Pressure, Latin American and Caribbean Countries, 2021

As percentage of GDP (left axis) and percentage of total tax revenues (right axis)

Source: Prepared by the authors with data from the Equivalent Fiscal Pressure for Latin America and the Caribbean 1990-2021 (IDB-CIAT, 2023^[1]).

StatLink <https://stat.link/n4zlt5>

In two countries, mandatory private social security contributions and non-tax revenues from natural resources (which are included in the EFP indicator but not in the tax-to-GDP ratio) amounted to more than 5% of GDP in 2021: Chile (5.9% of GDP) and Mexico (5.5% of GDP). In four countries, they amounted to more than 3% of GDP (El Salvador, Bolivia, Panama and Uruguay); and in another four countries more than 2% of GDP (Colombia, Peru, Dominican Republic and Argentina). In contrast, there is a set of countries (mostly in the Caribbean) where these revenues are practically nil.

In relative terms as regards the tax-to-GDP ratio, considering compulsory private SSCs and non-tax natural resources substantially changes the picture for comparison among countries. Most notably, the EFP is 33.5% higher than the tax-to-GDP ratio in Mexico, 26.4% higher in Chile and 25.6% higher in Panama.

By subsets of countries, considering EFP instead of the tax-to-GDP ratio significantly increases the average for Mercosur+Chile+Mexico (+3.3% of GDP and 13.6% more resources) while the figures for other sub-regions remain practically unchanged (notably among Caribbean countries). The average EFP for all LAC countries considered is 1.7 p.p. of GDP higher than the tax-to-GDP ratio (or 7.8% higher).

The balance between the additional contribution of compulsory private SSCs and non-tax natural resources also varies among countries. Private SSCs account for the bulk of the additional resources in Chile, El Salvador, Uruguay, Dominican Republic and Costa Rica, while non-tax revenues from natural resources do so in Mexico, Bolivia, Panama, Trinidad and Tobago, Brazil, Paraguay, Ecuador and Nicaragua.³

Final Comments

Countries' different approaches to designing and structuring public spending and, in particular, how these approaches are financed, can lead in some specific cases to misleading or biased interpretations of the indicators and ratios generally used to evaluate their dimensions and economic effects. EFP aims to complement the benchmark tax-to-GDP ratio for countries that adopt significantly different options, as is the case of LAC countries, to raising public revenues from natural resources (tax or non-tax instruments) or to collecting compulsory contributions to social security systems (public and private schemes).

Notes

¹ For more detail about the methodological basis of the EFP and previous analysis of the figures available during the last decade, refer to the IDB-CIAT Revenue Collection database webpage (<https://www.ciat.org/idb-ciat-revenue-collection-database/?lang=en>) and (Barreix et al., 2013^[2]). The figures used in this chapter are based on Morán and Solera (2023). The chapter updates previous analysis of EFP, prior to the COVID-19 pandemic, contained in the 2020 edition of this report (OECD et al., 2020^[4]).

² In the case of Cuba, a recent monetary reform and the inflation triggered by the COVID-19 pandemic led to a sharp increase in nominal GDP between 2020 and 2021 (a more than five-fold increase in nominal terms) and created a structural break in the country's tax level and structure. This resulted in an unprecedented drop in EFP from 37.5% percent of GDP in 2020 to 17.7% of GDP in 2021, which is mainly explained by the drop in the sales tax rate and the reclassification of extraordinary revenues as non-taxable. In a medium-term analysis, this would undoubtedly introduce an artificial bias in the averages calculated for the region as a whole. In the case of Venezuela, no official data are available since 2016. However, figures compiled at the individual level are included (in Cuba until 2021 and in Venezuela until 2015), which are made available to interested users in the EFP online database. There is also no official statistical information available for certain countries in particular years, namely: Antigua and Barbuda (1990), Ecuador (1990-92), Nicaragua (1990) and Saint Lucia (1990-91).

³ Detailed figures can be found in the statistical annex at the end of the chapter while methodology and sources of information may be consulted in (Morán and Solera, 2023^[3]).

4 Tax levels and tax structures, 1990-2022

In all of the following tables a (..) indicates not available. The main series in this volume cover the years 1990 to 2022.

Figures referring to 1991-99, 2001-04, 2006-09, 2011-16 in Tables 4.1 to 4.2 and Tables 4.15 to 4.17, figures relating to 1991-99, 2001-09 and 2011-20 in Tables 4.5 to 4.10 and figures relating to 1990-94, 1996-99 and 2001-21 in Tables 4.11 to 4.13 have been omitted because of lack of space. Complete series are, however, available on line at www.latameconomy.org and in the database OECD (2024), "Revenue Statistics in Latin America and the Caribbean: Comparative tables", *OECD Tax Statistics*, <http://dx.doi.org/10.1787/data-00641-en>.

.. Not available

Note: The figures exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), the Bahamas, Barbados, Cuba (except for 2002-2012), the Dominican Republic, Saint Lucia, Trinidad and Tobago and Venezuela as the data are not available. Local government revenue data have been available since 1991 for Nicaragua, since 1994 for Bolivia, since 1995 for Guatemala, since 1998 for Jamaica, since 1999 for Panama, since 2000 for Peru, since 2002 for El Salvador and Guyana, since 2006 for Paraguay and since 1990 for all other countries.

1. The data include the following estimations: Antigua and Barbuda (social security contributions for 2019-2022), the Bahamas (social security contributions for 2021 and 2022), Ecuador (local tax revenues for 2021 and 2022), Nicaragua (local tax revenues for 2022), Panama (local tax revenues and social security contributions for 2022), Saint Lucia (social security contributions for 2021 and 2022) and Uruguay (local tax revenues for 2022). See the corresponding country tables for more information.
2. Figures in and after 2021 are not comparable to data in previous years due to large changes as a result of Cuba's currency reform.
3. Some tax revenue data are not available between 2014 and 2017 and therefore total figures have not been included. Data for 2018 and subsequent years are not available.
4. Represents the group of 26 Latin American and Caribbean countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data issues. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38) group.
5. Calculated by applying the unweighted average percentage change for 2022 in the 36 countries providing data for that year to the overall average tax to GDP ratio in 2021.

Table 4.2. Total tax revenue in millions of USD at market exchange rates, 1990-2022

.. Not available

Note: The figures exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), the Bahamas, Barbados, Cuba (except for 2002-2012), the Dominican Republic, Saint Lucia, Trinidad and Tobago and Venezuela as the data are not available. Local government revenue data have been available since 1991 for Nicaragua, since 1994 for Bolivia, since 1995 for Guatemala, since 1998 for Jamaica, since 1999 for Panama, since 2000 for Peru, since 2002 for El Salvador and Guyana, since 2006 for Paraguay and since 1990 for all other countries.

1. The data include the following estimations: Antigua and Barbuda (social security contributions for 2019-2022), the Bahamas (social security contributions for 2021 and 2022), Ecuador (local tax revenues for 2021 and 2022), Nicaragua (local tax revenues for 2022), Panama (local tax revenues and social security contributions for 2022), Saint Lucia (social security contributions for 2021 and 2022) and Uruguay (local tax revenues for 2022). See the corresponding country tables for more information.
2. Figures in 2021 and thereafter are not comparable to data in previous years due to large changes as a result of Cuba's currency reform.
3. Some tax revenue data are not available between 2014 and 2017 and therefore total figures have not been included. Data for 2018 and subsequent years are not available.

Note: The figures exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), the Bahamas, Barbados, Cuba (except for 2002-2012), the Dominican Republic, Saint Lucia, Trinidad and Tobago and Venezuela as the data are not available. Local government revenue data have been available since 1991 for Nicaragua, since 1994 for Bolivia, since 1995 for Guatemala, since 1998 for Jamaica, since 1999 for Panama, since 2000 for Peru, since 2002 for El Salvador and Guyana, since 2006 for Paraguay and since 1990 for all other countries.

1. Revenues from social security contributions are estimated in the following countries: Antigua and Barbuda (2019-2022), the Bahamas (2021 and 2022), Panama (2022) and Saint Lucia (2021 and 2022).
2. Figures in 2021 and thereafter are not comparable to data in previous years due to large changes as a result of Cuba's currency reform.
3. Figures for 1990-98 are estimated by the Direction General of Taxes as the methodology they use to calculate social security contributions was not employed until 1999.
4. Some tax revenue data between 2014 and 2017 are not available. In those years data as % of total tax revenue cannot be calculated. Data for 2018 and subsequent years are not available.
5. Represents the group of 26 Latin American and Caribbean countries included in this publication and excludes Cuba (up to 2020) and Venezuela due to data issues. Chile, Colombia, Costa Rica and Mexico are also part of the OECD (38) group.
6. Represents the unweighted average for OECD member countries.

.. Not available

Note: The figures exclude local government revenues for Antigua and Barbuda, Argentina (but include provincial revenues), the Bahamas, Barbados, Cuba (except for 2002-2012), the Dominican Republic, Saint Lucia, Trinidad and Tobago and Venezuela as the data are not available. Local government revenue data have been available since 1991 for Nicaragua, since 1994 for Bolivia, since 1995 for Guatemala, since 1998 for Jamaica, since 1999 for Panama, since 2000 for Peru, since 2002 for El Salvador and Guyana, since 2006 for Paraguay and since 1990 for all other countries.

1. Some tax revenue data between 2014 and 2017 and data for 2018 and subsequent years are not available. The breakdown by sub-sectors of general government is not available for those years.
2. Figures in 2021 and thereafter are not comparable to data in previous years due to large changes as a result of Cuba's currency reform.
3. Revenues from local government are estimated in the following countries: Ecuador (2021 and 2022), Nicaragua (2022), Panama (2022) and Uruguay (2022). See the corresponding country tables for more information.

Source: OECD National Accounts data for Chile, Colombia, Costa Rica and Mexico, the *World Economic Outlook* (IMF) for Barbados, Belize, Saint Lucia, Trinidad & Tobago and Uruguay, and official National Accounts data for Bolivia, Brazil, Ecuador, Paraguay, Peru and Venezuela. For Antigua and Barbuda, Argentina, the Bahamas, Dominican Republic, El Salvador, Guatemala, Guyana, Honduras, Jamaica, Nicaragua and Panama, official national sources were used where available, together with data from the IMF. For Cuba, figures since 1996 have come from Oficina Nacional de Estadística e Información (ONEI), while data before 1996 come from ECLAC/CEPAL. For Bahamas, Barbados, Belize, Saint Lucia and Trinidad and Tobago, GDP figures are reported on a fiscal year basis. For Jamaica, GDP for 1990-2003 are reported on a fiscal year basis, while for other years, they are reported on a calendar year basis.

5 Country tables, 1990-2022 – Tax revenues

In all of the following tables a (“..”) indicates not available. The main series in this volume cover the years 1990 to 2022.

Figures referring to 1991-99, 2001-04, 2006-09 and 2011-16 in Tables 5.1 to 5.27 have been omitted because of lack of space. Complete series are, however, available on line at <http://dx.doi.org/10.1787/data-00641-en>.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures exclude local government tax revenues as the data are not available (but include provincial revenues).

Heading 2000: The figures may be under-estimated as they exclude certain types of social security contributions for which data are not readily available.

Heading 5212: In ECLAC data, property tax on motor vehicles is classified in category 4000.

