Agreement Profiles

These Profiles complement the analysis presented in the Trade and Integration Monitor 2014 – Facing Headwinds – Policies to support a trade recovery in the post-crisis era.

Agreement Profiles provides a concise and updated overview of regional integration by presenting information on twenty-four preferential trade agreements implemented in Latin America and the Caribbean. Each Profile presents in a standardized format data the members, dates of signature and entry into force, agreement trade, tariff liberalization, overlapping agreements in the regional spaghetti bowl, tariff rate quotas, rules of origin, top traded products and top excluded goods, defined by Chapter of the Harmonized System.

Data Sources and Methodological Notes

Trade agreement data from INTrade. **Intra-agreement trade flows** based on figures from INTrade/DataINTAL.¹

Percent of tariff lines duty free calculations are based on INTrade. **Percent of trade duty free** calculations are based on the structure of trade in 2009. Where agreement tariff elimination schedules were negotiated in a nomenclature different from the 2009 trade figures, the year in which trade in a given subheading is considered duty free is the maximum of the duty-free years of all of the tariff lines from the agreement annex that correlate to that subheading. Thus, the methodology gives a conservative estimate of when the tariffs on that trade will be eliminated.

Overlapping trade agreements. The map indicates which additional countries are covered by FTAs with one or more of the members of the FTA in question. Members of the agreement in question are colored light blue; countries that have FTAs with any, but not all, of the FTA members are colored dark blue; and countries that also have FTAs with all members of the FTA in question are colored medium blue.

Tariff rate quotas and rules of origin qualification criteria based on INTrade. Percentages of origin qualification criteria do not add up to 100 percent because the rule for a given product may apply more than one criterion simultaneously. Where the rules offer more than one alternative method for demonstrating origin, the criteria of the first alternative is used.

Principal products traded intra-agreement. The Harmonized System (HS) chapter with the greatest amount of intraregional exports is identified. **Top excluded chapter.** The HS chapter with the greatest amount of trade in products excluded from tariff liberalization (or phased out after 2020) is identified. The value in parenthesis is the value of trade in excluded products (not the entire HS chapter).

¹ Notes: Trade data for Barbados, Grenada, Saint Lucia, Saint Vincent and the Grenadines, Suriname and Trinidad and Tobago are from UN COMTRADE and CARICOM Stats for some years. Data for countries outside the Latin American and the Caribbean region are from UN COMTRADE and the IMF Direction of Trade Statistics.

Use of the phrase “Taipei China”, or of the ISO country code “TWN”, does not in any way reflect a position by the Bank or any of its member countries regarding issues of national sovereignty or diplomatic recognition.