Heading 5300: The figures are negative as they represent general reimbursements of exports and specific taxes on goods and services.

Heading 6200: The tax debt payments from 2016 include revenue following the implementation of a new voluntary disclosure regime in July 2016 (Law 27260).

.. Not available

Note: Fiscal year ending on 30th June. For example, the data for 2022 represent July 2021 to June 2022.

The data are on a cash basis.

The figures exclude local government tax revenues as the data are not available. Central government tax revenue data are preliminary for 2020-22.

Heading 2000: The data are estimated for 2021 and 2022.

Heading 2400: This heading includes refunds of social security contributions as reported by the National Insurance Board (NIB) before 2020.

Heading 4400: This heading includes all stamp taxes.

Heading 5111: A value added tax was enforced on 1st January 2015.

Note: Year ending 31st March, except for social security contributions which use calendar year. For example, the data for 2022 represent April 2022 to March 2023.

The data are on a cash basis, except for social security contributions which are on an accrual basis.

The figures exclude local government tax revenues as the data are not available.

Heading 1300: This heading includes withholding taxes levied on both individuals and corporate entities.

Heading 2000: Social security contributions refer to contribution income of National Insurance Scheme. The values for 2021 and 2022 are government projections under the best estimate scenario in the 17th Actuarial Review of the National Insurance Fund.

Heading 5213: This heading includes miscellaneous indirect taxes levied on a recurrent basis such as revenues from various licences.

Note: Year ending 31st March. For example, the data for 2022 represent April 2022 to March 2023.

The data are on a cash basis.

The tax revenue data for 2022 represent the government revised estimates for the 2022/23 fiscal year reported in the Approved Estimates of Revenue and Expenditure for Fiscal Year 2023/24.

Heading 2000: Social security contributions refer to total contributions to the Social Security Fund excluding government contributions to the National Health Insurance (NHI) fund. The government contributions are government subsidies to the social security system and hence are not considered as tax revenues according to the OECD classification described in the Interpretative Guide.

Heading 4400: This heading includes all stamp duties.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures exclude local government tax revenues for the period 1990-1993 as the data are not available. Central government tax revenue data are preliminary for 2021 and 2022. Local government tax revenue data and social security contributions are preliminary for 2020-2022.

Heading 1210: Corporate tax under heading 1210 includes revenues from IUE (corporate tax), IUE-RE (corporate tax remittances) and IUM (mining profits). Fiscal notes on corporate tax include fiscal notes on IUE and IUM.

Heading 2000: The figures include social security contributions to Bolivia's pension system and healthcare related funds. Contributions to the pension system between 1997 and 2009 are excluded because Bolivia's pension system was private during this period.

Heading 4210: This heading includes the tax on large fortunes (IGF). This tax is levied on net wealth of natural persons and was introduced in 2020.

Heading 5113: This heading includes IT (transactions tax), its fiscal notes as well as the Special Integrated System of Transition for Entrepreneurs (SIETE-RG).

Heading 5127: This heading includes IVME (tax on the sales of foreign currency).

Heading 6200: Other taxes include revenues from "conceptos varios" (miscellaneous concepts), programa transitorio (transitional programme) and otros ingresos en efectivo (other cash revenue). Fiscal notes on other taxes include fiscal notes on "conceptos varios".

Note: Year ending 31st December.

The data are on a cash basis.

Data in 2021 have been updated with detailed information from Carga Tributária no Brasil by the Secretaria da Receita Federal do Brasil. Data for 2022 are sourced from latest reports of Secretaria do Tesouro Nacional and may be adjusted next year.

Heading 2000: Social security contributions include contributions to the General Social Security Regime (RGPS), contributions to the Own Social Security Schemes (RPPS), contributions to the Severance Indemnity Fund (FGTS) and contributions to the health fund for military police and fire department.

Heading 4400: This heading includes the tax on real estate property transfers (ITBI) levied by the central and state governments.

Heading 5113: Contributions to PASEP are included in contributions to PIS before 2000 as they cannot be distinguished.

Heading 5123: This heading includes tax on exports before 2002.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Includes the reported consolidated revenues of the territorial entities (departments and municipalities).

Heading 1000: The income tax figures in 2022 under headings 1100, 1200 and 1300 are estimated.

Heading 2000: Before 2013, social security contributions did not include all the contributions entering FOSYGA (Solidarity and Guarantee Fund). Only the portion of the contributions used to finance the subsidised regime (up to 1.5 pp of the 12.5% of the monthly wage paid by employers and employees as an obligatory health contribution) was included. The part of the contributions entering FOSYGA to finance the contributory regime was classified in the social security sector as "other incomes". From 2013 onwards, all of the health contributions entering FOSYGA are classified as social security contributions. The portion of the contributions not entering FOSYGA that is both collected and spent by the health insurers – EPS – is not part of the fiscal accounts.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Heading 2000: The data include social security contributions paid by the governments for their employees as well as the contributions for special regimes (teachers and magistrates). In ECLAC data, social security contributions also include INA (National Institute of Apprenticeship), IMAS (Joint Social Aid Institute) and FODESAF (Social Development and Family Allowances Fund).

Heading 3000: In Costa Rica and for ECLAC, social security contributions from decentralised institutions are classified under heading 2000.

Heading 5212: In ECLAC data, tax on ownership of vehicles, aircraft and boats is classified in category 4000.

Heading 6200: The figures include the tax revenue of decentralised bodies (other than social security contributions). The tax revenue of decentralised bodies is classified under central government. In Costa Rica this revenue is classified under a separate unit (decentralised) considered to be separate from the central government.

In ECLAC data, the tax on the transfer of used vehicles Law No. 7088 of 30/11/87 is classified as a property tax.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures for the sub-categories under the heading 5120 are not available.

Central and local government tax revenues are only available between 2002 and 2012.

Figures in 2021 and thereafter are not comparable to data in previous years due to large adjustments as a result of Cuba's currency reform.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures exclude local government tax revenues as the data are not available.

Fines have been identified and excluded from taxes on income and taxes on property since 1995 and from taxes on goods and services since 1990.

Heading 2000: The data exclude social security contributions to general government managed by the private sector. An additional breakdown has been available between 2006 and 2017 to distinguish between social security contributions paid by employees and those paid by employers.

Heading 3000: This heading includes the mandatory non-pensions contributions to the Instituto de Formación Técnico Profesional (INFOTEP). The tax revenue is classified under the central government. In Dominican Republic this revenue is classified under a separate unit (decentralised) considered to be different to the central government.

Heading 5211: In ECLAC data, the vehicle transfer tax is classified as a property tax (4000).

Source: Ministerio de Hacienda (Ministry of Finance); Instituto Nacional de Formación Técnico Profesional (National Institute for Technical and Vocational Training).

Note: Year ending 31st December.

The data are on a cash basis, except for the data from the Central Bank of Ecuador which are on an accrual basis.

Central government tax revenues mainly come from the Internal Revenue Service while some are from the Central Bank of Ecuador (see details below).

Local tax revenues come from the Development Bank of Ecuador. Central government tax revenue data are preliminary for 2019-22. Local government tax revenues are estimated for 2021 and 2022.

Heading 2000: The data are collected from non-financial public sector operations published by the Central Bank of Ecuador.

Heading 4510: Temporary revenues from regularisation of assets abroad and post-COVID contributions have been added in this edition.

Heading 5123: The data are collected from the general budget of the consolidated state government published by the Central Bank of Ecuador.

Heading 5126: This heading includes the tax on credit operations from the general budget of the consolidated state government published by the Central Bank of Ecuador.

Heading 5127: This heading includes the tax on purchase of foreign currency from the general budget of the consolidated state government published by the Central Bank of Ecuador.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Central government tax revenue data are preliminary for 2022.

Heading 1000: Disaggregated individual and corporate income taxes are not available before 2002.

Heading 2000: The figures include social security contributions paid to the Salvadoran Institute of Social Security (ISSS), National Public Employees Pension Institute (INPEP), Social Security Institute of the Armed Forces (IPSA) and Salvadoran Institute of Teacher Welfare (ISBM). The figures exclude payments to privately managed pension funds (AFPs) and may include a small amount of voluntary contributions which is undistinguishable from the public social security contribution data.

Heading 3000: Vocational training contributions to the Instituto Salvadoreño de Formación Profesional (INSAFORP) are included in heading 3000. The tax revenue is classified under the central government. In El Salvador this revenue is classified under a separate unit considered to be different to the central government.

Note: Year ending 31st December.

The data are on a cash basis.

Local government tax revenues include revenues from the municipal property tax (IUSI).

Heading 1000: Personal and corporate income taxes also include taxes on income from financial products.

Heading 2000: Figures include contributions to the Guatemalan Social Security Institute (IGSS) and payments by public employees to the government's pension fund.

Heading 3000: Contributions to INTECAP and contributions to IRTRA are included in heading 3000. The tax revenues are classified under the central government. In Guatemala these revenues are classified under a separate unit considered to be different to the central government.

Heading 4400: Before 2000, tax on property transfer under heading 4400 also includes central government property tax under heading 4120 as they cannot be distinguished.

Heading 5121: Other beverages contain all alcoholic and non-alcoholic beverages before 2000.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Figures for local tax revenues may include non-tax revenues and central government transfers which are not considered as tax revenues according to the OECD classification, described in the Interpretative Guide, but it has not been possible to distinguish the different components within the aggregate data.

Heading 3000: The employer contributions to the National Institute of Vocational Training (INFOP) are included in heading 3000. The tax revenue is classified under the central government. In Honduras this revenue is classified under a separate unit considered to be different to the central government. .. Not available

Note: Year ending 31st December, except for 1990-2003 which refer to fiscal year ending 31st March due to data availability.

The data are on a cash basis.

Heading 2000: The figures include contributions to National Insurance Scheme (NIS).

Heading 3000: Education tax in Jamaica includes contributions from employees, employers and the self-employed calculated based on their emoluments.

The employer contributions account for the majority of the total contributions.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Tax revenue data are exclusive of fiscal documents ("documentos fiscales") which are considered as wastable tax credits according to the OECD classification described in the Interpretative Guide. Central government tax revenue data for 2022 are preliminary. Local government tax revenue and social security contributions data for 2022 are estimated.

Heading 2000: Social security contributions include regular and special contributions and professional risks premium collected by the Caja de Seguro Social (CSS).

Heading 3000: In ECLAC data, education insurance is classified as "Other taxes" (6000).

Heading 5126: In CIAT and ECLAC data, tax on banks, financial institutions and exchange houses is classified as a property tax (4000).

Heading 6200: Stamp duties before 2000 include tax on telephone calls and cables which cannot be distinguished due to data availability.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures for years before 2006 exclude local government tax revenues as the data are not available. This affects data in categories 4000, 5000 and 6000.

Heading 2000: Social security contributions before 1999 do not include social security contributions collected by decentralised institutions as the data are not available. Contributions to the health system in 2021 and 2022 have been added in this edition.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

The figures for years up to 2000 exclude local government tax revenues as the data are not available.

Heading 1210: Revenues from Régimen MYPE Tributario (RMT) have been included under heading 1210 in this edition. RMT is a regime introduced in 2017, specifically created for micro and small businesses with the aim of promoting their growth.

Heading 2000: All contributions pertaining to pensions are only made by employees and contributions to healthcare are made by employers. The exceptions are special regimes which apply to self-employed and are levied on an income basis.

Heading 3000: Contributions to SENATI are included in heading 3000. The tax revenue is classified under the central government. In Peru this revenue is classified under a separate unit considered to be different to the central government.

Heading 5123: Import tax refunds are classified under 6200 because they cannot be distinguished from other tax refunds.

.. Not available

Note: Year ending 31st March. For example, the data for 2022 represent April 2022 to March 2023.

The data are on a cash basis.

The figures do not include local tax revenues because data are not available. Central government tax revenue data are government revised estimates for 2021 and budget estimates for 2022.

Heading 2000: Social security contributions follow financial year from July to June, instead of April to March. For example, social security contributions in 2022 are between 1st July 2021 and 30th June 2022. Data is estimated for 2021 and 2022.

Heading 5123: Data for security charge are estimated for 2020-22.

Heading 5213: Data from 2020 include some of the licences and fees under taxes on use of goods and permissions in Estimates of Revenue and Expenditure 2022-2023 from the Department of Finance.

.. Not available

Note: Fiscal year ending on 30th September. For example, the data for 2022 represent October 2021 to September 2022.

The data are on a cash basis.

The figures exclude local government tax revenues as the data are not available.

Heading 1100: Income taxes on individuals include "Individuals (Ch. 75:01)" and lottery winnings tax.

Heading 2000: Social security contributions follow financial year from July to June, instead of October to September. For example, social security contributions in 2022 are between 1st July 2021 and 30th June 2022. The figures include total contribution income of National Insurance Board minus refunds. A small amount of voluntary contributions have been identified and removed from the figures since 2013.

Heading 5126: Other taxes on goods and services under heading 5126 include mainly club gaming tax which is charged on all gambling tables and other gambling devices from a licenced gambling operator.

.. Not available

Note: Year ending 31st December.

The data are on a cash basis.

Tax data are not available from 2018.

The figures exclude state and local government tax revenues as the data are not available.

The figures between 2015 and 2017 should be interpreted with caution as they have been affected by the high rate of inflation over this period.

Total tax revenue data were not available since 2014 due to missing data for social security contributions since 2014 and oil revenues since 2016 (classified in heading 1210 taxes on corporate profits).

Source: Servicio Nacional Integrado de Administración Aduanera (National Integrated Service of Customs); Ministerio de Finanzas (Ministry of Finance).

6 Country tables, tax revenues by sub-sectors of general government, 1990-2022

Revenues of Latin American, Caribbean and OECD countries have been attributed to the different levels of government according to the revised guidelines set out in the final version of the 2008 System of National Accounts (SNA). Under this, revenues are generally attributed to the level of government that exercises the authority to impose the tax or has the final discretion to set and vary the tax rate.

In all of the following tables a (“..”) indicates not available. The main series in this volume cover the years 1990 to 2022.

Figures referring to 1991-99, 2001-04, 2006-09, 2011-14 and 2016-21 in Tables 6.1 to 6.27 have been omitted because of lack of space. Complete series are, however, available on line at <http://dx.doi.org/10.1787/data-00641-en>.

.. Not available

1. The figures exclude local government tax revenues for the period 1990-1993 as the data are not available.

2. The data for social security contributions include contributions to Bolivia's pension system (since its nationalisation in 2010) and healthcare related funds.

1. The data correspond to the reported consolidated revenues of the territorial entities (departments and municipalities).

2. All of the health contributions pertaining to FOSYGA (Solidarity and Guarantee Fund) are classified as social security contributions from 2013. Prior to 2013, only the portion of the contributions used to finance the subsidised regime was included and the part to finance the contributory regime was classified in the social security sector as "other incomes".

1. The data include social security contributions paid by the governments for their employees as well as the contributions for special regimes (teachers and magistrates). In ECLAC data, social security contributions also include INA (National Institute of Apprenticeship), IMAS (Joint Social Aid Institute) and FODESAF (Social Development and Family Allowances Fund).

2. In ECLAC data, the tax on ownership of vehicles, aircraft and boats is classified in category 4000.

3. The tax revenue of decentralised bodies is classified under the central government. In Costa Rica this revenue is classified under a separate unit (decentralised) considered to be different to the central government.

- Vocational training contributions to the Instituto Salvadoreño de Formación Profesional (INSAFORP) are included in heading 3000. The tax revenue is classified under the central government. In El Salvador this revenue is classified under a separate unit considered to be different to the central government.
- Social security contributions are those paid to the Salvadoran Institute of Social Security (ISSS), National Public Employees Pension Institute (INPEP), Social Security Institute of the Armed Forces (IPSFA) and Salvadoran Institute of Teacher Welfare (ISBM). The figures exclude contributions to the privately managed regime and may include a small amount of voluntary contributions which is indistinguishable from the public social security contribution data.

5300 Unallocable between 5100 and 5200
6000 Other taxes	0	0	0
6100 Paid solely by business
6200 Other
Total tax revenue	202	5 905	96 896

.. Not available

1. Data for revenues from taxes on oil profits (classified under heading 1200) are not available from 2016.

2. Tax data are not available from 2018. The figures between 2015 and 2017 should be interpreted with caution as they have been affected by the high rate of inflation over this period.

3. Data on social security contributions are not available from 2014.

A.1 The OECD Classification of Taxes

1. 1000. Taxes on income, profits and capital gains

1100. Taxes on income, profits and capital gains of individuals

1110. On income and profits

1120. On capital gains

1200. Corporate taxes on income, profits and capital gains

1210. On income and profits

1220. On capital gains

1300. Unallocable as between 1100 and 1200

2. 2000. Social security contributions

2100. Employees

2110. On a payroll basis

2120. On an income tax basis

2200. Employers

2210. On a payroll basis

2220. On an income tax basis

2300. Self-employed or non-employed

2310. On a payroll basis

2320. On an income tax basis

2400 Unallocable as between 2100, 2200 and 2300

2410. On a payroll basis

2420. On an income tax basis

3. 3000. Taxes on payroll and workforce

4. 4000. Taxes on property

4100. Recurrent taxes on immovable property

4110. Households

4120. Other

4200. Recurrent taxes on net wealth

4210. Individual

4220. Corporate

4300. Estate, inheritance and gift taxes

4310. Estate and inheritance taxes

4320. Gift taxes

4400. Taxes on financial and capital transactions

4500. Other non-recurrent taxes on property

4510. On net wealth

4520. Other non-recurrent taxes

4600. Other recurrent taxes on property

5. 5000. Taxes on goods and services

5100. Taxes on production, sale, transfer, leasing and delivery of goods and rendering of services

5110. General taxes

5111. Value added taxes

5112. Sales taxes

5113. Turnover and other general taxes on goods and services

5120. Taxes on specific goods and services

5121. Excises

5122. Profits of fiscal monopolies

5123. Customs and import duties

5124. Taxes on exports

5125. Taxes on investment goods

5126 . Taxes on specific services

5127. Other taxes on international trade and transactions

5128. Other taxes on specific goods and services

5130. Unallocable as between 5110 and 5120

5200. Taxes on use of goods, or on permission to use goods or perform activities

5210. Recurrent taxes

5211. Paid by households in respect of motor vehicles

5212. Paid by others in respect of motor vehicles

5213. Other recurrent taxes

5220. Non-recurrent taxes

5300. Unallocable as between 5100 and 5200

6. 6000. Other taxes

6100. Paid solely by business

6200. Paid by other than business or unidentifiable

A.2 Coverage

General criteria

1. In the OECD classification, the term “taxes” is confined to compulsory unrequited payments to the general government or to a supranational authority. Taxes are unrequited in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments.
2. The term “tax” does not include fines, penalties and compulsory loans paid to government. Borderline cases between tax and non-tax revenues in relation to certain fees and charges are discussed in §12–15.
3. General government consists of the central administration, agencies whose operations are under its effective control, state and local governments and their administrations, certain social security schemes and autonomous governmental entities, excluding public enterprises. This definition of government follows that of the 2008 *System of National Accounts* (SNA).² In that publication, the general government sector and its sub-sectors are defined in Chapter 4, paragraphs 4.117 to 4.165.
4. Extra-budgetary units are part of the general government system. These are general government entities with individual budgets that are not fully covered by the main or general budget. These entities operate under the authority or control of a central, state, or local government. Extra-budgetary entities may have their own revenue sources, which may be supplemented by grants (transfers) from the general budget or from other sources. Even though their budgets may be subject to approval by the legislature, similar to that of budgetary accounts, they have discretion over the volume and composition of their spending. Such entities may be established to carry out specific government functions, such as road construction, or the nonmarket production of health or education services. Budgetary arrangements vary widely across countries, and various terms are used to describe these entities, but they are often referred to as “extra-budgetary funds” or “decentralised agencies.”
5. Compulsory, unrequited payments collected by national governments and paid to supranational authorities are also included as taxes under the definition in paragraph 1. Taxes that are collected by national governments and paid to a supranational authority are included as tax revenues at the level of the supranational authority in the SNA2008 (paragraphs 22.60-61, 22.88 and 22.99 refer) and the ESA2010 (paragraph 20.165 refers). In Revenue Statistics, these taxes include customs duties, contributions to the EU Single Resolution Fund, and any other taxes collected by EU member states on behalf of the European Union. They are included in the tax revenue amounts in the country tables (Chapter 5) of the country in which they are collected and are attributed to the supranational level of government (see §102).
6. In countries where the church forms part of general government, church taxes are included, provided they meet the criteria set out in §1 above. As the data refer to receipts of general government and to supranational authorities, levies paid to non-government bodies, welfare agencies or social insurance schemes outside general government, trade unions or trade associations, even where such levies are compulsory, are excluded. Compulsory payments to general government earmarked for such bodies are, however, included, provided that the government is not simply acting in an agency capacity.³ Profits from fiscal monopolies are distinguished from those of other public enterprises and are treated as taxes because they reflect the exercise of the taxing power of the state by the use of monopoly powers (see §66–68), as are profits received by the government from the purchase and sale of foreign exchange at different rates (see §76).
7. Taxes paid by governments (e.g., social security contributions and payroll taxes paid by governments in their capacity as an employer, consumption taxes on their purchases or taxes on their property) are not excluded from the data provided. However, where it is possible to identify the amounts of revenue involved,⁴ they are shown in Table 5.40 of this Report.

8. The relationship between this classification and that of the System of National Accounts (SNA) is set out in Sections A.9 and A.11 below. Because of the differences between the two classifications, the data shown in national accounts are sometimes calculated or classified differently from the practice set out in this guide. These and other differences are mentioned where appropriate (e.g., in §31 below) but it is not possible to refer to all of them. There may also be some differences between this classification and that employed domestically by certain national administrations (e.g., see §13 below), so that OECD and national statistics data may not always be consistent: any such differences, however, are likely to be very slight in terms of amounts of revenues involved.

Social security contributions

9. Compulsory social security contributions, as defined in §40, and paid to general government, are treated here as tax revenues. They may, however, differ from other taxes in that the receipt of social security benefits depends, in most countries, upon appropriate contributions having been made, although the size of the benefits is not necessarily related to the amount of the contributions. Better comparability between countries is obtained by treating social security contributions as taxes, but they are listed under a separate heading so that they can be distinguished in any analysis.

10. The strict dividing line between tax revenues (compulsory unrequited payments to general government or a supranational authority) and non-tax compulsory payments (NTCPs) (payments that are either required or made to other institutions) is clearly defined. However, within the range of different compulsory payments to governments existing across countries, it is not always straightforward in practice to decide whether specific payments are either taxes or NTCPs. For example, compulsory pension savings that are controlled by general government and that accumulate on an individual account earning a market return or a rate that compensates for inflation would at first sight be categorised as NTCPs as opposed to taxes. However, even these payments might still be ‘unrequited’ and therefore classify as taxes instead of NTCPs (for example if these pension savings are not paid out when the taxpayer dies before reaching the pension age and the funds are then used to provide a minimum pension to all taxpayers that are insured). These issues result in the social security revenue figures reported for most countries being based on the premise that all types of compulsory payments to general government are judged to some extent to have a re-distributional element. It should be noted that this conclusion is based on a typically broad interpretation of the term ‘unrequited’ in the tax definition.

11. Social security contributions which are either voluntary or not payable to general government (see §1) are not treated as taxes, though in some countries, as indicated in the country footnotes, there are difficulties in completely eliminating voluntary contributions and certain compulsory payments to the private sector from the revenue figures. Imputed social security contributions are also not treated as taxes.

Fees, user charges and licence fees

12. Apart from vehicle licence fees, which are universally regarded as taxes, it is not easy to distinguish between those fees and user charges which are to be treated as taxes and those which are not, since, whilst a fee or charge is levied in connection with a specific service or activity, the strength of the link between the fee and the service provided may vary considerably, as may the relation between the amount of the fee and the cost of providing the service. Where the recipient of a service pays a fee clearly related to the cost of providing the service, the levy may be regarded as required and under the definition of §1 would not be considered as a tax. In the following cases, however, a levy could be considered as ‘unrequited’:

- a) where the charge greatly exceeds the cost of providing the service;
- b) where the payer of the levy is not the receiver of the benefit (e.g., a fee collected from slaughterhouses to finance a service which is provided to farmers);

- c) where government is not providing a specific service in return for the levy which it receives even though a licence may be issued to the payer (e.g., where the government grants a hunting, fishing or shooting licence which is not accompanied by the right to use a specific area of government land);
- d) where benefits are received only by those paying the levy but the benefits received by each individual are not necessarily in proportion to his payments (e.g., a milk marketing levy paid by dairy farmers and used to promote the consumption of milk).
- e) where the payer of the levy cannot opt out from making payments (e.g. public broadcast fees where the payer is obliged to pay the levy although not consuming public broadcast service).

13. In marginal cases, however, the application of the criteria set out in §1 can be particularly difficult. The solution adopted — given the desirability of international uniformity and the relatively small amounts of revenue usually involved — is to follow the predominant practice among tax administrations rather than to allow each country to adopt its own view as to whether such levies are regarded as taxes or as non-tax revenue.⁵

14. A list of the main fees and charges in question and their normal⁶ treatment in this publication is as follows:

Non-tax revenues:	court fees; driving licence fees; harbour fees; passport fees
Taxes within heading 5200	permission to perform such activities as distributing films; hunting, fishing and shooting; providing entertainment or gambling facilities; selling alcohol or tobacco; permission to own dogs or to use or own motor vehicles or guns; severance taxes

15. In practice, it may not always be possible to isolate tax receipts from non-tax revenue receipts when they are recorded together. If it is estimated that the bulk of the receipts derive from non-tax revenues, the whole amount involved is treated as a non-tax revenue; otherwise, such government receipts are included and classified according to the rules provided in §33 below.

Royalties

16. The ownership of subsoil assets in the form of deposits of minerals or fossil fuels (coal, oil, or natural gas) depends upon the way in which property rights are defined by law and also on international agreements in the case of deposits below international waters. In some cases, either the ground below which the mineral deposits are located, the deposits themselves or both may belong to a local or central government unit.

17. In such cases, these general government units may grant leases to other institutional units that permit them to extract these deposits over a specified period of time in return for a payment or series of payments. These payments are often described as 'royalties' but they are essentially rent that accrues to owners of natural resources in return for putting these assets at the disposal of other units for specified periods of time. The rent may take the form of periodic payments of fixed amounts, irrespective of the rate of extraction, or, more commonly, they may be a function of the quantity, volume, or value of the asset extracted. Enterprises engaged in exploration on government land may make payments to general government units in exchange for the right to undertake test drilling or otherwise investigate the existence and location of subsoil assets. Such payments are also recorded as rents even though no extraction may take place. These payments are therefore classified as non-tax revenues.

18. The same principles apply when other institutional units are granted leases that permit them to fell timber in natural forests on land owned by general government units. These payments are also classified as non-tax revenues.

19. These rents or royalties paid to general government should not be confused with taxes on income and profits, severance taxes, business licenses, or other taxes. If the payments are levied on the profits

from the extraction activity, then they should be classified as taxes on incomes, profits and gains (1000). In addition, any severance payments that are imposed on the extraction of minerals and fossil fuels from reserves owned privately or by another government should be classified as taxes. Payments related to the gross value of production should be classified as other taxes on goods and services (5128). Payments for a license or permit to conduct extraction operations should be classified as taxes on use of goods and on permission to use goods or perform activities (5213).

Fines and penalties

20. In principle, fines and penalties charged on overdue taxes or penalties imposed for the attempted evasion of taxes should not be recorded as tax revenues. However, it may not be possible to separate payments of fines or other penalties from the revenues from the taxes to which they relate. In this case, the fines and penalties relating to a particular tax are recorded together with the revenues from that tax and fines and penalties paid with revenue from unidentifiable taxes are classified as other taxes in Category 6000. Fines not relating to tax offences (e.g., for parking offences), or not identifiable as relating to tax offences, are also not treated as tax revenues.

A.3 Basis of reporting

Accrual or cash reporting

21. The data reported in the *Revenue Statistics* publications for recent years are predominantly recorded on an accrual basis for OECD countries, i.e. recorded at the time that the tax liability was created. Further information is provided in the footnotes to the country table in Chapter 5 of the Report.

22. However, data for earlier years and for non-OECD countries are still predominantly recorded on a cash basis, i.e. at the time at which the payment was received by government. Thus, for example, taxes withheld by employers in one year but paid to the government in the following year and taxes due in one year but actually paid in the following year are both included in the receipts of the second year. Corrective transactions, such as refunds, repayments and drawbacks, are deducted from gross revenues of the period in which they are made.

23. Data on tax revenues are recorded without offsets for the administrative expenses connected with tax collection. Similarly, where the proceeds of tax are used to subsidise particular members of the community, the subsidy is not deducted from the yield of the tax, though the tax may be shown net of subsidies in the national records of some countries.

24. As regards fiscal monopolies (heading 5122), only the amount actually transferred to the government is included in government revenues. However, if any expenditures of fiscal monopolies are considered to be government expenditures (e.g., social expenditures undertaken by fiscal monopolies at the direction of the government) they are added back for the purpose of arriving at tax revenue figures (see §66 below).

The distinction between tax and expenditure provisions⁷

25. Because this publication is concerned only with the revenue side of government operations, no account being taken of the expenditure side, a distinction has to be made between tax and expenditure provisions. Normally there is no difficulty in making this distinction as expenditures are made outside the tax system and the tax accounts and under legislation separate from the tax legislation. In borderline cases, cash flow is used to distinguish between tax provisions and expenditure provisions. Insofar as a provision affects the flow of tax payments from the taxpayer to the government, it is regarded as a tax provision and

is taken into account in the data shown in this publication. A provision which does not affect this flow is seen as an expenditure provision and is disregarded in the data recorded in this publication.

26. Tax allowances, exemptions and deductions against the tax base clearly affect the amount of tax paid to the government and are therefore considered as tax provisions. At the other extreme, those subsidies which cannot be offset against tax liability and which are clearly not connected with the assessment process, do not reduce tax revenues as recorded in this publication. Tax credits are amounts deductible from tax payable (as distinct from deductions from the tax base). Two types of tax credits are distinguished, those (referred to here as wastable tax credits) which are limited to the amount of the tax liability and therefore cannot give rise to a payment by the authorities to the taxpayer, and those (referred to as non-wastable tax credits) which are not so limited, so that the excess of the credit over the tax liability can be paid to the taxpayer.⁸ A wastable tax credit, like a tax allowance, clearly affects the amount of tax paid to the government, and is therefore considered as a tax provision. The practice followed for non-wastable tax credits⁹ is to distinguish between the 'tax expenditure component',¹⁰ which is that portion of the credit that is used to reduce or eliminate a taxpayer's liability, and the 'transfer component', which is the portion that exceeds the taxpayer's liability and is paid to that taxpayer. Reported tax revenues should be reduced by the amount of the tax expenditure component but not by the amount of the transfer component. In addition, the amounts of the tax expenditure and transfer components should be reported as memorandum items in the country tables. Countries that are unable to distinguish between the tax expenditure and transfer components should indicate whether or not the tax revenues have been reduced by the total of these components, and provide any available estimates of the amounts of the two components. Further information is given in Chapter 1 of the Report, which illustrates the effect of alternative treatments of non-wastable tax credits on tax to GDP.

Calendar and fiscal years

27. National authorities whose fiscal years do not correspond to the calendar year show data, where possible, on a calendar year basis to permit maximum comparability with the data of other countries. There remain a few countries where data refer to fiscal years. For these the GDP data used in the comparative tables also correspond to the fiscal years.

A.4 General classification criteria

The main classification criteria

28. The classification of receipts among the main headings (1000, 2000, 3000, 4000, 5000 and 6000) is generally governed by the base on which the tax is levied: 1000 income, profits and capital gains; 2000 and 3000 earnings, payroll or number of employees; 4000 property; 5000 goods and services; 6000 multiple bases, other bases or unidentifiable bases. Where a tax is calculated on more than one base, the receipts are, where possible, split among the various headings (see §33 and §84). The headings 4000 and 5000 cover not only taxes where the tax base is the property, goods or services themselves but also certain related taxes. Thus, taxes on the transfer of property are included in 4400¹¹ and taxes on the use of goods or on permission to perform activities in 5200. In headings 4000 and 5000 a distinction is made in certain sub-headings between recurrent and non-recurrent taxes: recurrent taxes are defined as those levied at regular intervals (usually annually) and non-recurrent taxes are levied once and for all (see also §48 to §51, §54, §55 and §81 for particular applications of this distinction).

29. Earmarking of a tax for specific purposes does not affect the classification of tax receipts. However, as explained in §40 on the classification of social security contributions, the conferment of an entitlement to social benefits is crucial to the definition of the 2000 main heading.

30. The way that a tax is levied or collected (e.g., by use of stamps) does not affect classification.

Classification of taxpayers

31. In certain sub-headings, distinctions are made between different categories of taxpayers. These distinctions vary from tax to tax:

a) Between individuals and corporations in relation to income and net wealth taxes

The basic distinction is that corporation income taxes, as distinct from individual income taxes, are levied on the corporation as an entity, not on the individuals who own it, and without regard to the personal circumstances of these individuals. The same distinction applies to net wealth taxes on corporations and those on individuals. Taxes paid on the profits of partnerships and the income of institutions, such as life insurance or pension funds, are classified according to the same rule. They are classified as corporate taxes (1200) if they are charged on the partnership or institution as an entity without regard to the personal circumstances of the owners. Otherwise, they are treated as individual taxes (1100). Usually, there is different legislation for the corporation taxes and for the individual taxes.¹² The distinction made here between individuals and corporations does not follow the sector classification between households, enterprises, and so on of the System of National Accounts for income and outlay accounts. The SNA classification requires certain unincorporated businesses¹³ to be excluded from the household sector and included with non-financial enterprises and financial institutions. The tax on the profits of these businesses, however, cannot always be separated from the tax on the other income of their owners, or can be separated only on an arbitrary basis. No attempt at this separation is made here and the whole of the individual income tax is shown together without regard to the nature of the income chargeable.

b) Between households and others in relation to taxes on immovable property

Here the distinction is that adopted by the SNA for the production and consumption expenditure accounts. The distinction is between households as consumers (i.e. excluding non-incorporated business) on the one hand and producers on the other hand. However, taxes on dwellings occupied by households, whether paid by owner-occupiers, tenants or landlords, are classified under households. This follows the common distinction made between taxes on domestic property versus taxes on business property. Some countries are not, however, in a position to make this distinction.

c) Between households and others in relation to motor vehicle licences

Here the distinction is between households as consumers on the one hand and producers on the other, as in the production and consumption expenditure accounts of the SNA.

d) Between business and others in relation to the residual taxes (6000)

The distinction is the same as in c) above between producers on the one hand and households as consumers on the other hand. Taxes which are included under the heading 6000 because they involve more than one tax base or because the tax base does not fall within any of the previous categories but which are identifiable as levyable only on producers and not on households are included under 'business'. The rest of the taxes which are included under the heading 6000 are shown as 'other' or non-identified.

Surcharges

32. Receipts from surcharges in respect of particular taxes are usually classified with the receipts from the relevant tax whether or not the surcharge is temporary. If, however, the surcharge has a characteristic which would render it classifiable in a different heading of the OECD list, receipts from the surcharge are classified under that heading separately from the relevant tax.

Unidentifiable tax receipts and residual sub-headings

33. A number of cases arise where taxes cannot be identified as belonging entirely to a heading or sub-heading of the OECD classification and the following practices are applied in such cases:

- a) The heading is known, but it is not known how receipts should be allocated between sub-headings: receipts are classified in the appropriate residual sub-heading (1300, 2400, 4520, 4600, 5128, 5130, 5300 or 6200).
- b) It is known that the bulk of receipts from a group of taxes (usually local taxes) is derived from taxes within a particular heading or sub-heading, but some of the taxes in the group whose amount cannot be precisely ascertained may be classifiable in other headings or sub-headings: receipts are shown in the heading or sub-heading under which most of the receipts fall.
- c) Neither the heading nor sub-heading of a tax (usually local) can be identified: the tax is classified in 6200 unless it is known that it is a tax on business in which case it is classified in 6100.

A.5 Commentaries on items of the list

1000 — Taxes on income, profits and capital gains

34. This heading covers taxes levied on the net income or profits (i.e. gross income minus allowable tax reliefs) of individuals and enterprises. Also covered are taxes levied on the capital gains of individuals and enterprises, and gains from gambling.

35. Included in the heading are:

- a) taxes levied predominantly on income or profits, though partially on other bases. Taxes on various bases which are not predominantly income or profits are classified according to the principles laid down in §33 and §84;
- b) taxes on property, which are levied on a presumed or estimated income as part of an income tax (see also §48(a), (c) and (d));
- c) compulsory payments to social security fund contributions that are levied on income but do not confer an entitlement to social benefits. When such contributions do confer an entitlement to social benefits, they are included in heading 2000 (see §40);
- d) receipts from integrated scheduler income tax systems are classified as a whole in this heading, even though certain of the scheduler taxes may be based upon gross income and may not take into account the personal circumstances of the taxpayer.

36. The main subdivision of this heading is between levies on individuals (1100) and those on corporate enterprises (1200). Under each subdivision a distinction is made between taxes on income and profits (1110 and 1210), and taxes on capital gains (1120 and 1220). If certain receipts cannot be identified as appropriate to either 1100 or 1200, or if in practice this distinction cannot be made (e.g., because there are no reliable data on the recipients of payments from which withholding taxes are deducted) they are classified in 1300 as not-allocable.

Treatment of credits under imputation systems

37. Under imputation systems of corporate income tax, a company's shareholders are wholly or partly relieved of their liability to income tax on dividends paid by the company out of income or profits liable to corporate income tax. In countries with such systems,¹⁴ part of the tax on the company's profits is available

to provide relief against the shareholders' own tax liability. The relief to the shareholder takes the form of a tax credit, the amount of which may be less than, equal to, or more than the shareholder's overall tax liability. If the tax credit exceeds this tax liability the excess may be payable to the shareholder. As this type of tax credit is an integral part of the imputation system of corporate income tax, any payment to the shareholders is treated as a repayment of tax and not as expenditure (compare the treatment of other tax credits described in §26).

38. As the tax credit under imputation systems (even when exceeding tax liability) is to be regarded as a tax provision, the question arises whether it should be deducted from individual income tax receipts (1110) or corporate income tax receipts (1210). In this Report, the full amount of corporate income tax paid is shown under 1210 and no imputed tax is included under 1110. Thus, the full amount of the credit reduces the amount of 1110 whether the credit results in a reduction of personal income tax liability or whether an actual refund is made because the credit exceeds the income tax liability. (Where, however, such tax credits are deducted from corporation tax in respect of dividends paid to corporations the amounts are deducted from the receipts of 1210).

1120 and 1220 — Taxes on capital gains

39. These sub-headings comprise taxes imposed on capital gains, 1120 covering those levied on the gains of individuals and 1220 those levied on the gains of corporate enterprises, where receipts from such taxes can be separately identified. In many countries, this is not the case and the receipts from such taxes are then classified with those from the income tax. Heading 1120 also includes taxes on gains from gambling.

2000 — Social security contributions

40. Classified here are all compulsory payments to general government that confer an entitlement to receive a (contingent) future social benefit. Such payments are usually earmarked to finance social benefits and are often paid to institutions of general government that provide such benefits. However, such earmarking is not part of the definition of social security contributions and is not required for a tax to be classified here. However, conferment of an entitlement is required for a tax to be classified under this heading. So, levies on income or payroll that are earmarked for social security funds but do not confer an entitlement to benefit are excluded from this heading and shown under personal income taxes (1100) or taxes on payroll and workforce (3000). Taxes on other bases, such as goods and services, which are earmarked for social security benefits are not shown here but are classified according to their respective bases because they generally confer no entitlement to social security benefits.

41. Contributions for the following types of social security benefits would, *inter alia*, be included: unemployment insurance benefits and supplements, accident, injury and sickness benefits, old-age, disability and survivors' pensions, family allowances, reimbursements for medical and hospital expenses or provision of hospital or medical services. Contributions may be levied on both employees and employers.

42. Contributions may be based on earnings or payroll ('on a payroll basis') or on net income after deductions and exemptions for personal circumstances ('on an income tax basis'), and the revenues from the two bases should be separately identified if possible. However, where contributions to a general social security scheme are on a payroll basis, but the contributions of particular groups (such as the self-employed) cannot be assessed on this basis and net income is used as a proxy for gross earnings, the receipts may still be classified as being on a payroll basis. In principle, this heading excludes voluntary contributions paid to social security schemes. When separately identifiable these are shown in the memorandum item on the financing of social security benefits. In practice, however, they cannot always be separately identified from compulsory contributions, in which case they are included in this heading.

43. Contributions to social insurance schemes which are not institutions of general government and to other types of insurance schemes, provident funds, pension funds, friendly societies or other saving schemes are not considered as social security contributions. Provident funds are arrangements under which the contributions of each employee and of the corresponding employer on his/her behalf are kept in a separate account earning interest and withdrawable under specific circumstances. Pension funds are separately organised schemes negotiated between employees and employers and carry provisions for different contributions and benefits, sometimes more directly tied to salary levels and length of service than under social security schemes. When contributions to these schemes are compulsory or quasi-compulsory (e.g., by virtue of agreement with professional and union organisations) they are shown in the memorandum item (refer to Table 5.39 of the Report).

44. Contributions by government employees and by governments in respect of their employees, to social security schemes classified within general government are included in this heading. Contributions to separate schemes for government employees, which can be regarded as replacing general social security schemes, are also regarded as taxes.¹⁵ Where, however, a separate scheme is not seen as replacing a general scheme and has been negotiated between the government, in its role as an employer, and its employees, it is not regarded as social security and contributions to it are not regarded as taxes, even though the scheme may have been established by legislation.

45. This heading excludes 'imputed' contributions, which correspond to social benefits paid directly by employers to their employees or former employees or to their representatives (e.g., when employers are legally obliged to pay sickness benefits for a certain period).

46. Contributions are divided into those of employees (2100), employers (2200), and self-employed or non-employed (2300), and then further sub-divided according to the basis on which they are levied. Employees are defined for this purpose as all persons engaged in activities of business units, government bodies, private non-profit institutions, or other paid employment, except the proprietors and their unpaid family members in the case of unincorporated businesses. Members of the armed forces are included, irrespective of the duration and type of their service, if they contribute to social security schemes. The contributions of employers are defined as their payments on account of their employees to social security schemes. Where employees or employers are required to continue the payment of social security contributions when the employee becomes unemployed these contributions, data permitting, are shown in 2100 and 2200 respectively. Accordingly, the sub-heading 2300 is confined to contributions paid by the self-employed and by those outside of the labour force (e.g., disabled or retired individuals).

3000 — Taxes on payroll and workforce

47. These consist of taxes payable by enterprises assessed either as a proportion of the wages or salaries paid or as a fixed amount per person employed. They do not include compulsory social security contributions paid by employers or any taxes paid by employees themselves out of their wages or salaries

4000 — Taxes on property

48. This heading covers recurrent and non-recurrent taxes on the use, ownership or transfer of property. These include taxes on immovable property or net wealth, taxes on the change of ownership of property through inheritance or gift and taxes on financial and capital transactions. The following kinds of tax are excluded from this heading:

- a) taxes on capital gains resulting from the sale of a property (1120 or 1220);
- b) taxes on the use of goods or on permission to use goods or perform activities (5200); see §78;

- c) taxes on immovable property levied on the basis of a presumed net income which take into account the personal circumstances of the taxpayer. They are classified as income taxes along with taxes on income and capital gains derived from property (1100);
- d) taxes on the use of property for residence, where the tax is payable by either proprietor or tenant and the amount payable is a function of the user's personal circumstances (pay, dependants, and so on). They are classified as taxes on income (1100);
- e) taxes on building in excess of permitted maximum density, taxes on the enlargement, construction or alteration of certain buildings beyond a permitted value and taxes on building construction. They are classified as taxes on permission to perform activities (5200);
- f) taxes on the use of one's own property for special trading purposes like selling alcohol, tobacco, meat or for exploitation of land resources (e.g., United States severance taxes). They are classified as taxes on permission to perform activities (5200).

4100 — Recurrent taxes on immovable property

49. This sub-heading covers taxes levied regularly in respect of the use or ownership of immovable property.

- these taxes are levied on land and buildings;
- they can be in the form of a percentage of an assessed property value based on a national rental income, sales price, or capitalised yield; or in terms of other characteristics of real property, (for example size or location) from which a presumed rent or capital value can be derived.
- such taxes can be levied on proprietors, tenants, or both. They can also be paid by one level of government to another level of government in respect of property under the jurisdiction of the latter.
- debts are not taken into account in the assessment of these taxes, and they differ from taxes on net wealth in this respect.

50. Taxes on immovable property are further sub-divided into those paid by households (4110) and those paid by other entities (4120), according to the criteria set out in §31(b) above.

4200 — Recurrent taxes on net wealth

51. This sub-heading covers taxes levied regularly (in most cases annually) on net wealth, i.e. taxes on a wide range of movable and immovable property, net of debt. It is sub-divided into taxes paid by individuals (4210) and taxes paid by corporate enterprises (4220) according to the criteria set out in §31(a) above. If separate figures exist for receipts paid by institutions, the tax payments involved are added to those paid by corporations.

4300 — Estate, inheritance and gift taxes

52. This sub-heading is divided into taxes on estates and inheritances (4310) and taxes on gifts (4320).¹⁶ Estate taxes are charged on the amount of the total estate whereas inheritance taxes are charged on the shares of the individual recipients; in addition the latter may take into account the relationship of the individual recipients to the deceased.

4400 — Taxes on financial and capital transactions

53. This sub-heading comprises, *inter alia*, taxes on the issue, transfer, purchase and sale of non-financial and financial assets (including foreign exchange or securities), taxes on cheques and other forms of payment, and taxes levied on specific legal transactions such as validation of contracts and the sale of immovable property. The heading does not include:

- a) taxes on the use of goods or property or permission to perform certain activities (5200);
- b) fees paid to cover court charges, charges for birth, marriage or death certificates, which are normally regarded as non-tax revenues (see §12);
- c) taxes on capital gains (1000);
- d) recurrent taxes on immovable property (4100);
- e) recurrent taxes on net wealth (4200);
- f) once-and-for-all levies on property or wealth (4500);
- g) stamp taxes not related to financial and capital transactions
 - i. Stamp taxes on the sale of specific products, such as alcoholic beverages or tobacco (5121);
 - ii. Stamp taxes restricted by law to imported products (5123) or to exported products (5124); or
 - iii. Stamp taxes not falling exclusively on a single category of transaction (6000).

4500 — Other non-recurrent taxes on property

54. This sub-heading covers once-and-for-all, as distinct from recurrent, levies on property. It is divided into taxes on net wealth (4510) and other non-recurrent taxes on property (4520). Heading 4510 would include taxes levied to meet emergency expenditures, or for redistribution purposes. Heading 4520 would cover taxes levied to take account of increases in land value due to permission given to develop or provision of additional local facilities by general government, any taxes on the revaluation of capital and once-and-for-all taxes on particular items of property.

4600 — Other recurrent taxes on property

55. These rarely exist in OECD member countries, but the heading would include taxes on goods such as cattle, jewellery, windows, and other external signs of wealth.

5000 — Taxes on goods and services

56. All taxes and duties levied on the production, extraction, sale, transfer, leasing or delivery of goods, and the rendering of services (5100), or in respect of the use of goods or permission to use goods or to perform activities (5200) are included here. The heading thus covers:

- a) multi-stage cumulative taxes;
- b) general sales taxes — whether levied at manufacture/production, wholesale or retail level;
- c) value-added taxes;
- d) excises;
- e) taxes levied on the import and export of goods;
- f) taxes levied in respect of the use of goods and taxes on permission to use goods, or perform certain activities;
- g) taxes on the extraction, processing or production of minerals and other products.

57. Borderline cases between this heading and heading 4000 (taxes on property) and 6100 (other taxes on business) are referred to in §48, §53 and §80. Residual sub-headings (5300) and (5130) cover tax receipts which cannot be allocated between 5100 and 5200 and between 5110 and 5120, respectively; see §33.

5100 — Taxes on the production, sale, transfer, leasing and delivery of goods and rendering of services

58. This sub-heading consists of all taxes, levied on transactions in goods and services on the basis of their intrinsic characteristics (e.g., value, weight of tobacco, strength of alcohol, and so on) as distinct from taxes imposed on the use of goods, or permission to use goods or perform activities, which fall under 5200.

5110 — General taxes on goods and services

59. This sub-heading includes all taxes, other than import and export duties (5123 and 5124), levied on the production, leasing, transfer, delivery or sales of a wide range of goods and/or the rendering of a wide range of services, irrespective of whether they are domestically produced or imported and irrespective of the stage of production or distribution at which they are levied. It thus covers value-added taxes, sales taxes and multi-stage cumulative taxes. Receipts from border adjustments in respect of such taxes when goods are imported are added to gross receipts for this category, and repayments of such taxes when goods are exported are deducted. These taxes are subdivided into 5111 value-added taxes, 5112 sales taxes, 5113 turnover and other general taxes on goods and services.

60. Borderline cases arise between this heading and taxes on specific goods (5120) when taxes are levied on a large number of goods, for example, the United Kingdom purchase tax (repealed in 1973) and the Japanese commodity tax (repealed in 1988). In conformity with national views, the former United Kingdom purchase tax is classified as a general tax (5112) and the former Japanese commodity tax as excises (5121).

5111 — Value-added taxes

61. All general consumption taxes charged on value-added are classified in this sub-heading, irrespective of the method of deduction and the stages at which the taxes are levied. In practice, all OECD countries with value-added taxes normally allow immediate deduction of taxes on purchases by all but the final consumer and impose tax at all stages. In some countries the heading may include certain taxes, such as those on financial and insurance activities, either because receipts from them cannot be identified separately from those from the value-added tax, or because they are regarded as an integral part of the value-added tax, even though similar taxes in other countries might be classified elsewhere (e.g., 5126 as taxes on services or 4400 as taxes on financial and capital transactions).

5112 — Sales taxes

62. All general taxes levied at one stage only, whether at manufacturing or production, wholesale or retail stage are classified here.

5113 — Turnover and other general taxes on goods and services

63. These are multi-stage cumulative taxes and taxes where elements of consumption taxes are combined with multistage taxes. These taxes are levied each time a transaction takes place without deduction for taxes paid on inputs. Multi-stage taxes can be combined with elements of value-added or sales taxes.

5120 — Taxes on specific goods and services

64. Excises, profits generated and transferred from fiscal monopolies, and customs and imports duties as well as taxes on exports, foreign exchange transactions, investment goods and betting stakes and special taxes on services, which do not form part of a general tax of 5110, are included in this category.

5121 — Excises

65. Excises are taxes levied as a product specific unit tax on a predefined limited range of goods. Excises are usually levied at differentiated rates on nonessential or luxury goods, alcoholic beverages, tobacco, and energy. Excises may be imposed at any stage of production or distribution and are usually assessed as a specific charge per unit based on characteristics by reference to the value, weight, strength, or quantity of the product. Included are special taxes on individual products such as sugar, sugar beets, matches, and chocolates; taxes levied at varying rates on a certain range of goods; and taxes levied on tobacco goods, alcoholic drinks, motor fuels, and hydrocarbon oils. If a tax collected principally on imported goods also applies, or would apply, under the same law to comparable domestically produced goods, then the revenue from this tax is classified as arising from excises rather than from import duties. This principle applies even if there is no comparable domestic production or no possibility of such production. Taxes on the use of utilities such as water, electricity, gas, and energy are regarded as excises rather than taxes on specific services (5126). Excises exclude those taxes that are levied as general taxes on goods and services (5110); profits of fiscal monopolies (5122); customs and other import duties (5123); or taxes on exports (5124).

5122 — Profits of fiscal monopolies

66. This sub-heading covers that part of the profits of fiscal monopolies which is transferred to general government or which is used to finance any expenditures considered to be government expenditures (see §24). Amounts are shown when they are transferred to general government or used to make expenditures considered to be government expenditures.

67. Fiscal monopolies reflect the exercise of the taxing power of government by the use of monopoly powers. Fiscal monopolies are non-financial public enterprises exercising a monopoly in most cases over the production or distribution of tobacco, alcoholic beverages, salt, matches, playing cards and petroleum or agricultural products (i.e. on the kind of products which are likely to be, alternatively or additionally, subject to the excises of 5121), to raise the government revenues which in other countries are gathered through taxes on dealings in such commodities by private business units. The government monopoly may be at the production stage or, as in the case of government-owned and controlled liquor stores, at the distribution stage.

68. Fiscal monopolies are distinguished from public utilities such as rail transport, electricity, post offices, and other communications, which may enjoy a monopoly or quasi-monopoly position but where the primary purpose is normally to provide basic services rather than to raise revenue for government. Transfers from such other public enterprises to the government are considered as non-tax revenues. The traditional concept of fiscal monopoly is not generally extended to include state lotteries, the profits of which are usually accordingly regarded as non-tax revenues. However, they can be included as tax revenues if the prime reason for their operation is to raise revenues to finance government expenditure. Fiscal monopoly profits are distinguished from export and import monopoly profits (5127) transferred from marketing boards or other enterprises dealing with international trade.

5123 — Customs and other import duties

69. Taxes, stamp duties and surcharges restricted by law to imported products are included here. Also included are levies on imported agricultural products which are imposed in member countries of the European Union and amounts paid by certain of these countries under the Monetary Compensation Accounts (MCA) system.¹⁷ Customs duties collected by European Union member states on behalf of the European Union are reported under this heading at the supranational level of government in the country tables (in Chapter 5 of the Report). Excluded here are taxes collected on imports as part of a general tax on goods and services, or an excise applicable to both imported and domestically produced goods.

5124 — Taxes on exports

70. In the 1970s, export duties were levied in Australia, Canada and Portugal as a regular measure and they have been used in Finland for counter-cyclical purposes. Some member countries of the European Union pay, as part of the MCA system, a levy on exports (see note 16 to §69). Where these amounts are identifiable, they are shown in this heading. This heading does not include repayments of general consumption taxes or excises or customs duties on exported goods, which should be deducted from the gross receipts under 5110, 5121 or 5123, as appropriate.

5125 — Taxes on investment goods

71. This sub-heading covers taxes on investment goods, such as machinery. These taxes may be imposed for a number of years or temporarily for counter-cyclical purposes. Taxes on industrial inputs which are also levied on consumers [e.g., the Swedish energy tax which is classified under (5121)] are not included here.

5126 — Taxes on specific services

72. All taxes assessed on the payment for specific services, such as taxes on insurance premiums, banking services, gambling and betting stakes (e.g., from horse races, football pools, lottery tickets), transport, entertainment, restaurant and advertising charges, fall into this category. Taxes on entry to casinos, races, other similar events or venues as well as stamp taxes on specific services are also classified under this heading. Taxes levied on the gross income of companies providing a specific service (e.g. transportation [including airport and other passenger taxes] insurance, banking, entertainment, restaurants, and advertising) are also classified under this heading.

73. Tax revenues from bank levies and payments to deposit insurance and financial stability schemes are also included here:

- Compulsory payments of stability fees, bank levies and deposit insurance should generally be treated as tax revenues where the payments are made to general government or supranational authorities and are allocated to the governments' consolidated or general funds so that the government is free to make immediate use of the money for the purposes that it chooses. This principle would apply regardless of whether the government is promising to make payments to guarantee the banks' customer deposits in some future contingency.
- If the compulsory payments are made to general government and placed in funds that are earmarked to be entirely channelled back to the sector of the economy that comprises the companies that are subject to the payment, they would still generally be treated as tax revenues on the grounds that the funds would be available for the government and would reduce its budget deficit, the fee is unrequited for an individual entity and the amounts raised could be unrelated to any eventual pay out to depositors or expenditure on wider support for the financial sector.

- Payments to made to the smaller long-standing schemes for insuring 'retail' deposits, where the payment levels are consistent with the costs of insurance should be classified as fee for service.
- Any payments which involve governments realising the assets of a failed institution or receiving a priority claim on its assets in liquidation in order to fund payments of compensation to customers for their lost deposits would be treated as a fee for a service as opposed to tax revenues.
- Compulsory payments that are made to funds operated outside the government sector and non-state institutions backed by the deposit takers and all payments to voluntary schemes should not be treated as tax revenues.
- Contributions made to the EU Single Resolution Fund are also included here and recorded under the supranational level of government in the country tables.

74. Excluded from this sub-heading are:

- a) taxes on services forming part of a general tax on goods and services (5110);
- b) taxes on electricity, gas and energy (5121 as excises);
- c) taxes on individual gains from gambling (1120 as taxes on capital gains of individuals and non-corporate enterprises) and lump-sum taxes on the transfer of private lotteries or on the permission to set up lotteries (5200);¹⁸
- d) taxes on cheques and on the issue, transfer or redemption of securities (4400 as taxes on financial and capital transactions);
- e) general taxes on turnover (5113).

5127 — Other taxes on international trade and transactions

75. This sub-heading covers revenue received by the government from the purchase and sale of foreign exchange at different rates. When the government exercises monopoly powers to extract a margin between the purchase and sales price of foreign exchange, other than to cover administrative costs, the revenue derived constitutes a compulsory levy exacted in indeterminate proportions from both purchaser and seller of foreign exchange. It is the common equivalent of an import duty and export duty levied in a single exchange rate system or of a tax on the sale or purchase of foreign exchange. Like the profits of fiscal monopolies and import or export monopolies transferred to government, it represents the exercise of monopoly powers for tax purposes and is included in tax revenues.

76. The sub-heading covers also the profits of export or import monopolies, which do not however exist in OECD countries, taxes on purchase or sale of foreign exchange, and any other taxes levied specifically on international trade or transactions.

5128 — Other taxes on specific goods and services

77. This item includes taxes on the extraction of minerals, fossil fuels and other exhaustible resources from deposits owned privately or by another government together with any other unallocable receipts from taxes on specific goods and services. Taxes on the extraction of exhaustible resources are usually a fixed amount per unit of quality or weight, but can be a percentage of value. The taxes are recorded when the resources are extracted. Payments from the extraction of exhaustible resources from deposits owned by the government unit receiving the payment are classified as rent.

5200 — Taxes on use of goods or on permission to use goods or perform activities

78. This sub-heading covers taxes which are levied in respect of the use of goods as distinct from taxes on the goods themselves. Unlike the latter taxes – reported under 5100 –, they are not assessed on the value of the goods but usually as fixed amounts. Taxes on permission to use goods or to perform activities are also included here, as are pollution taxes not based upon the value of particular goods. It is

sometimes difficult to distinguish between compulsory user charges and licence fees which are regarded as taxes and those which are excluded as non-tax revenues. The criteria which are employed are noted in §12–13.

79. Although the sub-heading refers to the ‘use’ of goods, registration of ownership rather than use may be what generates liability to tax, so that the taxes of this heading may apply to the ownership of animals or goods rather than their use (e.g., race horses, dogs and motor vehicles) and may apply even to unusable goods (e.g., unusable motor vehicles or guns).

80. Borderline cases arise with:

- a) taxes on the permission to perform business activities which are levied on a combined income, payroll or turnover base and, accordingly, are classified following the rules in §84;
- b) taxes on the ownership or use of property of headings 4100, 4200 and 4600. The heading 4100 is confined to taxes on the ownership or tenancy of immovable property and – unlike the taxes of 5200 – they are related to the value of the property. The net wealth taxes and taxes on chattels of 4200 and 4600 respectively are confined to the ownership rather than the use of assets, apply to groups of assets rather than particular goods and again are related to the value of the assets,

5210 — Recurrent taxes on use of goods and on permission to use goods or perform activities

81. The principal characteristic of taxes classified here is that they are levied at regular intervals and that they are usually fixed amounts. The most important item in terms of revenue receipts is vehicle licence taxes. This sub-heading also covers taxes on permission to hunt, shoot, fish or to sell certain products and taxes on the ownership of dogs, broadcast licence fees and taxes on the performance of certain services, provided that they meet the criteria set out in §12–13. The sub-divisions of 5210 are:

- user taxes on motor vehicles paid by households (5211);
- taxes on motor vehicles paid by others (5212); and
- other recurrent taxes (5213). This sub-heading covers business and professional licences paid by enterprises in order to obtain a licence to carry on a particular kind of business or profession when the levies are on a recurring basis. Licences such as taxi and casino licences are included. Dog licences and recurrent general licences for hunting, shooting and fishing where the right to carry out these activities is not granted as part of a normal commercial transaction are also included under this heading. Broadcast licence fees are included when the payer of the levy cannot opt out from making payments for public broadcast if one does not wish to watch or listen to public broadcast services (e.g. by declaring that one does not consume public broadcast services). Specific exemptions (for example, for elderly people) do not change the compulsory nature of the payment.

82. Excluded from sub-heading 5213 are:

- a) licences where the right to carry out such activities is granted as part of a normal commercial transaction (e.g., the granting of the licence is accompanied by the right to use a specific area which is owned by government);
- b) payments relating to the checks carried out by the government on the suitability and or safety of the business premises or equipment, or on the quality or standard of goods or services produced as a condition for granting such a licence. These payments are not unrequited and should be treated as payments for services rendered, unless the amounts charged for the licences are out of all proportion to the costs of the checks carried out by governments.

- c) broadcast licence fees if users can opt out from paying broadcast licence fees in the case that they do not wish to consume these services while not affecting the ability to consume private broadcast services.

5220 — Non-recurrent taxes on use of goods and on permission to use goods or perform activities

83. This section covers non-recurrent taxes levied on the use of goods or on permission to use goods or perform activities and taxes levied each time goods are used. It includes taxes levied on the emission or discharge into the environment of noxious gases, liquids or other harmful substances.

- Payments for tradable emission permits issued by governments under cap and trade schemes should be recorded here at the time the emissions occur. No revenue should be recorded for permits that governments issue free of charge. The accrual basis of recording means that there can be a timing difference between the cash being received by government for the permits and the time the emission occurs. In the national accounts, this timing gives rise to a financial liability for government during the period.
- Payments made for the collection and disposal of waste or noxious substances by public authorities should be excluded as they constitute a sale of services to enterprises.

84. Other taxes falling under heading 5200 that are not levied recurrently are also included here. Thus, once-and-for-all payments for permission to sell liquor or tobacco or to set up betting shops are included provided they meet the criteria set out in §12–13.

6000 — Other taxes

85. Taxes levied on a base, or bases, other than those described under headings 1000, 3000, 4000 and 5000, or on bases of which cannot be considered to be related to any one of these headings, are included here. Where taxes are levied on a multiple base and it is possible to estimate the receipts related to each base the separate amounts are included under the appropriate headings. If separate amounts cannot be estimated and it is known that most of the receipts are derived from one base, the whole of the receipts are classified according to that base. Otherwise, they are classified here. Other revenues included here are presumptive taxes not included elsewhere in the classification system, taxes on individuals in the form of a poll tax or capitation tax, stamp taxes not related to financial and capital transactions nor falling exclusively on a single category of transaction, expenditure taxes where personal deductions or exemptions are applied and unidentifiable tax receipts. A subdivision is made between taxes levied wholly or predominantly on business (6100) and those levied on others (6200).

A.6 Conciliation with National Accounts

86. This section of the tables provides a re-conciliation between the OECD calculation of total tax revenues and the total of all taxes and social contributions paid to general government as recorded in the country's National Accounts. Where the country is a member of the European Union (EU), the comparison is between the OECD calculation of total tax revenues and the sum of tax revenues and social contributions recorded in the combination of the general government and the institutions of the EU sectors of the National Accounts.

A.7 Memorandum item on the financing of social security benefits

87. In view of the varying relationship between taxation and social security contributions and the cases referred to in §40 to §46, a memorandum item collects together all payments earmarked for social security-

type benefits, other than voluntary payments to the private sector. Data are presented as follows (refer Table 5.39 of the Report):

- a) Taxes of 2000 series.
- b) Taxes earmarked for social security benefits.
- c) Voluntary contributions to the government.
- d) Compulsory contributions to the private sector.

Guidance on the breakdown of (a) to (d) above is provided in §40 to §46.

A.8 Memorandum item on identifiable taxes paid by government

88. Identifiable taxes actually paid by government are presented in a memorandum item classified by the main headings of the OECD classification of taxes. In the vast majority of countries, only social security contributions and payroll taxes paid by government can be identified. These are, however, usually the most important taxes paid by governments (refer to Table 5.40 of the Report).

A.9 Relation of OECD classification of taxes to national accounting systems

89. A system of national accounts (SNA) seeks to provide a coherent framework for recording and presenting the main flows relating respectively to production, consumption, accumulation and external transactions of a given economic area, usually a country or a major region within a country. Government revenues are an important part of the transactions recorded in SNA. The final version of the 2008 SNA was jointly published by five international organisations: the United Nations, the International Monetary Fund, the European Union, the Organisation for Economic Co-operation and Development, and the World Bank in August 2009. The *System* is a comprehensive, consistent and flexible set of macroeconomic accounts. It is designed for use in countries with market economies, whatever their stage of economic development, and also in countries in transition to market economies. The important parts of the SNA's conceptual framework and its definitions of the various sectors of the economy have been reflected in the OECD's classification of taxes.

90. There are, however, some differences between the OECD classification of taxes and SNA concepts that are listed below. They arise because the aim of the former is to provide the maximum disaggregation of statistical data on what are generally regarded as taxes by tax administrations.

- a) OECD includes compulsory social security contributions paid to general government in total tax revenues. Imputed and voluntary contributions plus those paid to private funds are not treated as taxes (§9 and §11 above);
- b) there are different points of view on whether or not some levies and fees are classified as taxes (§12 and §13 above);
- c) OECD excludes imputed taxes or subsidies resulting from the operation of official multiple exchange rates or from the central bank paying a rate of interest on required reserves that is different from other market rates;
- d) there are differences in the treatment of non-wastable tax credits

91. As noted in §1 and §2, headings 1000 to 6000 of the OECD list of taxes cover all unrequited payments to general government or to a supranational authority, other than compulsory loans and fines. Such unrequited payments including fines, but excluding compulsory loans can be obtained from adding together the following figures in the 2008 SNA

- value-added type taxes (D.211);

- taxes and duties on imports, excluding VAT (D.212);
- export taxes (D.213);
- taxes on products, excluding VAT, import and export taxes (D.214);
- other taxes on production (D.29);
- taxes on income (D.51);
- other current taxes (D.59);
- actual social contributions (D.611 and D613), excluding voluntary contributions and payments to employment-related schemes that are not social security schemes
- capital taxes (D.91).

A.10 The OECD classification of taxes and the International Monetary Fund (GFS) system

92. The coverage and valuation of tax revenues in the GFS system and the 2008 SNA are very similar. Therefore, the differences between the OECD classification and that of the 2008 SNA (see §90 above) also apply to the GFS. In addition, the International Monetary Fund subdivides the OECD 5000 heading into section IV (Domestic Taxes on Goods and Services) and section V (Taxes on International Trade and Transactions). This reflects the fact that while the latter usually yield insignificant amounts of revenue in OECD countries, this is not the case in many non-OECD countries.

A.11 Comparison of the OECD classification of taxes with other international classifications

93. The table below describes an item by item comparison of the OECD classification of taxes and the classifications used in the following:

- System of National Accounts (2008 SNA);
- European System of Accounts (2010 ESA);
- IMF Government Finance Statistics Manual (GFSM2014).

94. These comparisons represent those that would be expected to apply in the majority of cases. However in practice some flexibility should be used in their application. This is because in particular cases, countries can adopt varying approaches to the classification of revenues in National Accounts.

	OECD Classification	2008 SNA	2010 ESA	GFSM2014
1000	Taxes on income, profits and capital gains			
1100	Individuals			
1110	Income and profits	D51-8.61a	D51A	1111
1120	Capital gains	D51-8.61c, d	D51C, D	1111
1200	Corporations			
1210	Income and profits	D51-8.61b	D51B	1112
1220	Capital gains	D51-8.61c	D51C	1112

A.12 Attribution of tax revenues by sub-sectors of general government

95. The OECD classification requires a breakdown of tax revenues by sub-sectors of government. The definition of each sub-sector and the criteria to be used to attribute tax revenues between these sub-sectors are set out below. They follow the guidance of the 2008 SNA and GFSM 2014.

Sub-sectors of general government to be identified

a) Central government

96. The central government sub-sector includes all governmental departments, offices, establishments and other bodies which are agencies or instruments of the central authority whose competence extends over the whole territory, with the exception of the administration of social security funds. Central government therefore has the authority to impose taxes on all resident and non-resident units engaged in economic activities within the country.

b) State, provincial or regional government

97. This sub-sector consists of intermediate units of government exercising a competence at a level below that of central government. It includes all such units operating independently of central government in a part of a country's territory encompassing a number of smaller localities, with the exception of the administration of social security funds. In unitary countries, regional governments may be considered to have a separate existence where they have substantial autonomy to raise a significant proportion of their revenues from sources within their control and their officers are independent of external administrative control in the actual operation of the unit's activities.

98. At present, federal countries comprise the majority of cases where revenues attributed to intermediate units of government are identified separately. Colombia and Spain are the only two unitary countries in this position. In the remaining unitary countries, regional revenues are included with those of local governments.

c) Local government

99. This sub-sector includes all other units of government exercising an independent competence in part of the territory of a country, with the exception of the administration of social security funds. It encompasses various urban and/or rural jurisdictions (e.g., local authorities, municipalities, cities, boroughs, districts).

d) Social security funds

100. Social security funds form a separate sub-sector of general government. The social security sub-sector is defined in the 2008 SNA by the following extracts from paragraphs 4.124 to 4.126 and 4.147:

"Social security schemes are social insurance schemes covering the community as a whole or large section of the community that are imposed and controlled by government units. The schemes cover a wide variety of programmes, providing benefits in cash or in kind for old age, invalidity or death, survivors, sickness and maternity, work injury, unemployment, family allowance, health care, etc. There is not necessarily a direct link between the amount of the contribution paid by an individual and the benefits he or she may receive." (Paragraph 4.124).

"When social security schemes are separately organised from the other activities of government units and hold their assets and liabilities separately from the latter and engage in financial transactions on their own account they qualify as institutional units that are described as social security funds." (Paragraph 4.125).

"The amounts raised, and paid out, in social security contributions and benefits may be deliberately varied in order to achieve objectives of government policy that have no direct connection with the concept of

social security as a scheme to provide social benefits to members of the community. They may be raised or lowered in order to influence the level of aggregate demand in the economy, for example. Nevertheless, so long as they remain separately constituted funds, they must be treated as separate institutional units in the SNA. (Paragraph 4.126).

“The social security funds sub-sector (of general government) consists of the social security funds operating at all levels of government. Such funds are social insurance schemes covering the community as a whole or large section of the community that are imposed by government units.” (Paragraph 4.147).

101. This definition of social security funds is followed in the OECD classification with the two following exceptions which are excluded

- Schemes imposed by government and operated by bodies outside the general government sector, as defined in §3 of this manual; and
- Schemes to which all contributions are voluntary.

Supranational Authorities

102. This sub-sector covers the revenue-raising operations of supra-national authorities within a country. In practice, the only relevant supranational authority in the OECD area is that of the institutions of the European Union (EU). Tax revenues collected by member countries and paid to the EU are included in the *Revenue Statistics* at the supranational level of government. Income taxes and social security contributions collected by European Institutions and paid by European civil servants who are resident of EU member countries should not be included.

Criteria to be used for the attribution of tax revenues

103. When a government collects taxes and pays them over in whole or in part to other governments, it is necessary to determine whether the revenues should be considered to be those of the collecting government which it distributes to others as grants, or those of the beneficiary governments which the collecting government receives and passes on only as their agent. The criteria to be used in the attribution of revenues are set out in §104 to §107 which replicate paragraphs 3.70 to 3.73 from the 2008 SNA.

104. In general, a tax is attributed to the government unit that

- a) exercises the authority to impose the tax (either as a principal or through the delegated authority of the principal),
- b) has final discretion to set and vary the rate of the tax

105. Where an amount is collected by one government for and on behalf of another government, and the latter government has the authority to impose the tax, and set and vary its rate, then the former is acting as an agent for the latter and the tax is reassigned. Any amount retained by the collecting government as a collection charge should be treated as a payment for a service. Any other amount retained by the collecting government, such as under a tax-sharing arrangement, should be treated as a current grant. If the collecting government was delegated the authority to set and vary the rate, then the amount collected should be treated as tax revenue of this government.

106. Where different governments jointly and equally set the rate of a tax and jointly and equally decide on the distribution of the proceeds, with no individual government having ultimate overriding authority, then the tax revenues are attributed to each government according to its respective share of the proceeds. If an arrangement allows one government unit to exercise ultimate overriding authority, then all of the tax revenue is attributed to that unit.

107. There may also be the circumstance where a tax is imposed under the constitutional or other authority of one government, but other governments individually set the tax rate in their jurisdictions. The proceeds of the tax generated in each respective government's jurisdiction are attributed as tax revenues of that government.

108. The levies paid by the member states of the EU take the form specific levies which include

- a)* custom duties and levies on agricultural goods (5123),
- b)* gross monetary compensation accounts (5123 if relating to imports and 5124 if relating to exports);
- c)* contributions to the Single Resolution Fund (5126); and
- d)* Steel, coal, sugar and milk levies (5128).

109. The custom duties collected by member states on behalf of the EU are recorded

- on a gross of collection fee basis;
- using figures adjusted so that duties are shown on a 'final destination' as opposed to a 'country of first entry' basis where such adjustments can be made. These adjustments concern in particular duties collected at important (sea) ports. Although the EU duties are collected by the authorities of the country of first entry, when possible these duties should be excluded from the revenue of the collecting country and be included in the revenue of the country of final destination

110. These are the specific EU levies that most clearly conform to the attribution criterion described in §102 above. Consequently, these amounts are footnoted as a memorandum item to the EU member state country tables (in Chapter 5) and are shown as supranational revenues against each of the tax headings identified in §108.

Notes

- ¹ References in this OECD Interpretative Guide to Sections or Parts of “this Report” refer to OECD (2023), *Revenue Statistics 2023*, OECD Publishing, Paris.
- ² All references to SNA are to the 2008 edition.
- ³ See section A.12 of this guide for a discussion of the concept of agency capacity.
- ⁴ It is usually possible to identify amounts of social security contributions and payroll taxes, but not other taxes paid by government.
- ⁵ If, however, a levy which is considered as non-tax revenue by most countries is regarded as a tax — or raises substantial revenue — in one or more countries, the amounts collected are footnoted at the end of the relevant country tables, even though the amounts are not included in total tax revenues.
- ⁶ Names, however, can frequently be misleading. For example, though a passport fee would normally be considered a non-tax revenue, if a supplementary levy on passports (as is the case in Portugal) were imposed in order to raise substantial amounts of revenue relative to the cost of providing the passport, the levy would be regarded as a tax under 5200.
- ⁷ A more detailed explanation of this distinction can be found in the special feature, ‘Current issues in reporting tax revenues’, in the 2001 edition of *Revenue Statistics*.
- ⁸ Sometimes the terms ‘non-refundable’ and ‘refundable’ are used, but it may be considered illogical to talk of ‘refundable’ when nothing has been paid.
- ⁹ A different treatment, however, is accorded to non-wastable tax credits under imputation systems of corporate income tax (§37–39).
- ¹⁰ This is not strictly a true tax expenditure in the formal sense. Such tax expenditures require identification of a benchmark tax system for each country or, preferably, a common international benchmark. In practice it has not been possible to reach agreement on a common international benchmark.
- ¹¹ Unless based on the profit made on a sale, in which case they would be classified as capital gains taxes under 1120 or 1220.
- ¹² In some countries the same legislation applies to both individual and corporate enterprises for particular taxes on income. However, the receipts from such taxes are usually allocable between individuals and enterprises and can therefore be shown in the appropriate sub-heading.
- ¹³ For example, “... sufficiently self-contained and independent that they behave in the same way as corporations... (including) keeping a complete set of accounts” (2008 SNA, section 4.44).
- ¹⁴ In Canada — a country also referred to as having an imputation system — the (wastable) tax credit for the shareholder is in respect of domestic corporation tax deemed to have been paid whether or not a corporation tax liability has arisen. As there is no integral connection between the corporation tax liability

and the credit given against income tax under such systems, these credits for dividends are treated, along with other tax credits, on the lines described in §26.

¹⁵This may also apply where a scheme for government employees existed prior to the introduction of a general social security scheme.

¹⁶In the 2008 SNA, these are regarded as capital transfers and not as taxes (see section A.8).

¹⁷This is the system by which the European Union adjusts for differences between the exchange rates used to determine prices under the Common Market Agricultural Policy and actual exchange rates. Payments under the system may relate to imports or exports and where these amounts are separately identifiable they are shown under the appropriate heading (5123 or 5124). In this Report, these amounts are shown gross (i.e. without deducting any subsidies paid out under the MCA system).

¹⁸Transfers of profits of State lotteries are regarded as non-tax revenues (see also §68).

Revenue Statistics in Latin America and the Caribbean

1990-2022

This report compiles comparable tax revenue statistics over the period 1990-2022 for 27 Latin American and Caribbean (LAC) countries. It provides harmonised data on the level and structure of tax revenues based on the OECD classification of taxes, thereby enabling comparison of national tax systems on a consistent basis, both across the region and with other economies globally. The report includes two special features: one examines fiscal revenues from non-renewable natural resources in the LAC region in 2022 and 2023, while the second calculates equivalent fiscal pressure in the LAC region. The publication is jointly undertaken by the OECD Centre for Tax Policy and Administration, the OECD Development Centre, the Inter-American Center of Tax Administrations (CIAT), the Economic Commission for Latin America and the Caribbean (UN-ECLAC), and the Inter-American Development Bank (IDB).
